Catalog 2014-2015

Information, Policies, Programs, Courses, and Faculty of the

Benjamin Franklin
Institute of Technology

41 Berkeley Street
Boston, Massachusetts 02116
Telephone: 617.423.4630
Fax: 617.482.3706
Web: http://www.bfit.edu
The BENJAMIN FRANKLIN INSTITUTE OF TECHNOLOGY reserves the right, in its sole judgment, to make changes of any nature in its programs, calendar, or academic schedule whenever it is deemed necessary or desirable including changes to course content, the re scheduling of classes with or without extending the academic term, canceling of scheduled classes and other academic activities, in any such case giving such notice thereof as is reasonably practicable under the circumstances. This catalog contains current information regarding the calendar, admission, degree requirements, fees, regulations, and course offerings. The policy of BFIT is to give advance notice of change, whenever possible, to permit adjustment. However, BFIT reserves the right to make changes at any time when it is deemed advisable. Requests for the College’s updated financial statements should be directed to the President’s Office at (617)-588-1569.

Equal Opportunity Policy

The Benjamin Franklin Institute of Technology policy prohibits discrimination on the basis of race, creed, color, religion, national origin, ancestry, sex, age, marital status, veteran status, political belief or affiliation, criminal record (applications only), COBRA check results, sexual or physical disability, pregnancy, retaliation, sexual harassment, sexual orientation, gender identity or expression, and genetic information and any other class of individuals protected from discrimination under state and federal law. This policy extends to all rights, privileges, programs, and activities including admission, employment, financial assistance, and educational programs.

Inquiries concerning the application of these laws to BENJAMIN FRANKLIN INSTITUTE OF TECHNOLOGY should be addressed to the Equal Employment Opportunity/Affirmative Action Officer, 42 Berkeley Street, Boston, MA 02108.

Family Educational Rights and Privacy Policy

BFIT complies with the Family Educational Rights and Privacy Act, also known as the Buckley Amendment. This act protects the rights of the student in matters of access to and release of information contained in the student’s records. Questions regarding this policy should be referred to the Registrar’s Office.

Tuition:
Associate Degree and Certificate Programs $16,950 per year,
Bachelor’s program $18,190

Financial Aid:
Federal, State and institutional aid available

Location: Boston’s South End neighborhood

Accreditation

New England Association of Schools and Colleges (NEASC)
Benjamin Franklin Institute of Technology is accredited by the New England Association of Schools and Colleges, a non-governmental, nationally recognized organization that accredits institutions of higher education.

Accreditation of an institution by the New England Association of Schools and Colleges indicates that it meets or exceed criteria for the assessment of institutional quality, periodically applied through a rigorous review process. An accredited school or college is one that has the resources necessary to achieve its stated purposes through appropriate educational programs, is substantially doing so, and gives reasonable evidence that it will continue to do so in the foreseeable future.

Accreditation by the New England Association is not partial, but applies to the institution as a whole. As such, it is not a guarantee of the quality of every course or program offered, or the competence of individual graduates. Rather, it provides reasonable assurance about the quality of opportunities available to students who attend the institution.

Inquiries regarding the status of an institution’s accreditation by the New England Association of Schools and Colleges should be directed to:

National Automotive Technicians Education Foundation (NATEF)

The Automotive Technology Program at the Benjamin Franklin Institute of Technology is accredited by the National Automotive Technicians Education Foundation, an independent, non-profit organization with a single mission: To evaluate technician training programs against standards developed by the automotive industry and recommend qualifying programs for NATEF accreditation.

National Automotive Technicians Education Foundation; 101 Blue Seal Drive, SE, Suite 101; Leesburg, VA 20175; (703) 669-6650, Fax: (703) 669-6725; http://www.natef.org

Commission on Opticianry Accreditation (COA)
The Opticianry program has been accredited by the Commission on Opticianry Accreditation since 2013.
The Commission on Opticianry Accreditation (COA), a not-for-profit agency, accredits Opticianry education in the United States.
The mission of the Commission on Opticianry Accreditation is to foster excellence in opticianry education by setting standards, assessing educational effectiveness, and identifying those academic programs that meet the standards, in order to aid programs to produce competent graduates who will provide professional services to the public.
Scope of accreditation: COA accredits two-year Opticianry degree programs and one-year ophthalmic laboratory technology certificate programs in the United States and Canada that are sponsored by post-secondary institutions accredited by agencies recognized by the Department of Education or CHEA.
Recognition: The COA is recognized by the Council on Higher Education Accreditation (CHEA), http://www.chea.org/.
Commission on Opticianry Accreditation; PO Box 5912, Canton NY, 13617; (703) 468-0566; http://www.coaaccreditation.com/
A Message from the President

Welcome to Benjamin Franklin Institute of Technology (BFTI)!

College is a big step on the path to success in life, and choosing the right one can speed your progress along that path. I encourage you to consider accessibility, affordability, programs, and success rate when deciding where you will invest your time and money. A good choice is a college that provides job-ready skills that employers are looking for.

BFTI prepares its students for work and connects them to good paying jobs. After completing a certificate or degree, graduates are equipped with technical savvy and 21st century skills like communication, critical thinking, diagnostic problem solving, professionalism, and teamwork. They are ready to keep learning on the job or in future higher education. We are plugged in to our community, providing support in and out of the classroom and giving students opportunities to get connected through service learning, internships, guest speakers, career fairs, and more.

We have hands-on education in a range of technology fields, from biomedical devices to zero-emission vehicles. CNC machines to contact lenses. We work with the companies who hire in these fields to keep our content current and to keep you competitive. Our people are dedicated to helping you achieve your educational goals, and we have the systems that can make it happen.

This catalog tells about our courses, programs, and policies. It has information on financial aid and student services and identifies our faculty and other staff. It’s one resource to guide you as you begin your journey at this college and continue your education here.

Since 1968, BFTI has helped thousands put their commitment, effort, and talent into action as technicians, small-business owners, and citizens. We continue to pursue this goal of excellence by helping you be your best.

Sincerely,

Anthony Benoit,
President

Policies and Disclaimers

Equal Opportunity Policy
The Benjamin Franklin Institute of Technology policy prohibits discrimination on the basis of race, creed, color, religion, national origin, ancestry, sex, age, marital status, veteran status, political belief or affiliation, criminal record (applications only), CORI check results, mental or physical disability, pregnancy, retaliation, sexual harassment, sexual orientation, gender identity or expression and genetic information and any other class of individuals protected from discrimination under state and federal law.

This policy extends to all rights, privileges, programs, and activities, including admission, employment, financial assistance, and educational programs, and is required by federal law including Title IX of the Educational Amendments of 1972, and section 504 of the Rehabilitation Act of 1973, and the regulations thereunder. Inquiries concerning the application of these laws to Benjamin Franklin Institute of Technology should be addressed to the Equal Employment Opportunities/Affirmative Action Officer, who is the Human Resources Director at 41 Berkeley Street, Boston, MA 02116.

Family Educational Rights and Privacy Policy
The Benjamin Franklin Institute of Technology complies with the federal Family Educational Rights and Privacy Act. This law protects the rights of the student in matters of access to, and release of, information contained in the student’s educational records. For more information refer to full policy in this catalog.

Changes to this Catalog
The information in the printed version of this catalog was current as of July 1, 2014. The Benjamin Franklin Institute of Technology reserves the right to update, modify, and change calendars, degree requirements, course offerings, course descriptions, regulations, tuition and fees, and other information as necessary. The College will endeavor to provide timely notice of these changes to the persons affected. An updated version of this catalog can be found online at www.bfit.edu.

History and Mission

History
The Benjamin Franklin Institute of Technology is a two-year college with a rich history built on tradition and innovation. One of the oldest technical colleges in New England, BFIT owes its existence to Benjamin Franklin, who in the 1789 codicil to his will bequeathed a gift to help educate “the inhabitants of the Town of Boston.” His desire was to equip young people with quality technical skills, believing that “good apprentices are most likely to make good citizens.” In 1906, aided by an additional gift from the industrialist Andrew Carnegie and land donated by the city of Boston, the managers of the Franklin Fund decided that a technical college would best accomplish Franklin’s original purpose. Benjamin Franklin Institute of Technology opened its doors to students in 1908. Since then, BFIT has graduated more than 85,000 students, all of whom have benefited from its unique approach to technical education. BFIT remains Dr. Franklin’s living legacy to Boston.

A more extensive history of BFIT can be found on our website at www.bfit.edu.

Mission Statement
The Benjamin Franklin Institute of Technology offers education to students pursuing career-based paths. The College strives to develop technical and professional skills as well as individual values that help to create a foundation for success, civic responsibility and life-long learning. The College adheres to the principles put forth by our benefactor Benjamin Franklin in his writings about education and citizenship.

Vision Statement
Benjamin Franklin Institute of Technology will be a best-in-its-class college that provides a supportive learning environment and offers innovative, practical and entrepreneurial education resulting in career-ready, productive and civically-engaged citizens.

Institutional Values
We value our diverse community and the fostering of a supportive learning environment. We are committed to creating opportunity by working closely with industry and community partners to prepare our students for lifelong learning in an increasingly interdependent world. Our academic programs and co-curricular efforts reflect our commitment to the fundamental principles of an educated person. We value the following skills and attributes and actively promote their development through college-wide initiatives, so that each student:

- Possesses the technical skills to enter the workforce or go on to further education
- Demonstrates professionalism through leadership, a strong work ethic, and teamwork
- Communicates effectively both professionally and personally
- Utilizes critical thinking and various approaches to problem solving
- Possesses the lifelong skills to locate, evaluate and use information effectively
- Understands the impact of sustainable development
- Is globally and ethically responsible and civically engaged
Governance

The Benjamin Franklin Institute of Technology is governed by an independent Board of Trustees reflective of the Boston area citizenry desired by Benjamin Franklin in his original bequest to the City of Boston. The Board presently has 16 members in addition to its ex-officio members, the Mayor of Boston, and the President of the College. As well, the Board is aided by the continued service of its Trustee Emeriti, distinguished former members of the Board who continue their participation in many aspects of the College governance.

The Board of Trustees meets on a quarterly basis at the College. In between the Trustee meetings, an elected Executive Committee serves in the Board’s stead for needed decision-making and guidance.

Each Trustee is asked to serve on at least two Board committees. These committees convene and engage with the College during their own committee meetings taking advantage of the specific skills possessed by the individual Trustees. Committees include Finance, Investment, Audit, Facilities & IT, Strategic Planning, Development, Academic, and Governance.

Five members of the Trustees are elected as officers of the Board during the Annual Meeting. These are the Chair, two Vice Chairs, Treasurer, and Clerk.

Membership of the Executive Committee and other committees is also determined at the June meeting.

The President of the College is a voting member of the Board and is responsible for the management and implementation of the policies and directives of the Board. He has a strong consultative relationship with the Chair, the Executive Committee and other Trustees. On a day-to-day basis, he works closely through his Administrative Council that consists of his management team, the Chief Financial Officer, the Dean of Academic Affairs, the Dean of Student Services, the Associate Dean of Admissions & Student Financial Services, the Director of Human Resources, the Director of Communications, and the Chief Development Officer.

Shared Governance

The academic department chairs meet regularly with the Dean of Academic Affairs. The faculty is involved in curriculum matters, personnel matters, and faculty development through four standing committees:

- A faculty academic advisory committee (FAAC) advises on academic and curriculum matters.
- A faculty senate fosters cooperation and communication among faculty and administration.
- A faculty development committee (FDC) promotes professional development and in-service training.
- A faculty promotion committee (FPC) reviews faculty portfolios for academic promotion.

Facilities

The College includes laboratory, classroom, student, and office space on its three-acre campus in the South End neighborhood of Boston. The campus centers on the Franklin Union building, an historic 1908 structure designed specifically for technical education.

For its approximately 500 students, BFIT provides 12 general classrooms, 28 specialized laboratories, a library, an Academic Success Center, an 800 seat auditorium, a student lounge, and a school store. The central place on campus is the historic, high-ceilinged lobby where students study, talk, and meet with their teachers.

Laboratories

Since effective technical education focuses on experimentation and hands-on work, BFIT’s facilities center on these twenty-nine labs:

- Alternative Energy Lab
- Alternative Fuels Vehicles Lab
- Automotive Brakes Lab
- Automotive Engines Lab
- Automotive Repair Lab
- Automotive Transmissions Lab
- Automotive Electric Lab
- Automotive Diagnostics Lab
- Automotive Chassis Lab
- Building Technology Design Lab
- Computer Networking Lab
- Computer Programming Labs (5)
- Computer Diagnostics Lab
- Computer Aided Design (CAD) Labs (2)
- Electrical Electro-Mechanical Lab
- Electrical Photovoltaic & Renewable Energy Lab
- Electrical Wiring Methods Lab
- Electronics Lab
- HVAC&R Labs (3)
- Mechanical Engineering Lab
- Opticianry Labs (3)
- Physics Lab
Admissions Procedure and Criteria

Application Deadlines
Applications are reviewed on a rolling basis. The priority deadline for the Fall semester is May 1 and for the Spring semester is December 1.

Admission Requirements
Because the intensity of the studies at the Benjamin Franklin Institute of Technology varies from program to program, the level of high school preparation for admission varies accordingly.

- Applicants to the associate degree programs in electrical technology, and engineering technologies (electronic, biomedical, computer, and mechanical) should have completed high school: four full-year courses in English, at least four years in mathematics through Algebra II and/or up to pre calculus, and at least one course in science.
- Applicants to the associate degree programs in automotive, building technology and design, computer technology, construction management, health information technology, Opticianry, and technology business and management, should have completed in high school: four full-year courses in English, at least three years in mathematics, and at least one course in science.
- Applicants to the certificate programs in automotive, HVAC&R, ophthalmic assisting and practical electricity should have undertaken high school courses that reflect satisfactory development of basic English, mathematics, and science or technical skills.
- Applicants to the automotive technology program must have correttable vision and hearing, an ability to stand for long periods, the ability to lift 50 pounds, and, for continuation into the second year of the program, a valid driver’s license. These requirements stem from the machinery, repair equipment, and running engines encountered in the automotive laboratories and shops.

- Applicants to the Bachelor of Science degree programs must have earned a qualifying associate degree from BFIT or another accredited college, with a minimum average of “C” in all English Composition courses. Applicants should be aware of the terms of articulation agreements with other two-year colleges. Failure to meet all of the terms as outlined in the articulation agreement may result in additional coursework prior to matriculation in the Bachelor of Science program.

How to Apply for Admission
All applicants must complete the Application for Admission, available in paper or online at www.bfit.edu. The application must be submitted with a $25 processing fee to the Office of Admissions. Application fees are not refundable. Students can request a waiver of the application fee by contacting the admissions office.

Students may also submit the Common Application which can be obtained online at www.commonapp.org. Official high school or secondary school records or transcripts, or official GED scores, must be submitted before the application can be processed. High school guidance counselors or records offices may send official copies of transcripts to BFIT. Students may need to schedule a formal interview as part of the admissions process.

In addition, students will need to submit one letter of recommendation from a teacher, high school guidance counselor, or an employer and it is recommended that students submit a personal statement as described in the application for admission. Upon enrollment, students must submit a final high school or secondary school transcript that states their graduation date and immunization records as mandated by the Commonwealth of Massachusetts.

Interviews are not required of all students, but are strongly encouraged. Students that do not possess a history of academic strength as demonstrated through their academic records may be required to have an interview with an admissions staff member prior to an admissions decision being rendered.

Applications are processed on a rolling basis, with applicants notified of their admission status shortly after all required documents have been received. All offers of conditional admission require the applicant’s successful completion of the items listed in his or her acceptance letter. Official final secondary school transcripts are required in order to complete an applicant’s file and initiate the registration process.

Standardized Testing
Applicants are strongly encouraged to take the Scholastic Aptitude Test (SAT) of the College Board or the American College Testing (ACT) Assessment.

Our CEEB code is 3394. Official test scores should be submitted to the Admissions Office if available to help support the strength of a student’s application materials. Once students are accepted to the College, they will be asked to take BFIT’s placement tests to determine their level of proficiency in English and mathematics so that they are appropriately scheduled for classes during their first semester of enrollment.

Applicants who are native speakers of other languages must demonstrate English proficiency for entrance to all programs.

* Please note that all students who are offered admission to BFIT will be required to submit a $100 tuition deposit to secure their spot in the entering class. Students that are requesting on-campus housing must submit an additional $150 housing deposit to secure housing.
September Admission
Applications for all programs are accepted for September enrollment.

January Admission
Applicants for January enrollment are considered for admission on a program-by-program basis as not all programs may be available for students to start during the January semester.

Transfer Students and Advanced Standing Credit
Students who have completed studies at another accredited college or university and wish to enroll at BFIT must meet all entrance requirements. They must also submit an official transcript of their academic record from all colleges previously attended. Official final secondary school transcripts or equivalent are required in order to complete an applicant’s file and initiate the registration process. Prospective students that have earned an associate degree from a regionally accredited college or university will only need to supply college transcripts with their application for admissions. The College also awards advanced standing credit to students from select high schools where articulation agreements exist. For a complete listing of the high school advanced standing articulation agreements, visit the College’s Admissions webpage.

Credit will be awarded for work completed at other accredited colleges that is equivalent in content and credit hours to BFIT courses and in which at least a grade of “C” was earned. The Dean of Academic Affairs must approve all requests for advanced standing credit on recommendation of the appropriate Department Chair. Transfer students must complete at least 51% of their program’s courses at BFIT.

Advanced Placement Credit
Students who have taken Advanced Placement classes and have taken the AP Exam offered through the College Board may be eligible for advanced standing credit. For a complete list of AP Exams and scores eligible for college-level credit please visit the College’s Registrar webpage.

Placement Policy
Students admitted to BFIT are required to take a placement assessment. This assessment is used by the College’s placement committee to determine a student’s skill level in a specific subject matter and determine the most appropriate place for them to begin at BFIT. Students take the placement exam for mathematics and English. The math assessment consists of two adaptive sections (Arithmetic and Algebra) which are taken via an online service called Accuplacer. Students who have taken an ESL course before, or who are non-native English speakers, are also required to take an ESL reading test via Accuplacer. The other English test consists of a reading and writing exercise provided by BFIT. After all placement sessions, students will have a brief academic consultation with a placement proctor. The proctor will discuss where students were placed and what classes they will be taking, from their first semester to their last. Students are allowed one retest to improve their math scores. Tutoring is available at certain placement sessions and students are encouraged to study online using Accuplacer practice tests and other free online services as recommended by your admissions counselor.

Students who have Advanced Placement (AP) credit or have earned college credits in English and/or mathematics may be exempt from taking the placement assessment. (Please see the AP policy, college credit transfer policy, and speak with an admissions counselor for more details.)

Students who would like accommodations for placement testing should tell their admission counselor when they sign up for testing. They will also need to provide clinical documentation of any disability to the Assistant Director of Student Success before their test date. Admissions will contact the Placement Coordinator and the Assistant Director of Student Success ahead of time to see if appropriate accommodations can be arranged. Typical accommodations include providing a separate testing site and/or providing a reader. Students requesting the use of a calculator are encouraged to take the test without one; the placement coordinator will take their request into consideration when analyzing the results. Students may have the option of retesting with a calculator at a later date. Placement testing is untimed, so students can return if they need additional time to complete the assessment.

Readmission Policy
POLICY
Students who have voluntarily left or been dismissed from Benjamin Franklin Institute of Technology for at least one semester and desire to reenter the program must complete the reentry form and receive the approval of the Dean of Academic Affairs and the student’s respective program chair. The reentry form is available online or from the Registrar’s Office. Readmission will be granted on a space-available basis and is not guaranteed. Any prior balance owed to the College must be paid in full before reentry will be considered.

If the student has been away from the college for at least three semesters, the student must apply for readmission with the admissions office and be subject to the admission and programmatic requirements of the current catalog.

PROCEDURE
Benjamin Franklin Institute of Technology will employ two different enrollment statuses to students who are readmitted to the College, depending upon the length of absence.
Reentered – This status will be employed if a student misses at least one or two complete semesters of classes. Students who withdraw mid-term and register for classes the following term will remain classified as Continuing Students.

Students who desire to reenter the Benjamin Franklin Institute of Technology should be directed to the Registrar’s Office to complete the readmission form which can be found on the College’s Registrar webpage. The Registrar’s Office will review the student’s academic standing and will then register the student for courses where appropriate. If a student is not in good academic standing, the Registrar’s Office will refer the student to the appropriate offices before registering the student for courses. The registrar will assign this student with the enrollment status of “reentered.”

Reenrolled – This status will be employed for a student who has missed three or more complete semesters of classes.

Students seeking to reenroll after missing three or more complete semesters should be directed to the admissions department. Admissions will direct the student through the admissions process. During this process, the admissions counselor, in consultation with the Registrar’s Office, will review the academic standing of the student before rendering an admissions decision. Upon acceptance and subsequent enrollment, the Registrar will update the student’s status to Reenrolled. Students reenrolling the program will continue to be counted in the cohort to which they initially entered.

In the event of a question, the Registrar shall be the final determiner as to whether a student is classified as a reentered or reenrolled status.

Part-Time Students

Part-time students may enroll in courses for which they meet all prerequisites and should follow the same procedures as students seeking regular admission. Students taking fewer than 12 semester hours are considered part-time and pay tuition according to the semester hour rate. Part-time students may be eligible for federal and state financial aid programs and should apply for financial aid each year to determine eligibility.

Summer Session

For students needing additional instruction in algebra, language skills development, or ESL (based on the results of the placement assessment), BFIT provides academic skills-building summer courses. Selected technical courses are also available in the summer. Inquiries concerning summer study should be directed to the Office of Admissions.

International Applicant Information

FALL SEMESTER (SEPTEMBER)
Priority Deadline: May 1

SPRING SEMESTER (JANUARY)
Priority Deadline: October 1

REQUIREMENTS FOR ADMISSION

International applicants must submit to the Office of Admissions: secondary-school educational records or transcripts, accompanied by certified English translations as necessary. Documents should include year of secondary school graduation, courses undertaken, and grades earned in each course, as well as exam results. Applicants who have taken external examinations, such as the GCE “O” and “A” levels, or the International Baccalaureate, should submit the results in support of their application.

The agency listed below provides evaluations of educational credentials and course-by-course reports for students educated at foreign secondary schools, colleges, or universities.

Center for Educational Documentation
P.O. Box 170116
Boston, MA 02117

Telephone: (617) 338-7171
Fax: (617) 338-7101

Web: http://www.cedevaluations.com

BFIT, not the agency, determines the final decision for the acceptance of transfer credits. If accepted, students must pay the required $100 (U.S.) tuition deposit before the Certificate of Eligibility (I-20 Form) can be issued.
APPLICATION PROCEDURE

- Complete the BFIT Application for Admission.
- Attach an international money order for $50 (U.S.) to application. Students may also pay by credit card online at our website www.bfit.edu. This fee is non-refundable.
- Submit a transcript (with certified English translation, if needed) of secondary school records and relevant examination scores. Transfer students should also submit university transcripts and course descriptions.
- Submit evidence of English proficiency through the paper-based TOEFL, internet-based TOEFL, IELTS exam, or completion of English language proficiency from one of the College’s certified language partner organizations. An updated list of English language partner organizations can be found on the College’s Admissions webpage.
- Submit a completed Financial Declaration Form and a current bank statement and letter of support from sponsor that demonstrates available funding that is greater than or equivalent to one-year of tuition and housing costs.
- International students seeking to bring dependents (defined as a spouse or child under the age of 21) must demonstrate additional funding for each dependent.

ENGLISH LANGUAGE PROFICIENCY

All applicants must demonstrate fluency in English. Completing at least one of the following may do this:

- Submitting official test scores of the Test of English as a Foreign Language (TOEFL) administered by the College Entrance Examination Board.
- Submitting official test scores of the International English Language Testing System (IELTS).
- Certificate of completion of English as a Second Language program from a recognized language institute.
- Satisfactory completion of the BFIT ESL course.

FINANCIAL DOCUMENTATION

All international students are expected to have sufficient funds available to cover all academic and living expenses for the duration of their stay in the U.S. International applicants are required to provide BFIT with a financial statement showing proof of ability to pay these costs for the first year of study. BFIT has estimated that $34,000 USD should be sufficient to cover first-year expenses, including tuition, room and board, books, and fees.

WHEN TO APPLY

Applications and all supporting material should be submitted no later than three months prior to the intended date of enrollment to allow an appropriate amount of time for the student to obtain their visa to study in the U.S.

FORM I-20

BFIT issues the Certificate of Eligibility (Form I-20) only after payment of the $100 (U.S.) tuition deposit. All fees and deposits are non-refundable.

FINANCIAL AID POLICY FOR INTERNATIONAL STUDENTS

BFIT does not offer financial assistance to international students. Students are advised to investigate sources of financial aid in their own countries such as government agencies, civic organizations, industry, or lending institutions.

INTERNATIONAL STUDENT ADVISING

Once enrolled, all international students are required to meet with the International Student Advisor at the beginning of each semester. Additional meetings may need to be scheduled to review new federal regulations or if the student is having academic difficulties.

Tuition Costs and Financial Aid

Tuition for the 2014–2015 academic year is $16,350 for Associate Degree and certificate programs and $18,150 for the junior and senior years of the Bachelor degree programs.

Per credit cost at BFIT is $707 for Associate Degree and certificate programs and $758 for the Bachelor of Science programs.

Students enrolled in 12-20 credits are charged the full-time tuition rate. Students that are enrolled in 11 credits or less are charged at the per credit rate. Students enrolled in more than 20 credits are charged an overload fee for each credit over 20 at the per credit rate.

Through its financial aid programs, BFIT has made it possible for thousands of students to afford the cost of their education. The Financial Aid section of this catalog describes the process of applying for aid.

Tuition and other fees are due before each semester begins. For the fall semester, tuition and fees are payable by August 15; for the spring semester, they are payable by December 15. Payment plans are available. Please contact the Student Accounts Office for information.

Non-degree seeking students who are not actively enrolled in a degree program may audit a course. The audit rate is $250 per credit.

Tuition Deposit

A tuition deposit of $100 is required to secure your spot in the incoming class. This tuition deposit is not refundable after May 1 and is applied toward the first semester tuition bill. For applicants offered admission, the deposit is payable by May 1 or within 14 days of notification of acceptance after May 1. Requests for tuition deposit refunds before May 1 should be made in writing to the Dean of Student Services.

2014 / 2015 COURSE CATALOG 23
TUITION COSTS AND FINANCIAL AID

Application Fee (Non-refundable Fee)
An application fee of $25 must accompany each application for admission to BFIT. For International Students the application fee is $50.

Health Insurance Plan (Non-refundable Fee)
Under the provisions of Chapter 23, Section 22, of the 1988 Massachusetts Health Security Act, effective September 1, 1989, each institution of higher education must require all full- and part-time students to participate in the student health insurance program or provide evidence of participation in a health insurance program with comparable coverage. For this purpose, part-time students are defined as those participating in at least 75% of the academic requirements for full-time students. The charge for the school’s health insurance for 2014-2015 is $1,200. This fee will be charged to all students and will be removed only if a waiver form, showing comparable coverage, is submitted. The Waiver deadline for Fall 2014 is September 28, 2014 and for Spring 2015 enrollments the deadline is January 31, 2015. This fee covers a full year and cannot be refunded due to withdrawal. For students who already have comparable medical coverage, a waiver form is available on our website that must be completed in order to be excluded from the College’s insurance plan.

Books, Supplies, and Equipment
Students supply their own textbooks and other materials. Special tool kits are also required for the Automotive Technology, Building Technology and Design, Electrical Technology, and HVAC&R programs. See the financial aid section of this catalog for more detailed information.

Withdrawals and Refunds
Students who find it necessary to withdraw completely from the Benjamin Franklin Institute of Technology must file an Official Withdrawal Form with the Registrar within a few days of withdrawal. Absence from class does not reduce a student’s financial obligation nor guarantee that a final grade will not be recorded.

Upon receipt of the Official Withdrawal Form from the Registrar’s Office, BFIT’s Student Accounts Office may make a partial tuition refund. The date on which such notice is received will be considered the effective date of withdrawal. Students failing to file an Official Withdrawal Form will be provided a refund consistent with Federal regulations.

All other students are refunded according to the following schedule:

<table>
<thead>
<tr>
<th>WITHDRAWAL NOTICE FILED</th>
<th>AMOUNT OF REFUND</th>
</tr>
</thead>
<tbody>
<tr>
<td>During the first week of classes</td>
<td>100%</td>
</tr>
<tr>
<td>During the second week of classes</td>
<td>80%</td>
</tr>
<tr>
<td>During the third week of classes</td>
<td>60%</td>
</tr>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>During the first week of classes</td>
<td>100%</td>
</tr>
<tr>
<td>During the second week of classes</td>
<td>50%</td>
</tr>
<tr>
<td>During the third week of classes</td>
<td>20%</td>
</tr>
<tr>
<td>During the fourth week of classes</td>
<td>10%</td>
</tr>
<tr>
<td>After the fourth week of classes</td>
<td>0%</td>
</tr>
</tbody>
</table>

* Housing Charges will follow the tuition refund policy. Please see the Director of Student Life to officially withdraw from housing. Students that had to purchase their tools in the beginning of the semester through the College, will qualify for a tool fee refund if they return the tools in good condition within 20 days from their date of withdrawal.

Return of Institutional Aid Policy
Students that officially withdraw from the college at any point during an enrollment term automatically lose all their Institutional Aid. Institutional Aid includes all grants and scholarships awarded by BFIT. Upon receipt of the Official Withdrawal Form BFIT’s Financial Aid Office will make the required adjustments.

Return of Title IV Federal Student Aid Policy
Federal regulations require that students who withdraw from all classes prior to completing more than 60% of an enrollment term will have their eligibility for Federal financial aid recalculated based on the percentage of the term completed, which shall be calculated as follows:

\[
\text{Total \# of days in term} = \frac{\# \text{ of days completed by the student}}{\text{Total \# of days in term}}
\]

The total number of calendar days in a term excludes any scheduled breaks of more than 5 days.

Unearned Federal aid (the amount that must be returned to the appropriate program) will be returned in the following order: Federal Direct Stafford Loans (unsubsidized, then subsidized), Federal Direct Parent PLUS Loans, Federal Pell Grant, Academic Competitiveness Grant (ACG), and Federal SEOG.

Benjamin Franklin Institute of Technology reserves the right to determine that a student has withdrawn from the College due to non-attendance of all classes during a given semester.

Please note that students are responsible for any balance owed BFIT as a result of the repayment of Federal aid funds.
Payment of Fees
Students with delinquent accounts may be prohibited from attending class until the matter is cleared through the Student Accounts Office.
Graduation regalia will be withheld from any student with a balance exceeding $200. Diplomas, transcripts, and grade reports will not be accessible until the entire balance has been paid.

Payment Plans
Various payment plan options are available. Students should contact the Student Accounts Office for information by calling 617-588-1349.

Address Change
Students are required to report all address changes to the Registrar’s Office. Failure to do this will prevent important material, such as grade reports or registration forms, from reaching the students.

Financial Aid
A BFIT education is one of the most important investments you will ever make. We realize that financing this investment is a primary concern for you and your family. Here we show you how the BFIT experience can be affordable for any family.

BFIT offers financial aid to eligible students to assist with financing your education. In order to be considered for need-based financial aid, a Free Application for Federal Student Aid (FAFSA) must be submitted each academic year. Award amounts vary and depend on your demonstrated financial need. Financial Need is determined by subtracting the Expected Family Contribution (EFC), from the Institution’s Cost of Attendance (COA), as determined by the Financial Aid Office.

The estimated cost of attendance for an associate’s degree for the 2016/2017 academic year is

<table>
<thead>
<tr>
<th></th>
<th>Off-Campus Com.</th>
<th>On-Campus Residents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tuition</td>
<td>$16,950</td>
<td>$16,950</td>

<td>$1,200</td>
</tr>
<tr>
<td>Room and Board</td>
<td>$11,400</td>
<td>$11,400</td>
</tr>
<tr>
<td>Total</td>
<td>$18,550</td>
<td>$29,550</td>
</tr>
</tbody>
</table>

For Bachelor’s degree programs please increase your tuition cost to $18,750.

Certain majors have to purchase additional tools or supplies. Tools & Supplies are required for students in Automotive Technology, Building Technology and Design, Electrical Technology and HVAC&R programs. To facilitate the ease of purchase of tools/supplies for students in these programs, the College has arranged for the cost of tools to be added to student invoices. By doing so, students are able to utilize financial aid funds to pay for the expense of tools directly. The fees associated with the programs are as follow:

* Automotive Technology: $2,260 per year for 1st year students and $2,100 per year for 2nd year students
* Building Technology & Design: $300 per year
* Electrical Technology: $500 for textbooks for first year students (pilot program may be expanded in the future—tools for this program are not included in this pricing and are to be purchased directly by the student)
* HVAC&R: $670 for the program

Please note that tool pricing is subject to change based upon the pricing that the College receives from our tool vendors.

Students that already have the required tools needed for each of the programs listed above should contact the department chair to waive the tool fee from their invoice. Waivers should be completed by the end of the first week of the semester. Students who wish to waive the tool fee must have their tools of quality approved, and in classes, during the first week of the semester.

Other programs at the College may require tools and/or materials that will not be included on student invoices. Beyond tuition, health insurance, housing, and tools, students should account for additional expenses including books (estimated at $900), off-campus housing expenses, transportation and any additional personal items that will aid them in their studies as they plan for their enrollment at the College. Estimates of these expenses are calculated by the financial aid office to determine a student’s cost of attendance when establishing a student’s financial need and subsequently, said student’s financial aid package.

About 90% of our students receive some type of financial assistance. At BFIT, we combine federal, state and institutional aid programs to compile a financial aid package that is designed to help every family be able to financially afford a BFIT education.

Note: BFIT cannot guarantee that we will meet your need in full. Financial aid is contingent on the timeliness of your application, federal regulations, and the availability of funds.
Full-time students will be considered for all of the financial aid programs that BFIT administers, after receipt of a valid FAFSA. Student financial aid packages may be a combination of federal and state grants, student loans and work study. These awards will be contingent upon demonstrated financial need and the availability of funds.

**Application Procedure**

In order to apply for Federal and State financial aid, the FAFSA (Free Application for Federal Student Aid) needs to be completed. BFIT does not require any additional applications. Financial aid awards are not renewed automatically. The FAFSA must be completed every academic year.

**STEP 1**

We recommend that applications be filed electronically using the FAFSA on the Web. It can save a significant amount of processing time and dramatically reduces the number of errors commonly found on the form. Go to FAFSA on the Web at: [www.fafsa.gov](http://www.fafsa.gov)

Parent’s and students must request a PIN number to electronically sign the FAFSA. The PIN number only takes minutes to establish. Visit [www.pin.ed.gov](http://www.pin.ed.gov) to apply for your PIN.

Follow the instructions on the website.

List BFIT as one of the schools to receive your FAFSA by including our school code, 002151.

Sign the FAFSA electronically by using a Federal PIN, or by mailing the signed signature page to the federal processors. The signature page is available for printing at the end of the BFIT application.

**STEP 2**

Applicants should receive a Federal Student Aid Report (SAR) from the federal processors 3–4 weeks after the FAFSA has been filed. The SAR indicates the Expected Family Contribution (EFC), which is used to determine eligibility for federal and state financial aid. It also lists the information recorded on the FAFSA. We will receive your information electronically from the federal processor. If BFIT is not listed, please call the federal processor at 1-800-433-3243, or use your PIN to make a correction at [www.fafsa.gov](http://www.fafsa.gov).

**STEP 3**

Follow up with our office. We may need to request further documentation from you and/or your family. If further information is needed, a written notification will go out to you in the mail. It is the student’s responsibility to respond promptly to this document request. We are not able to continue the processing of your financial aid application if the requested documents are not provided.

**STEP 4**

An Award Package will arrive in the mail once we have completed reviewing your application. In order to decline any portion of the award, a signed copy of the award letter indicating what is being declined should be returned to the Financial Aid Office. For more information, please contact us at financialaid@bfit.edu or 617-588-1373.

---

**Types of Financial Aid**

**INSTITUTIONAL AID**

We understand that scholarships play an important role in making a college education affordable. Committed to our mission that finances should not keep a student from an education, we recognize students not only for academic achievement but also for the potential that each brings to Benjamin Franklin Institute of Technology. We offer various scholarships including:

- The Benjamin Franklin Scholarship ranges up to $2,500 per academic year and is awarded to students who demonstrate academic potential but may not have the opportunity to realize that potential before reaching BFIT.
- The Trustee’s Scholarship ranges up to $5,000 per academic year and is awarded to students who demonstrated outstanding academic accomplishments while in high school.
- The President’s Merit Scholarship ranges up to $4,500 per academic year and is awarded to students in recognition of performance in areas such as academic achievement, leadership, special talent, extracurricular involvement and community work.

The Franklin Assistance Grant ranges up to $2,000 per academic year and is awarded to students that demonstrate financial need in combination with the President’s Merit Scholarship.

The Frederick and Anita Jaatinen Graham Scholarship ranges up to $2,000 per academic year and is awarded to students that demonstrate academic achievements to major in Computer Technology, Electronics Engineering Technology, Electrical Technology, Automotive Technology and Mechanical Engineering Technology.

The Women in Technology Scholarship ranges up to $3,000 per academic year and is awarded to female students that demonstrate academic achievement and leadership potential.

THIRD SEMESTER GRANT

A reality of American higher education is that not all students are prepared for college-level courses when they begin their postsecondary careers. In order to help prepare students for college-level coursework, Benjamin Franklin Institute of Technology offers students the opportunity to take developmental courses during their first semester of study. These courses are offered through the College’s Department of Academic Development (DAD). In order to compensate for tuition expended to take developmental courses, the College offers a special tuition grant for students that successfully complete the DAD program and continue to make satisfactory academic progress through their first semester in college-level courses.

The tuition-free Third Semester allows students to become college-ready without losing valuable time and incurring additional tuition costs. BFIT sees it as a reward for remaining committed to success as a student and it is a helpful tool for students to persist to graduation.

To qualify for the Third Semester Grants students must:

- Apply for financial aid by completing the Free Application for Federal Student Aid (FAFSA)
- Maintain satisfactory academic progress (as defined in the College Catalog)
- Successfully complete the DAD program course(s) in a one-semester period and enroll in their major courses during the next two semesters
- Successfully complete their first semester in college-level courses and be eligible to enroll for second semester courses on-time as outlined in the charts on pages 10-17

The charts outline how students proceed through the DAD program and into their college-level courses.

FEDERAL AID

The Federal Pell Grant® provides awards ranging from $582 to $5,645 per academic year for exceptionally needy applicants enrolled full time. The Pell Grant is funded by the Federal Government and is determined based on the information provided on the FAFSA and enrollment status provided. Students have a Pell Grant life-time eligibility limit of 12 semesters or the equivalent.
The Federal Supplemental Educational Opportunity Grant (SEOG)* provides awards ranging from $100-$4,000 and is awarded to students who qualify for the Federal Pell Grant. SEOG is funded by the federal government and will be awarded on a first-come, first-served basis and is subject to the availability of funds.

The Federal Work Study program is sponsored by the federal government and provides jobs for undergraduate students that demonstrate financial need. Students may also choose to work off-campus in one of our community service positions. Students are responsible for finding a qualifying job and, as they work, they will complete time sheets and will receive a pay check for the number of hours worked. Most students work between 5 and 15 hours per week, and their earnings are intended to cover educationally related expenses. Unlike other financial aid or scholarship awards, work study does not reduce your tuition bill. Students will receive a pay check. Work study awards do not require repayment.

*Due to changes in Federal Regulations, the Pell Grant and/or SEOG amounts and/or eligibility criteria are subject to change.

**STATE AID**

State grants are based on financial need and may be offered to eligible students. The Department of Education in each state determines a student’s eligibility for these awards. Many states have application deadlines, which can be found at the FAFSA website. The State of Massachusetts awards grants to eligible students who meet residency and financial criteria. Students must also have a valid FAFSA on file by May 1 of each year. Other states that currently allow students to use state grant funds from their home states to attend schools in Massachusetts include Rhode Island, Vermont, Pennsylvania, and Maine. These grants range in amounts from $250 to $1,800.

The Massachusetts Gilbert Grant is awarded to full-time students who meet the criteria of the Massachusetts State Grant. Award amounts range from $100 to $2,500 per academic year. The Gilbert Grant is contingent upon fund availability.

**FINANCIAL AID**

**LOANS**

There are many loan options available to help finance a BFIT education.

**DIRECT STAFFORD LOANS**

In order for students to borrow from the Direct Stafford Loan program, students must file a FAFSA form, complete a Master Promissory Note and successfully complete loan entrance counseling. To be eligible for them the student needs to be enrolled at least half time. Direct Stafford Loans have a fixed interest rate and minimal origination fee. For 2014-2015 academic year interest rates and fees please visit our website. The annual limits that a student can borrow are listed below.

</tbody>
</table>

There are two types of Loans: subsidized and unsubsidized. The subsidized loan program requires that the student demonstrate financial need. The advantage of the subsidized loan is that the government pays the interest on the loan while the student is enrolled at least half-time and during the 6 month grace period.

Interest subsidy during the six month grace period is eliminated for loans made after July 1, 2012. This means, interest accrued during those six months will be payable by the student. For 2014-2015 academic year, a new borrower on or after July 1, 2014, becomes ineligible to receive additional Direct Subsidized loans if the period during which the student has received such loans exceeds 150% of the published length of the student’s educational program. The student also becomes responsible for accruing interest during all periods as of the date the student exceeds the 150% limit.

Under the unsubsidized program, students can borrow even if they have no demonstrated need; however, the interest that accrues during enrollment is the student’s responsibility. While in school, interest only payments may be made, but are not required. If interest is not paid while in school, the interest is capitalized (added to the original loan amount) once repayment begins.

When a student graduates or withdraws from school, the Stafford loan goes into a 6-month repayment grace period. The average student loan debt for our students upon graduation is $14,109. Students are required to complete Exit Loan Counseling upon leaving the College or dropping below half-time enrollment.

**PARENT LOANS**

The parent loan program described below allows creditworthy parents to borrow up to the entire cost of college, less any awarded financial aid. The student and applicant must meet eligibility requirements outlined in the application materials. Unlike student loans, repayment on parent loans begins 60 days after the final disbursement of loan funds to the school for that academic year. Parents may request a deferment from their lender while the student is enrolled in school at least half time.

Federal Direct PLUS Loan: The Federal Direct Parent Loan for Undergraduate Students (PLUS) allows parents to borrow on behalf of their dependent students. Eligibility for this loan is not based on financial need but does require a credit check. Parents may borrow up to the cost of attendance minus any financial aid.

The loan has a fixed interest rate of 7.9%. There is a maximum repayment period of 10 years, with a minimum monthly payment of $50. An origination fee not to exceed 4% is subtracted from the requested loan amount. In the case that a parent is not approved for a PLUS loan, the student may be eligible for an additional Unsubsidized Stafford Loan.
ALTERNATIVE STUDENT LOANS
Many families supplement their college financing plan with private educational loans. Private loans are available from a variety of sources and provide additional funding when the other types of aid do not cover costs. These loans are not guaranteed by the federal government but by private financial institutions. Interest rates on these loans are typically higher than federal loans but lower than personal loans. Student borrowers will need a creditworthy co-signer to borrow an alternative loan. For more information about these loans, please contact the Financial Aid Office at 617-588-1573 or via email at financialaid@bfit.edu.

PRIVATE SOURCES
Applicants are urged to seek additional aid from their own community. Many towns and cities have civic organizations or churches, which may offer scholarships on the basis of need or academic merit. Labor unions and corporations are often good sources of scholarship assistance to children of employees. Applicants should consult their high school guidance counselors or local libraries for additional information. An excellent source for information on financial aid is the Higher Education Information Center at the Boston Public Library at Copley Square.

VETERANS BENEFITS
Other sources of student aid are veterans benefits for veterans, widows of veterans, and children of deceased or disabled veterans. Students with certain physical or emotional disabilities may seek aid from the State Rehabilitation Commission in their area. Those who qualify for benefits under any Veteran Bill or Massachusetts Rehab must contact the Registrar’s Office at the beginning of the school year concerning the processing of the necessary forms. Forms should be filed as soon as possible after being accepted to BFIT.

Student Services
The Division of Student Services is lead by the Dean of Student Services and is made up of Advising and Student Success, Athletics, Campus Activities, Counseling, Disability Support Services, Residence Life, Student Conduct, and Student Life. The department coordinates services and activities for students outside of the classroom, including academic support, student organizations, campus events, and extracurricular activities. The department is dedicated to the holistic support of students through efforts that enhance academic, social, and personal growth.

Academic Success Center
The Academic Success Center (ASC) offers drop-in tutoring from faculty members throughout the year that is included in the cost of tuition. Subjects for tutoring include math, physics, English, writing, computers, and electronics. Students may work in groups or one-on-one with tutors and can ask for assistance with homework, long term projects, or basic course skills. The ASC is equipped with desktop and WiFi computer access.

Advising and Student Success
The Office of Advising and Student Success provides general information on advising, registration, referral resources for students with documented disabilities, and coordinates college wide academic success initiatives such as tutoring. Each student is assigned a faculty or staff member who serves as his/her advisor. Advisors want to maintain close contact with students to support their success and encourage several meetings between advisor and advisee each semester. Advisors offer support, review academic progress, help with the registration process for future semesters, provide information, and offer suggestions for career preparation success. Students in academic difficulty need to seek help by talking with their advisor and asking for assistance through the various academic support services.

Athletics
The college is planning to offer a Men’s Varsity Soccer and a Men’s Varsity Baseball program beginning in the 2015-2016 academic year. The Chargers will compete against teams from the New England region and have the opportunity to qualify for post-season play at the regional and national levels. To meet eligibility requirements, students must be full-time (12 or more credits) and maintain the standards set forth by the NJCAA and BFIT. Teams will compete in the NJCAA Division III intercollegiate competition.

Campus Activities and Student Life
The Office of Student Life provides an atmosphere that fosters campus community and lifelong learning through student engagement, community building, and leadership development. The staff engages students through student organizations, campus recreation, volunteer programs, and leadership programs. They also support faculty through service-learning initiatives in the classroom. Please refer to the student handbook for more information.

Counseling Services
Students dealing with personal challenges are encouraged to visit the Social Worker (clinician) or Dean of Student Services. Students may work with the clinician on campus or an outside resource for additional services. Students will bring concerns to a clinician for many reasons including: inability to concentrate, family problems, relationship problems, sexuality issues, coping with loss, feelings of depression, anxiety, suicide, physical abuse, alcohol and drug abuse. BFIT places high priority on making available to students every opportunity possible for personal growth and satisfaction.
STUDENT SERVICES

Disability Support Services
Benjamin Franklin Institute of Technology is dedicated to extending all available services and support systems to everyone, without regard to race, color, national origin, religion, sex, age, disability, sexual orientation, veteran or disabled veteran status. Toward the goal of providing an equal and unbiased education, the College is prepared to take every possible step to allow students access to its services and to provide the broadest possible opportunity for participation at BFIT.

Students with documented disabilities, who seek accommodations, must provide clinical documentation to the Assistant Director of Student Success before receiving services. All information regarding the disabilities is treated confidentially.

For proper and timely accommodations, accepted students with documented disabilities should follow these steps:

1. Bring clinical documentation that contains specific recommendations to the Assistant Director of Student Success, preferably before the semester begins. It is most helpful if a licensed psychologist or educational specialist has completed the evaluation within the last 3 years. Notes from special education teachers or tutors are not particularly helpful forms of documentation unless they include disability diagnosis and specific recommendations for accommodations. If testing or evaluation is necessary, it is the student’s responsibility to make those arrangements.

2. Meet with the Assistant Director of Student Success to discuss challenges associated with their disabilities, the services provided at BFIT, and to determine what, if any, services the students want or need. If it is determined that accommodations are needed and the student signs a release and, working with the Assistant Director of Student Success, completes a confidential accommodation request form describing the accommodations needed.

3. Students are encouraged to contact instructors to let them know about the disability and the types of accommodations required and present the accommodation request form during the first week of classes. The Assistant Director of Student Success, the student and the instructors sign the accommodation request, the student and instructor will each keep a copy and the original will be kept on file in the office of the Assistant Director of Student Success.

When requesting extended time for test taking, completing papers or take-home assignments, students should remind instructors at least two weeks prior to the due date. The instructors need sufficient time to make alternative arrangements.

First Year Experience (FYE)
The First Year Experience (FYE) is a two-day new-student orientation designed to assist students in the successful transition to college. In addition, students will become acquainted with their program of study, meet key faculty, staff and their advisor. FYE creates opportunities for new students to build lasting friendships with classmates, strengthen their academic preparedness, learn about resources at the college, and find out what to expect in college-level classes.

Residence Life
Benjamin Franklin Institute of Technology offers limited housing through a relationship with Fisher College at the Stuart Street Hostel in the Theater District. The Stuart Street Hostel is located near the CutWang Theater and the Willbur Theater, and is only a 10-15 minute walk to BFIT campus.

The Campus Activities Coordinator/Resident Director lives on site throughout the academic year. He/she will conduct bi-monthly meetings at the residence hall to assist students with the transition to college, build community, create social opportunities through educational and social programming, and advise the Residence Hall Association. Residence Life staff will review and enforce all policies of BFIT, Fisher College, and the Stuart Street Hostel.

Student Code of Conduct
Benjamin Franklin Institute of Technology (BFIT) has a rich tradition in which all members of the community teach and learn in an environment conducive to intellectual and moral development. All members of the BFIT community must take responsibility for their actions and be willing to accept the consequences of their deeds.

The College has a set of regulations, not meant to limit a student’s freedom, but to ensure the well-being and rights of all community members. Students are required to conduct themselves in a manner reflecting favorably on the college. Failure to comply with student regulations will lead to disciplinary action and may lead to separation from the College.

INTERPRETATION OF REGULATIONS
The purpose of publishing the conduct policy is to give students general notice of prohibited behavior. This Code is not written with the specificity of a criminal statute.

INHERENT AUTHORITY
The College reserves the right to take necessary and appropriate action to protect the safety and well being of the campus community. Such action may include pursuing conduct action for any violation of state or federal law, on or off-campus, or any behavior that affects the College’s educational interests.

REPORTING ACTS OF MISCONDUCT
Any student, faculty, or staff member may file a complaint of student misconduct to the Director of Student Life, Dean of Student Services, Security, or any other Student Services staff member. All reporters will fill out the “Incident Report” form and submit electronically to one of the designees listed above. Reports of alleged misconduct will be reviewed and adjudicated if necessary.
DISCIPLINARY ACTION WHILE CRIMINAL CHARGES ARE PENDING
Students may be accountable both to civil authorities and to the College for acts that constitute violations of law and of this Code. Disciplinary action at the College will normally proceed during the pendency of criminal proceedings, and will not be subject to challenge on the ground that criminal charges involving the same incident have been dismissed or reduced.

INTERIM SUSPENSION
The Dean of Student Services (or designee) may suspend a student from the College for an interim period pending disciplinary or criminal proceedings, or medical evaluation.
A. The Dean of Academic Affairs will be informed regarding an interim removal of a student from class during a disciplinary investigation.
B. The interim suspension shall become immediately effective without prior notice whenever there is evidence that the continued presence of the student at the College poses a substantial and immediate threat to him/herself or to others, or to the stability and continuance of normal College functions.
C. A student suspended on an interim basis shall be given a prompt opportunity to appear personally before a conduct hearing officer in order to discuss the issue.

STANDARDS OF CLASSROOM BEHAVIOR
The primary responsibility for managing the classroom environment rests with the faculty. Students who engage in any prohibited or unlawful acts that result in disruption of a class may be directed by the faculty member to leave the class for the remainder of the class period. Longer suspensions from a class, or dismissal on conduct behavior grounds, must be consulted with the Director of Student Life, Dean of Student Services, and the Dean of Academic Affairs.

ZERO TOLERANCE
The College supports a zero tolerance policy against any violent action or threat of violent action toward a student, faculty, staff member, or to the institution as a whole. Students are expected to engage in appropriate conversations and use appropriate language at all times. Interpretation of language in regards to threats of violence will be at the discretion of the Dean of Student Services, Director of Student Life, or designated professional staff members.
It is a student’s responsibility to be familiar with the full list of prohibited conduct and the student conduct process, which are available in the Student Handbook and Planner as well as the BFIT Student Conduct website.
Student Rights and Responsibilities

Alcohol and Drug Policy
BFIT supports a zero tolerance policy for the use, possession or intent to distribute alcohol or drugs on college property or at campus housing premises. These offenses are serious in nature and will result in sanctions that may include suspension or expulsion from the residence hall and/or expulsion from the College. There will be no use, possession or distribution of alcoholic beverages, regardless of age. Persons 21 or older will have the responsibility of conducting themselves in a professional manner at all times. While the College does not have jurisdiction outside of college property or at the campus housing premises, any student that appears intoxicated upon entering either of these buildings will be in violation and subject to sanctions.

Knowingly being in the presence of someone using, possessing or has the intent to distribute alcohol or drugs is prohibited. Students are reminded that strict penalties may apply to trafficking drugs, from incarceration to the payment of high fines. BFIT is in full cooperation with government authorities regarding legal ramifications of drug and alcohol usage. Students seeking counseling or professional services for alcohol or drug-related matters will meet with a Student Conduct Officer. Referrals can be made for the student to seek outside assistance.

Bias-related Violence, Harassment, or Intimidation Policy
It is the goal of Benjamin Franklin Institute of Technology to maintain an environment free of violence, intimidation and harassment. Bias-related behavior based on race, religion, gender, age, ethnicity, national origin, physical appearance, disability or sexual orientation assails the dignity and worth of the individual and will not be tolerated. Indeed, victimization will be actively opposed.

We expect that all members of this community will treat each other with dignity and respect, and that all members of the community will assume the responsibility of appropriately confronting acts of bias-related violence, intimidation and harassment which may occur. This policy statement identifies a non-exhaustive list of examples of behavior that are unacceptable and outlines the procedures for handling violations.

DEFINITION
Bias-related violence, intimidation and harassment is defined as verbal, written or physical conduct which is based on race, religion, gender, age, ethnicity, national origin, physical appearance, disability or sexual orientation. In addition, such conduct inevitably has the effect of unreasonably interfering with an individual’s academic, co-curricular, social or work-related participation in the college community. Bias-related violence, intimidation and harassment exists, for example, when:

1. Behavior is intended to intimidate, insult or stigmatize an individual or group;
2. Use is made of provocative words or nonverbal symbols which, by virtue of their form, are commonly understood to convey direct and visceral hatred or contempt for human beings; or
3. An act of violence is committed in connection with a bias.

Nothing in this definition should be construed as an abrogation of freedom of expression as established in The Student Rights, Freedoms, and Responsibilities. However, protected freedom of expression ends when prohibited bias-related violence, intimidation or harassment begins.

Campus Smoking Policy
Smoking is not permitted anywhere at Benjamin Franklin Institute of Technology, including all common work areas, elevators, hallways, vehicles, restrooms, student lounge, conference and meeting rooms, faculty/staff offices, classrooms and all other enclosed areas.

The policy applies to all students, employees, and visitors, with no exceptions. Smoking is allowed only in the designated area at BFIT (picnic area on the corner of Appleton and Tremont Street). Signs are posted in this area.

In addition, to lessen the effects of second-hand smoke, individuals smoking outside of college buildings are prohibited from smoking within 25 feet from exterior entrances, the plaza, operable windows or outdoor air-vents, regardless if the smoking is on or off the college campus, including campus housing.

Fire Safety Policy
In case of fire in the building, the nearest college fire alarm box will be sounded immediately and Campus Safety will be notified as to the location of the fire. Fire alarm boxes are located throughout the college campus. Upon hearing the alarm, faculty, staff, and students are required to immediately exit the building. Once outside the building, evacuation coordinators will direct occupants to designated areas. Students should remain on the sidewalk, away from the building, until notified. Unauthorized re-entry into a building during an evacuation is not permitted. Violators of this policy are subject to disciplinary action.

Campus Emergency Management has individuals responsible for developing and maintaining the Emergency Operations Plan and training staff including all elements of evacuation.

Alarm Systems: Smoke detectors and sprinkler systems must not be covered or blocked. Tampering with any component of the smoke detection system or sprinkler
system is prohibited. Nothing may be attached to wiring, smoke detectors, and/or sprinkler system components. Violators will be charged for repair and/or replacement of any device used with possible disciplinary action.

Evacuation: College officials reserve the right to evacuate any building or facility for emergency reasons. Noncompliance or failure to cooperate with faculty and staff during an emergency, real or drill will result in disciplinary action.

Drills: Drills are conducted each semester. Whether drills are conducted during the day or night, full cooperation in quickly and safely evacuating the buildings is expected. Since everyone’s ultimate concern is life safety, noncompliance or failure to cooperate in any way will lead to disciplinary action.

Fire Doors: Fire doors must not be propped open or disabled.

If you have any questions, please contact the Office of Emergency Management (Urfit).

Hazing Policy

THE HAZING ACT, MASSACHUSETTS GENERAL LAWS, CHAPTER 269, SECTIONS 17 THROUGH 19

This is a true copy of sections 17, 18, and 19 of the Hazing Act to be provided to each BFTU student in accordance with the law.

Section 17. Whoever is a principal organizer or participant in the crime of hazing, as defined herein, shall be punished by a fine of not more than three thousand dollars or by imprisonment in a house of correction for not more than one year, or both such fine and imprisonment.

The term “hazing” as used in this section and in sections eighteen and nineteen, shall mean any conduct or method of initiation into any student organization, whether on public or private property, which willfully or recklessly endangers the physical or mental health of any student or other person. Such conduct shall include whipping, beating, branding, forced calisthenics, exposure to the weather, forced consumption of any food, liquor, beverage, drug or other substance, or any other brutal treatment or forced physical activity which is likely to adversely affect the physical health or safety of any such student or other person, or which subjects such student or other person to extreme mental stress, including extended deprivation of sleep or rest or extended isolation.

Notwithstanding any other provisions of this section to the contrary, consent shall not be available as a defense to any prosecution under this action.

Section 18. Whoever knows that another person is the victim of hazing as defined in section seventeen and is at the scene of such crime shall, to the extent that such person can do so without danger or peril to himself or others, report such crime to an appropriate law enforcement official as soon as reasonably practicable. Whoever fails to report such crime shall be punished by a fine of not more than one thousand dollars.

Section 19. Each institution of secondary education and each public and private institution of post secondary education shall issue to every student group, student team or student organization which is part of such institution or is recognized by the institution or permitted by the institution to use its name or facilities or is known by the institution to exist as an unaffiliated student group, student team or student organization, a copy of this section and sections seventeen and eighteen; provided, however, that an institution’s compliance with this section’s requirements that an institution issue copies of this section and sections seventeen and eighteen to unaffiliated student groups, teams or organizations shall not constitute evidence of the institution’s recognition or endorsement of said unaffiliated student groups, teams or organizations.

Each such group, team or organization shall distribute a copy of this section and sections seventeen and eighteen to each of its members, plebes, pledges, or applicants for membership. It shall be the duty of each such group, team or organization, acting through its designated officer, to deliver annually, to the institution an attested acknowledgement stating that such group, team or organization has received a copy of this section and said sections seventeen and eighteen, that each of its members, plebes, pledges, or applicants has received a copy of sections seventeen and eighteen, and that such group, team or organization understands and agrees to comply with the provisions of this section and sections seventeen and eighteen.

Each institution of secondary education and each public or private institution of post secondary education shall, at least annually, before or at the start of enrollment, deliver to each person who enrolls as a full time student in such institution a copy of this section and sections seventeen and eighteen.

Each institution of secondary education and each public or private institution of post secondary education shall file, at least annually, a report with the board of higher education and in the case of secondary institutions, the board of education, certifying that such institution has complied with its responsibility to inform student groups, teams or organizations and to notify such full time student enrolled by it of the provisions of this section and sections seventeen and eighteen and also certifying that said institution has adopted a disciplinary policy with regard to the organizers and participants of hazing, and that such policy has been set forth with appropriate emphasis in the student handbook or similar means of communicating the institution’s policies to its students. The board of higher education and, in the case of secondary institutions, the board of education shall promulgate regulations governing the content and frequency of such reports, and shall forthwith report to the attorney general any such institution which fails to make such report.
STUDENT RIGHTS AND RESPONSIBILITIES

DISCIPLINARY POLICY WITH REGARD TO THE ORGANIZERS AND PARTICIPANTS OF HAZING

The Hazing Act requires the College to have a disciplinary policy for the organizers and participants of hazing, and to set it forth with appropriate emphasis in the student handbook or similar means of communicating the institution’s policies to its students.

The College procedures concerning the initiation of conduct proceedings contained within the Student Code of Conduct state that:

● The College reserves the right to take necessary and appropriate action to protect the safety and well being of the campus community. Such action may include pursuing conduct action for any violation of state or federal law, on or off-campus, that affects the College’s educational interests.

● Any student, faculty, or staff member may file a complaint of student misconduct to the Director of Student Conduct, Dean of Student Services, Security, or any other Student Services staff member. All reporters will fill out the "Incident Report" form and submit the form electronically to one of the designees listed above. Reports of alleged misconduct will be reviewed and adjudicated if necessary.

● A student, who demonstrates unacceptable behavior, thereby failing to be a responsible member of the BFIT community, may be subject to disciplinary action. Reports of alleged violations will be provided to the designee of the Student Conduct system who will review the incident, call in members of the faculty, staff, and/or students and determine an appropriate outcome based on the preponderance of the evidence.

Organizing or participating in hazing shall be deemed misconduct and charges will be filed in writing to the Director of Residence Life and Student Conduct or Dean of Student Services. Such charges will be considered “extraordinary circumstances” and the student(s) concerned may be placed on interim suspension, effective immediately, pending further investigation of the case.

When it is determined in accordance with the Student Code of Conduct that a charged party was an organizer or participant in hazing under the meaning of the law the sanctions recommended by the hearing board shall be limited to restitution, suspension or expulsion.

Information Technology and Computer Use Policy

This policy governs computer and network usage for faculty, staff and students at BFIT. As a user of these resources, you are responsible for reading and understanding the following documented information. This documented information protects the consumers of computing resources, computing hardware and networks, and system administrators. (Contact the Director of Information Technology (CMIT) if you have any questions.)

RIGHTS AND RESPONSIBILITIES

Computers and networks can provide access to resources on and off campus as well as the ability to communicate with others worldwide. Such open access is a privilege and requires that individual users accept responsibility. Users must respect the rights of other users, respect the integrity of the systems and related physical resources, and observe all relevant laws, regulations, and contractual obligations. Since electronic information is volatile and easily reproduced, users must exercise care in acknowledging and respecting the work of others through strict adherence to software licensing agreements and copyright laws.

Misuse of computing, networking or information resources may result in the loss of computing and/or networking access. Additionally, misuse can be prosecuted under applicable BFIT or campus policies, procedures, or collective bargaining agreements.

Illegal production of software and other intellectual property protected by U.S. copyright law is subject to civil damages and criminal punishment including fines and imprisonment.

The Benjamin Franklin Institute of Technology supports the policy of EDUCOM on Software and Intellectual Rights, which states, “Respect for intellectual labor and creativity is vital to academic discourse and enterprise.” This principle applies to works of authors and publishers in all media. It encompasses respect for the right to acknowledgement, right to privacy, and the right to determine the form, manner, and terms of publication and distribution. Because electronic information is volatile and easily reproduced, respect for the work and personal expression of others is especially critical in computer environments. Violations of authorial integrity, including plagiarism, invasion of privacy, unauthorized access, and trade secrets and copyright violations may be grounds for sanctions against members of the academic community.”

Other organizations operating computing and network facilities that are reachable via the Institute may have their own policies governing the use of those resources. When accessing remote resources, users are responsible for obeying both the policies set forth in this documented information and the policies of the other organizations.

NO EXPECTATION OF PRIVACY

Students have access to computers and the Internet to assist them in the educational process. Students should have no expectation of privacy in anything they create, store, send or receive using BFIT’s computer equipment. The computer network is the property of BFIT and may be used only for educational purposes.

WAIVER OF PRIVACY RIGHTS

Students expressly waive any right of privacy in anything they create, store, send and receive, when using BFIT computer equipment or Internet access. Students consent to allow BFIT personnel access to and review of all materials created, stored, sent or received by students through any BFIT network or Internet connection.
MONITORING OF COMPUTER AND INTERNET USAGE
BFIT has the right to monitor and log any and all aspects of its Computer System including, but not limited to, monitoring Internet sites visited by students, monitoring chat and newsgroups, monitoring file downloads and all communications sent and received by students.

BLOCKING SITES WITH INAPPROPRIATE CONTENT
BFIT has the right to utilize software that makes it possible to identify and block access to Internet sites containing sexually explicit or other material deemed inappropriate in this setting.

FRIVOLOUS USE
Computer resources are not unlimited. Network bandwidth and storage capacity have finite limits, and all students connected to the network have a responsibility to conserve these resources. As such, students must not deliberately perform acts that waste computer resources. Those acts include, but are not limited to, sending mass mailing or chain letters, spending excessive amounts of time on the Internet, playing games, engaging in on-line chat groups, uploading or downloading large files, accessing streaming audio and/or video files, or otherwise creating unnecessary loads on network traffic associated with non—education—related uses of the Internet.

EXISTING LEGAL CONTEXT
All existing laws (federal and state) and College regulations and policies apply, including not only those laws and regulations that are specific to computers and networks, but also those that may apply generally to personal conduct and harassment.

Users do not own accounts on BFIT computers, but are granted the privilege of exclusive use. Under the Electronic Communications Privacy Act of 1986 (Title 18 USC, section 2510 etc. Seq.), users are entitled to privacy regarding information contained on these accounts. This act, however, allows system administrators or other College employees to access user files in the normal course of their employment, when necessary to protect the integrity of computer systems or the rights or property of the College. For example, system administrators may examine or make copies of files that are suspected of misuse or that have been corrupted or damaged. User files may be subject to search by law enforcement, which may be used as evidence in a court of law. In addition, student files on College computer facilities are considered “educational records” under the Family Educational Rights and Privacy Act of 1974 (Title 20 U.S.C. section 1292(f)).

VIOLATIONS
Please see the Student Code of Conduct. Prohibited Conduct section 9.2, a-q for a listing of all Information Technology and Computer Use violations.

ENFORCEMENT
Minor infractions of this policy, when accidental, such as consuming excessive resources or overloading computer systems, are generally resolved informally by the unit administering the accounts or network. This may be done through electronic mail or in-person discussion and education.

Repeated minor infractions or misconduct that is more serious may result in referral to the Student Conduct system, in which the student may face temporary or permanent loss of computer access privileges or the modification of those privileges. More serious violations include, but are not limited to, the unauthorized use of computer resources, attempts to steal passwords or data, unauthorized use or copying of licensed software, repeated harassment, or threatening behavior.

In addition, offenders may be referred to their sponsoring advisor, department, employer, or other appropriate College office for further disciplinary action.

Adapted with permission from the University of California, Davis, Computer and Network Use Policy.

Missing Student Policy
The Benjamin Franklin Institute of Technology takes student health and safety seriously and considers it with utmost importance. The staff of BFIT will make all efforts to communicate with appropriate persons in a timely manner regarding a student’s health and safety. The following policy and procedure has been placed into effect to support any student living in BFIT housing, who based on facts and circumstances known to the College, are determined to be missing.

The enacted policy is in accordance with Section 485 of the Higher Education Act (HEA), which states that every institution of higher education that provides on-campus housing must provide a missing student notification policy for those students residing in on-campus housing.

REPORTING A SUSPECTED MISSING STUDENT
Anyone who suspects a student to be missing should report their concern to the Residence Life staff or designated Student Affairs professionals (as noted below). All reports made to the College will be followed up with an immediate investigation once a student has been missing for 24 hours. Depending on the circumstances presented to College officials, parents of a missing student will be notified. In the event that parental notification is necessary, the Dean of Student Services or designer will place the call.

A suspected missing person should reported to any of the following staff members by calling the College’s main line during standard business hours at 617–423–4630 and using the automated directory to reach:

- Mike Bosco, Dean of Student Services
- Brett Wellman, Director of Student Life
- BFIT Security

During evening, overnight, and weekend hours, reports of a missing student should be made to the Campus Activities Coordinator/Resident Director by calling 617–315–5843.
StUDENT RIGHTS AND RESPONSIBILITIES

The following information will be collected and documented when it is reported to a staff member:

- Name and directory information of suspected missing person
- Name and relationship of person reporting the suspected missing person
- Contact information (cell phone, email, address) of the person reporting
- Date, time, location the suspected missing person was last seen
- Any known extracurricular, off-campus visits (friends, family) or work commitments of the suspected missing person
- Cell phone number of the suspected missing person

DETERMINING A MISSING STUDENT

Once a student has been reported as missing, staff members may participate in any or all of the following procedures to make contact with the suspected missing student:

- Administratively key into the student’s residence hall room (refer to the keying in policy located in the student handbook)
- Call and text the student’s cell phone (or other numbers posted in CAMS)
- Check other possible public locations (library, off-campus gym, student lounge, etc)
- Contact student’s roommate (if applicable) and floor-mates to create a timeline of the last known whereabouts of the missing student (date, time, location, activities)
- Contact student’s faculty members
- Contact student’s emergency contact
- Contact any off-campus friends
- Check any social media websites (Facebook, MySpace, Twitter, etc)

INVOlING LOCAL LAW ENFORCEMENT AGENCIES

Once all information has been collected regarding the suspected missing student and a timely and appropriate investigation has taken place by College officials, the Dean of Student Services and/or designee will make contact with the Boston Police Department. Once the information is reported to the Boston Police Department, the Dean of Student Services will continue to act as the spokesperson to the family and concerned reporter regarding the missing student. Residence Life, Student Services, and Security will assist any local law enforcement agencies with the investigation upon request by providing all necessary and appropriate information on the student and by using any of the procedures and the resources listed above to assist in the investigation that are legally permissible.

Campus SaVE Act

Policy Concerning Sexual Assault, Domestic Violence, Dating Violence, and Stalking

INTRODUCTION

Benjamin Franklin Institute of Technology is committed to providing a safe learning and working environment.

In compliance with federal law, specifically the Jeanne Clery Act (Clery Act) and the Campus Sexual Violence Elimination Act (SaVE Act), Benjamin Franklin Institute of Technology has adopted policies and procedures to prevent and respond to incidents of sexual assault, domestic violence, dating violence, and stalking. These guidelines apply to all members of the BFIT community (students, faculty, and staff) as well as contractors and visitors.

Benjamin Franklin Institute of Technology will not tolerate sexual assault, domestic violence, dating violence, or stalking, as defined in this Policy, in any form. Such acts of violence are prohibited by BFIT policy, as well as state and federal law. Individuals who the College determines more likely than not engaged in these types of behaviors are subject to penalties up to and including dismissal or separation from BFIT, regardless of whether they are also facing criminal or civil charges in a court of law.

SEXUAL ASSAULT, DOMESTIC VIOLENCE, DATING VIOLENCE, AND STALKING

- Sexual Assault refers to any sexual act directed against another person, forcibly and/or against the person’s will; or not forcibly or against the person’s will where the survivor is incapable of giving consent, as well as incest or statutory rape.

- Domestic Violence includes felony or misdemeanor crimes of violence committed by:
  - A current or former spouse or intimate partner of the survivor;
  - A person with whom the survivor share a child in common;
  - A person who is or was residing in the same household as the survivor; or
  - Any person against someone who is protected from that person’s acts under the domestic or family violence laws of the jurisdiction.

- Dating Violence refers to violence committed by a person who is or has been in a social relationship of a romantic or intimate nature with the survivor.

- Stalking occurs when an individual engages in a course of conduct directed at a specific person that would cause a reasonable person to fear for his or her safety or the safety of others, or suffer substantial emotional distress.

REPORTING AN INCIDENT

Benjamin Franklin Institute of Technology encourages any member of the BFIT community who has experienced sexual assault, domestic violence, dating violence, or stalking, or knows of another member of the community who has experienced sexual assault, domestic violence, dating violence, or stalking, to report the incident to the College.

If a BFIT student, faculty or staff member, visitor, or contractor has experienced a sexual assault, domestic violence, dating violence, or stalking, they should immediately report the incident to BFIT Security at 617-588-1355 from an on-campus telephone, or 617-588-1355 from an off-campus telephone.
Individuals who are on campus can also make an in-person report to the Security staff. Security will assist all members of the BFIT community by assessing the incident, advising the survivor on how he or she can seek legal protection, and making the survivor aware of medical, counseling, and other support services. If a reported incident did not occur on campus, BFIT Security can assist the survivor in notifying the local police department with jurisdiction over the crime. In case of an emergency or ongoing threat, a survivor should get to a safe location and call 911. Calling 911 will put you in touch with local police.

Students who have experienced a sexual assault, domestic violence, dating violence, or stalking may also report an incident to the Director of Student Life (U113 or by calling 617-588-1596) or to the Dean of Student Services (U112 or by calling 617-588-1754) or to the College’s Title IX Coordinator, Brian Bicknell, at 617-588-1365.

Employees who have experienced a sexual assault, domestic violence, dating violence, or stalking may also report an incident to the Director of Human Resources, Kendall Building, 2nd floor, 617-588-1302.

These offices will provide survivors of sexual assault, domestic violence, dating violence, and stalking with information about available support services and resources, and also assist any survivor in notifying law enforcement, including the local police, if the survivor elects to do so.

Survivors are not required to report to area law enforcement in order to receive assistance from or pursue any options within Benjamin Franklin Institute of Technology. Reporting sexual assault, domestic violence, dating violence, and stalking to the police (including Benjamin Franklin Institute of Technology Security) does not commit the survivor to further legal action. However, the earlier an incident is reported, the easier it will be for the police to investigate, if the survivor decides to proceed with criminal charges.

**WRITTEN NOTIFICATION OF RIGHT AND OPTIONS**

Any student or employee who reports an incident of sexual assault, domestic violence, dating violence, or stalking, whether the incident occurred on or off campus, shall receive a written explanation of their rights and options as provided for under this policy.

These rights and options include the right(s) of a survivor to:

A. Go to court, and to file a domestic abuse complaint requesting an order restraining your attacker from abusing you, and/or an order directing your attacker to leave your household, building, school, college, or workplace;

B. Seek a criminal complaint for threats, assault and battery, or other related offenses;

C. Seek medical treatment (the police will arrange transportation for you to the nearest hospital or otherwise assist you in obtaining medical treatment if you wish);

D. Request the police remain at the scene until your safety is otherwise ensured;

E. Request that a police officer assist you by arranging transportation or by taking you to a safe place, such as a shelter or a family or friend’s residence; and

F. Obtain a copy of the police incident report at no cost from the police department.

**PROCEDURES SURVIVORS SHOULD FOLLOW**

If an incident of sexual assault, domestic assault, dating violence, or stalking occurs, it is important to preserve evidence so that successful criminal prosecution remains an option.

The survivor of a sexual assault should not wash, shower or bathe, douche, brush teeth, comb hair, or change clothes prior to a medical exam or treatment. If a survivor has removed the clothing he or she was wearing during the assault prior to seeking medical treatment, that clothing should be placed in a brown paper, not plastic, bag and brought to the hospital when treatment is sought. If the survivor is still wearing the clothes that he or she was wearing during an assault, he or she should bring a change of clothes with him or her to the hospital so that the clothes containing possible evidence can be preserved and examined for evidence of the crime.

Evidence of violence, such as bruising or other visible injuries, following an incident of sexual assault, or domestic or dating violence, should be documented by taking a photograph. Evidence of stalking, including any communications such as written notes, email, voice mail, or other electronic communications sent by the stalker, should be saved and not altered in any way.

**ON CAMPUS AND OFF CAMPUS RESOURCES**

Benjamin Franklin Institute of Technology and the City of Boston offer other important resources to the survivors of sexual assault, domestic assault, dating violence, or stalking, including medical treatment, counseling services, and advocacy that survivors may wish to utilize.

The following BFIT employees and on campus offices can assist members of the BFIT community in considering their options and navigating through any resources or recourse they may elect to pursue.

A survivor need not formally report an incident of sexual assault, domestic violence, dating violence, or stalking to law enforcement or Benjamin Franklin Institute of Technology in order to access the following resources:

**SEXUAL ASSAULT RESPONSE TEAM MEMBERS:**

Michael Bosco, Dean of Student Services 617-588-1564

Brett Wellman, Director of Student Life 617-588-1536

Shelley Droppin, Director of Human Resources 617-588-1302

Valerie Brathwaite, Social Worker 617-588-1327

Brian Bicknell, Title IX Coordinator/Dean of Academic Affairs 617-588-1365

ACCOMMODATIONS
Regardless of whether a student or employee reports an incident of sexual assault, domestic violence, dating violence, or stalking to law enforcement or pursues any formal action, if they report such an incident to the College, Benjamin Franklin Institute of Technology is committed to providing them as safe a learning or working environment as possible. Upon request, Benjamin Franklin Institute of Technology will make any reasonably available change to a survivor’s academic, living, transportation, and working situation. When a reported incident of abuse involves more than one member of the BFIT community, the College’s Title IX Coordinator, Dean of Student Services, or Benjamin Franklin Institute of Technology Security Department may also issue an institutional No Contact order, prohibiting the individuals from contacting one another, either on or off campus. Students may contact the Dean of Student Services’ office (Union Building, U113, 617-588-1902) for assistance, and employees may contact the Office of Human Resources (Kendall Building, 2nd floor, 617-588-1902) for assistance. Security officers will advise survivors of a reported incident of sexual assault, domestic violence, dating violence, or stalking about how to seek a restraining order from a criminal court that directs the accused to refrain from abuse and to leave the survivor’s household, building, school, college, or workplace.

Benjamin Franklin Institute of Technology is committed to ensuring that orders of protection issued by courts are fully upheld on all College-owned, used, and controlled property as well as properties immediately adjacent to Benjamin Franklin Institute of Technology. Therefore, if any member of the BFIT community obtains an order of protection or restraining order, he or she should promptly inform BFIT Security and the Dean of Student’s Office and provide the Dean of Student Services with a copy of that order, so that the College can enforce it. Benjamin Franklin Institute of Technology is also committed to protecting survivors from any further harm, and if the Benjamin Franklin Institute of Technology Dean of Student Services determines that an individual’s presence on campus poses a danger to one or more members of the College community, the Dean can issue an institutional No Contact or No Trespass Order barring that individual from BFIT property.

SURVIVOR CONFIDENTIALITY
Benjamin Franklin Institute of Technology recognizes the sensitive nature of sexual assault, domestic violence, dating violence, and stalking incidents. We are committed to protecting the privacy of individuals who report incidents of abuse, to the extent that doing so is permitted by law and consistent with the College’s need to protect the safety of the community. Different BFIT officials and personnel are able to offer varying levels of privacy protections to survivors.

BFIT requires all College employees to share with the College’s Title IX Coordinator information they learn concerning a report of sexual assault, or an incident of domestic or dating violence, or stalking, so that the Title IX Coordinator can investigate the incidents, track trends (including possible multiple reports involving the same assailant) and determine whether steps are needed to ensure the safety of the community. It is the survivor’s choice whether he or she wishes to participate in the investigation; however the College may proceed with an investigation without the survivor’s participation if there is a concern for the safety of other members of the community.

Reports made to the BFIT Security will be shared with the Title IX Coordinator in all cases, and may also be made public (maintaining the survivor’s anonymity) and shared with the accused in cases where criminal prosecution is pursued. Reports received by the College concerning the abuse of a minor or juvenile must be reported to state officials in compliance with state law requiring mandatory reporting of child abuse. All members of the BFIT community are required by College policy to report any instances of known child abuse or neglect to BFIT Security, and BFIT Security will in turn report such information to the appropriate state authorities.

Reports of sexual assault, domestic or dating violence, or stalking, which are shared with BFIT’s members of the Sexual Assault Response Team, the Title IX Coordinator, or other College officials, will be treated with the greatest degree of respect and privacy possible while still fulfilling BFIT’s obligations to investigate and effectively respond.
to the report. Every effort will be made to limit the scope of information shared to keep it to a minimum of detail, and only when absolutely necessary. It is the survivor’s choice whether to participate in the investigation; however the College may proceed with the investigation without the survivor’s participation if there is a potential threat to other members of the community.

A survivor’s ability to speak in confidence and with confidentiality may be essential to his or her recovery. Benjamin Franklin Institute of Technology thus expects employees to treat information they learn concerning incidents of reported sexual assault, domestic violence, dating violence, and stalking as much respect as possible. College employees must share such information only with those College officials who must be informed of the information pursuant to College policy. Failure by a Benjamin Franklin Institute of Technology employee to maintain privacy in accordance with Benjamin Franklin Institute of Technology policy will be grounds for discipline.

While federal law requires Benjamin Franklin Institute of Technology to include certain reported incidents of sexual assault, domestic violence, dating violence, and stalking among its annual campus crime statistics, such information will be reported in a manner that does not permit identification of survivors.

**Benjamin Franklin Institute of Technology Educational Programs**

Benjamin Franklin Institute of Technology is committed to increasing the awareness of and prevention of violence. Benjamin Franklin Institute of Technology makes continued efforts to provide students and employees with education programming, and strategies intended to prevent rape, acquaintance rape, sexual assault, domestic violence, dating violence, and stalking before they occur.

To address the issue of sexual assault, domestic violence, dating violence, and stalking in a college environment, Benjamin Franklin Institute of Technology offers practical guidance for risk reduction, violence prevention, and bystander intervention.

- **Personal Safety Workshops** – In an effort to educate the BFIT community about safety, Benjamin Franklin Institute of Technology provides opportunities for all members of the community to learn about safety precautions. Resident Directors, Resident Assistants, and Police Officers conduct awareness workshops for BFIT community members on a wide variety of subjects including but not limited to alcohol awareness, the definition of consent and sexual assault, and wellness.

- **First Year Experience (FYE)** – New student orientation programs address active bystander awareness, support services, medical amnesty, wellness, and personal safety are delivered by members of Student Life and the Benjamin Franklin Institute of Technology Police Department to first year and transfer students.

- **Crime Bulletins and Alerts** – The Benjamin Franklin Institute of Technology Dean of Students Office periodically distributes crime bulletins or alerts to inform members of the BFIT community about incidents of crime in the areas surrounding the College that may pose an imminent threat of harm to members of the community. Bulletins and alerts are also circulated at times, not in response to a specific incident, but as general reminders to community members about measures that members of the community can take to enhance personal and property security.

- **New Employee Orientation** – All new employees receive training on Sexual Harassment and Title IX through the Office of Human Resources.

**Conduct Proceedings**

Benjamin Franklin Institute of Technology strictly prohibits all acts of sexual assault, domestic violence, dating violence, and stalking. In addition to facing criminal investigation and prosecution, students, employees, and other affiliates may also face action by Benjamin Franklin Institute of Technology. When students or employees are accused of having engaged in sexual assault, domestic violence, dating violence, or stalking, the College may, depending on the facts alleged, issue interim safety measures prior to the resolution of the charges. Such interim safety measures might include issuing No Contact orders between the parties, altering an individual’s work or class schedule or a student’s housing assignment, placing an employee accused of misconduct on administrative leave, or placing a student accused of misconduct on an interim suspension.

BFIT’s Title IX Coordinator will oversee all investigations of allegations of gender-based violence. Employees who are found responsible for having committed such a violation could face termination of employment, and students who are found responsible for having committed such a violation may face disciplinary probation, deferred suspension, suspension from college housing, dismissal from college housing, suspension from the college, or dismissal from the college. In addition, Benjamin Franklin Institute of Technology may issue No Contact Orders and No Trespass Orders to those found responsible.

If a Title IX investigation concludes that evidence exists which suggests a student more likely than not engaged in sexual assault, domestic violence, dating violence, or stalking, the matter will be referred to the Dean of Student Services’ office for adjudication pursuant to the Student Code of Conduct. The Office of Human Resources will handle any incidents involving employees and College affiliates who are found by the College to have engaged in behavior that violates College policy, including but not limited to sexual assault, domestic violence, dating violence, or stalking.

All conduct proceedings, whether the conduct is reported to have occurred on or off campus, shall provide a prompt, fair, and impartial investigation and resolution.

Benjamin Franklin Institute of Technology seeks to investigate and adjudicate any official complaints of sexual abuse, domestic violence, dating violence, or stalking that are filed with the College within sixty (60) days of receipt of that complaint, unless mitigating circumstances require the extension of time frames beyond sixty (60) days. Such circumstances may include the complexity of the allegations, the number of witnesses involved, the availability of the parties or witnesses, the effect of a concurrent criminal investigation,
STUDENT RIGHTS AND RESPONSIBILITIES

College breaks or vacations that occur during the pendency of an investigation, or other unforeseen circumstances. In these matters the complainant and the respondent shall be notified, provided an explanation, and given information about the amount of additional time required.

In all investigatory and adjudication proceedings conducted by the College concerning charges of sexual misconduct, domestic violence, dating violence, or stalking, including any related meetings or hearings, both the complainant and the respondent will be afforded the same process rights, including equal opportunities to have others present. This includes the right to be accompanied by an advisor of their choice. Both the complainant and respondent will also be afforded an equal opportunity to introduce evidence and identify witnesses.

When a student is accused of any violation of the student conduct code, including but not limited to charges that he or she engaged in sexual assault, domestic or dating violence, or stalking, the charges will be decided using the preponderance of evidence standard, which means that it is more likely than not that the reported misconduct occurred. The Title IX Coordinator and the Dean of Student Services (or designee) have discretion to decide whether sufficient evidence warrants referring charges of misconduct against a student to a Student Conduct Board (a “Board”). Full information about the Student Conduct Board process can be found in the Student Handbook.

When the Title IX Coordinator completes an investigation and/or when a Board issues a decision, both the complainant and the respondent shall simultaneously be informed in writing within 2 business days of the outcome of the investigation or adjudicative proceeding. Both the complainant and respondent will be given the same procedures and timeframe to appeal the outcome of the proceeding, both parties will receive the same process rights if an appeal is granted, and the parties will both receive timely notice when the outcome becomes final. Disclosure of the outcome shall be made to both parties unconditionally, and each shall be free to share or not share the details with any third parties. Full information about the appeals process can be found in the Student Handbook.

For additional information about employee conduct please consult the Employee Handbook.

Sexual and Other Unlawful Harassment Policy

LEGAL BASIS
Title VII of the 1964 Civil Rights Act
Title XI of the 1972 Educational Amendments
Governor’s Executive Order 200, as amended by Executive Order 240

POLICY
Sexual and other unlawful harassment of a student, an employee, or any other person at the Benjamin Franklin Institute of Technology (BFIT) is impermissible and intolerable. Sexual harassment is a form of sex discrimination and a violation of Title VII of the Civil Rights Act of 1964 and Title XI of the Educational Amendments of 1972. It is against the policies of BFIT for any member of the student body, administration, faculty or staff to harass sexually or in other forms another person at BFIT.

OVERVIEW
It is the goal of the Benjamin Franklin Institute of Technology to promote a college and workplace environment that is free of sexual harassment and other unlawful harassment based on race, sex, sexual orientation, religion, ethnic or national origin, age, criminal record (applications only), mental illness, physical disability, and genetics. Sexual harassment or other unlawful harassment of students or employees occurring in the school and workplace (collectively “Unlawful Harassments”) or in other settings in which employees may find themselves in connection with their employment is unlawful and will not be tolerated by this organization. Further, any retaliation against an individual who has complained about Unlawful Harassment or retaliation against individuals for cooperating with an investigation of an Unlawful Harassment complaint is similarly unlawful and will not be tolerated.

To achieve our goal of providing a college and workplace free from Unlawful Harassment, the conduct that is described in this policy will not be tolerated. We have provided a procedure by which inappropriate conduct will be dealt with, should it be encountered by a student, an employee, or any other person at the Benjamin Franklin Institute of Technology.

Because the Benjamin Franklin Institute of Technology takes allegations of Unlawful Harassment seriously, we will respond promptly to complaints of Unlawful Harassment. Where it is determined that such inappropriate conduct has occurred, we will act promptly to eliminate the conduct and impose appropriate corrective action as is necessary, up to and including termination.

DEFINITION OF SEXUAL OR OTHER UNLAWFUL HARASSMENT:
Generally speaking, Unlawful Harassment consists of a student, employee, or other individual treating another person at the Benjamin Franklin Institute of Technology in a disparate or unequal fashion on the basis of race, color, religious creed, national origin, ancestry, sex, age, veteran status, criminal record (applications only), handicap (disability), pregnancy, mental illness, retaliation, sexual harassment, sexual orientation, and genetics.

Such treatment includes retaliating against an employee for protecting his or her right against such unequal treatment.

In Massachusetts, the legal definition for sexual harassment is this: “sexual harassment” means sexual advances, requests for sexual favors, and verbal or physical conduct of a sexual nature when:

(a) submission to or rejection of such advances, requests or conduct is made either explicitly or implicitly a term or condition of employment or as a basis for employment decisions, also known as “Quid Pro Quo,” or,
(h) such advances, requests or conduct have the purpose or effect of unreasonably interfering with an individual’s work performance by creating an intimidating, hostile, humiliating or sexually offensive educational or work environment – also known as a “Hostile Work Environment.”

Under these definitions, “Quid Pro Quo” involves direct or implied requests for a person of authority for sexual favors in exchange for actual or promised job benefits such as favorable reviews, salary increases, promotions, increased benefits, or continued employment constitutes sexual harassment.

The legal definition of sexual harassment is broad. In addition to the above examples, other sexually-oriented conduct, whether it is intended or not, that is unwelcome and has the effect of creating a “Hostile Work Environment,” where the college or work place environment that is offensive, intimidating, or humiliating to male or female workers may also constitute sexual harassment.

While it is not possible to list all those additional circumstances that may constitute sexual harassment, the following are some examples of conduct that if unwelcome, may constitute sexual harassment depending upon the totality of the circumstances including the severity of the conduct and its pervasiveness:

- Unwelcome sexual advances -- whether they involve physical touching or not;
- Sexual epithets, jokes, written or oral references to sexual conduct, gossip regarding one’s sex life, comment on an individual’s body, comment about an individual’s sexual activity, deficiencies, or prowess;
- Displaying sexually suggestive objects, pictures, and cartoons;
- Sending sexually inappropriate email or displaying Internet pornography or “pop-ups;”
- Unwelcome leering, whistling, brushing against the body, sexual gestures, suggestive or insulting comments;
- Provocative attire;
- Sending suggestive or obscene notes, cards or invitations;
- Inquiries into one’s sexual experiences; and,
- Discussion of one’s sexual activities

All students and employees should take special note that, as stated above, retaliation against an individual who has complained about sexual or other unlawful harassment, and retaliation against individuals for cooperating with an investigation of a sexual or another harassment complaint is unlawful and will not be tolerated by this organization.

BFIT students or personnel who are found to be harassing another person shall be subject to appropriate disciplinary action. Violations of this policy by faculty, administrators, staff or students will lead to disciplinary action, up to and including suspension, expulsion or termination.

Grievance Procedures:

INFORMAL GRIEVANCE PROCEDURE

The informal process will encourage individuals who believe that BFIT’s Equal Employment Opportunity/Affirmative Action Policy and/or Sexual Harassment Policy has been breached, to discuss the concern or breach with any involved BFIT official who may be helpful in resolving the matter, including the Dean of Student Services, Academic Advisor, Supervisor, Dean of Academic Affairs, Human Resource Director, etc.

The purpose of the informal grievance process is to allow for any misunderstanding to be aired and resolved and to provide an opportunity for the aggrieved individual and the alleged perpetrator to attempt to resolve the concern prior to the formal grievance process. The aggrieved individual should use this process to clarify the problem, seek counsel for himself or herself, and decide on a course of action.

A student shall initiate the informal grievance process by informing the Dean of Student Services. The individual initiating the complaint must do so within twenty (20) calendar days from the date s/he knew or should have known of the alleged discriminatory action. Within seven (7) calendar days of the initial complaint, the individual, the Dean of Student Services, and other involved persons, shall meet to discuss the complaint with the intention of finding a satisfactory solution. Within seven (7) calendar days from the date of discussion, the Dean of Student Services shall offer the proposed initial resolution to the individual in writing. Every effort is made to resolve the complaint informally at this level.

FORMAL GRIEVANCE AND HEARING PROCEDURE

If the initial resolution does not resolve the complaint to the satisfaction of the student, s/he, within seven (7) calendar days from the date the resolution was offered, may initiate the formal grievance procedure by filing a grievance in writing with BFIT’s Equal Employment Opportunity/Affirmative Action Officer, who is the Human Resource Director. This office is located on the 2nd floor of the Kendall Building.

The grievance shall contain a statement of all known facts pertaining to the alleged violation and shall be filed with the EEO/AA Officer. Within seven (7) calendar days from the date the formal grievance is filed, the EEO/AA Officer shall attempt to resolve the complaint through discussion with the complainant, the Dean of Student Services, and other involved persons.

STUDENT RIGHTS AND RESPONSIBILITIES
STUDENT RIGHTS AND RESPONSIBILITIES

Social Networking and Online Responsibility Policy
Benjamin Franklin Institute of Technology understands the popularity and usefulness of social networking sites and supports their use by students provided that:

- No offensive or inappropriate pictures are posted;
- No offensive or inappropriate comments are posted;
- Any information placed on the website(s) does not violate college, student athlete, or the student code of conduct;
- Inappropriate photos and/or comments posted on these sites do not depict team-related or college-identifiable activities (including wearing/using team uniforms or gear inappropriately).

Students must remember that they are representatives of Benjamin Franklin Institute of Technology. Please keep the following in mind as you participate on social networking websites:

- Before participating in any online community, understand that anything posted online may be available to anyone in the world. Any text or photo placed online may become the property of the site(s) and may be completely out of your control the moment it is placed online - even if you limit access to your site.
- You should not post any information, photos or other items online that could embarrass you, your family, your student club or organization, your team, or athletes at Benjamin Franklin Institute of Technology. This includes information that may be posted by others on your page.
- Never post your home address, local address phone number(s), birth date or other personal information. You could be a target of predators.
- Student Services administrators may monitor these web sites.
- Student-athletes could face discipline and even dismissal for violations of team, department, college and/or NJCAA policies.

Law enforcement agencies may monitor these websites regularly as may potential employers and internship supervisors as a way of screening applicants. In addition, many college programs and scholarship committees also search these sites to screen candidates. BFIT student athletes and student leaders should be very careful when using online social networking sites and keep in mind that sanctions may be imposed, including the loss of your eligibility to participate on teams or in organizations, if these sites are used improperly or depict inappropriate, embarrassing or dangerous behaviors.
Academic Affairs

The Benjamin Franklin Institute of Technology offers a range of technical programs that lead to a variety of careers and further educational opportunities. They range from one-year certificates in automotive maintenance, practical electricity, and HVAC&R to two-year academic degrees in industrial technologies, as well as engineering technologies designed to prepare students for transfer to four-year degree programs.

All of our programs provide hands-on laboratory work combined with classroom technical concepts and a strong general education component.

Academic Development provides students with skill-building courses to promote academic success in their major field of study.

Automotive offers an associate in automotive technology and bachelor degree in automotive management, as well as a certificate in automotive maintenance, through an array of courses in engines, electricity, fuels, diagnosis, and repair.

Building Technology offers an associate degree program in building technology and design that provides an introduction to architectural concepts and skills pertaining to the design and construction and management of facilities (buildings), preparing students for careers in architecture, construction, building technologies and facilities management. The Department also offers an associate degree in construction management which prepares students to work on construction project teams for residential, commercial, buildings and highways.

Computer Technology offers four degree programs: an associate degree in computer engineering technology that provides a solid basis for transfer to a four-year engineering technology degree program; an associate degree in computer technology that prepares students for work in computer system operation and maintenance or systems administration; and an associate and bachelor degree in health information technology that prepares students for employment working in medical settings managing electronic health records and systems.

Electrical Technology offers an associate degree in electrical technology and a certificate in practical electricity, both of which provide classroom hours and hands-on training in electrical design and layout and instruction in the National Electrical Code. Successful completion of these programs fulfill the Massachusetts Board of State Examiners of Electrician’s academic requirements towards Journeyman Electrician licensure by providing 600 hours of classroom instruction.

Electronics Engineering Technology offers an associate degree program in electronic engineering technology, which prepares students for work in industry, as well as for transfer to bachelor degree programs in electronics, business, computers, or engineering. The Department also offers an associate degree program in biomedical engineering technology (medical electronics), which prepares students to work as Biomedical Technicians in a hospital or industry setting. Opportunities to pursue advanced degrees in business, electronics, or IT are available.

Humanities and Social Sciences provides a range of courses in composition, communication, and the social sciences that provide general education to enable and complement the technical courses.

Mathematics and Physics teaches the concepts that underlie all of the technical specialties of the college, offering mathematics courses that emphasize theory and applications, as well as classroom and laboratory physics.

Mechanical Engineering Technology prepares graduates for immediate employment as technicians and for further engineering study.

A one-year certificate program in heating, ventilation, air conditioning and refrigeration (HVAC&R) is also available, leading to work in this field.

Eye Health Technology Department offers an associate degree in Opticianry offering a wide range of technical courses such as Ophthalmic Design and Contact Lens theory to prepare individuals for a career as an optician. The Eye Health Technology department also offers a one-year certificate in Ophthalmic Assisting. This program prepares students for entry level careers, assisting Optometrists and Ophthalmologists.

The Technology Business and Management Department will allow graduates to assist with external and internal customer service, financial analysis of technical products, human resource management of technical staff, and marketing.

Lufkin Memorial Library

The Lufkin Memorial Library provides the information and resources necessary to meet the needs of the college’s educational programs. In support of this mission, the library offers collections, services and programming that facilitate effective use of information and acquisition of information literacy skills. The library provides information and instruction in multiple formats to meet these needs and embraces appropriate technologies to enhance research and learning.

The Lufkin Library, located on the first floor of the BFIT Union Building in Room U108, has approximately 5000 physical volumes, 25 print periodicals, access to over 30,000 electronic books, and 26 online databases with access to full-text resources. The library is open 60-hours per week and a reference librarian is on-duty at all times. A secure wireless internet connection is accessible in the library.

The Lufkin Library is a member of the Massachusetts Library System, a state-supported collaborative that fosters cooperation, communication, innovation, and sharing among member libraries of all types, and a member of Lyrasis, the nation’s largest regional membership organization serving libraries and information professionals.

For further information on library services, please visit our webpage: http://www.bfit.edu/Academics/Library.
Department of Career Services and Industry Partnerships (DCSIP)
The Department of Career Services and Industry Partnerships (DCSIP) has the dual mission of both building and maintaining close ties with industry and providing students and graduates with the tools necessary to start and advance in their careers. By fostering relationships with industry partners, DCSIP helps to ensure that our programs remain relevant to workforce needs and that we can identify and secure employment opportunities for our students. The department also coordinates and oversees all required and voluntary internship programs, posts employment and volunteer opportunities on the student portal and supports students in transferring to four-year programs after graduation.

As part of the Department of Career Services and Industry Partnerships, The Office of Career Services (OCS) is charged with providing direct assistance to BFIT students. Each semester OCS conducts workshops to help students with career readiness in preparation for their job search. Specifically, students are assisted in identifying potential employers, preparing a résumé and letters of application, and interviewing successfully. Students are coached in how to use the Internet and social media to obtain employment. OCS encourages students to schedule an appointment for individual assistance and career planning in addition to attending workshops. As a mandatory requirement for graduation, OCS conducts Career Success Seminars as a means to prepare students for entry into the workforce or continue their education.

During the fall semester, OCS hosts a Part-Time Job Fair to provide students with job opportunities while attending college. During the spring semester, OCS hosts an Annual Career Fair where employment recruiters meet with and interview prospective graduates for employment and internship opportunities and a Spring College Transfer Fair where representatives of four-year schools can meet interested students. Throughout the year, many companies visit our campus to meet with students and conduct on-site interviews for available positions.

Graduates are strongly encouraged to maintain contact with the Department of Career Services and Industry Partnerships, which offers alumni services including job searching assistance throughout their careers.

</tbody>
</table>

CALCULATING GRADE POINT AVERAGE (GPA)
The GPA demonstrates the level of success in college studies. It is based on the earned grade (the weight of each is shown above) and the number of credit hours (see individual course descriptions for credit hour details) for each course. To calculate the GPA, multiply the earned grade weight of each course by its assigned credit hour(s). The sum of these is then divided by the sum of the total semester credit hours for the courses included in the calculation. The result is the GPA.

DISTRIBUTION OF GRADES
All midterm and final grade reports are accessed through the Student Portal unless other arrangements are made.

Dean’s List
The Dean’s List comprises those students who have a grade index of 3.5 or higher, have no current grade below C, and have successfully completed a minimum of 12 credit hours during the semester.

Attendance Policy
Students of the Benjamin Franklin Institute of Technology are expected to attend all classes. Attendance is taken at each class meeting and absences become a part of students’ records. The College recognizes that occasions may arise that prevent students from attending class.

If this occurs, a student should talk to the instructor as soon as possible to determine any missed work. It is important for students to understand that they are responsible for any work missed and that missed classes and/or work can seriously harm grades.

As a guide for students who wish to avoid failing grades, the College has established a fixed number of hours a student might be able to miss in a class before falling into the danger of failing for lack of attendance. These fixed hours are determined by multiplying the total credit hours for the course by two. Once a student has exceeded this maximum in any class, that student may be strongly advised to withdraw from the course. Two consecutive weeks of absences may result in an automatic withdrawal from the BFIT. Some courses and programs may have additional consequences for missing class time. Look closely at course syllabi and other documents that will spell out these policies.
**Add/Drop Period**

After a student is pre-registered, course changes can be made through the Add/Drop period. For 15-week courses, this period lasts through the second week of classes and for 7-week courses, the Add/Drop period ends after the first week of classes. A student must attend at least one class session of each course before the end of the add/drop period to remain on the course roster. Please refer to the Academic Calendar for specific dates. All course changes must be made through the Registrar’s Office. No change will be made after this period except through the written consent of the appropriate instructor.

**Incomplete Grades**

The incomplete (I) grade is appropriate in cases where students have made a good faith effort to finish a course on time but have not done so due to factors out of their control. This grade is reserved for cases where the unfinished work can be clearly identified and completed within a short period of time. This agreement must be made between both the student and instructor before grades are submitted at the end of the semester. To assign the incomplete grade the instructor must send an e-mail to the Dean of Academic Affairs with a copy to the Registrar’s Office stating the student’s name, the course name, the course’s current grade in the course, and the reason for the request. Attach to the message a completion plan that meets the following semesters add/drop deadline, approved by the instructor and the student, that includes a list of work still required with a brief description of when and how it will be completed. The incomplete must be made up before the add/drop deadline of the following semester or it will be changed to an F (failure). Any request for extension beyond the add/drop period must be made in writing to the Instructor and the Dean of Academic Affairs before the end of the deadline and the Registrar should be notified if an extension is granted.

**Course Withdrawal**

A student may withdraw from a course through the tenth (10th) week of class and receive a grade of “W” (withdrawal) recorded on the official transcript. After the tenth (10th) week, a grade of WF will be applied. In seven (7) week sessions, a withdrawal after the fourth (4th) week will result in a grade of WF.

**Co-requisites and Pre-requisites**

There are courses that provide foundational information required for successful continuation of a program. Co-requisites are courses that must be taken at the same time as another required course. Pre-requisites are courses that must be taken before continuing on to further course work.

**Transcript Policy**

- For each official transcript requested, the fee will be $8 (regular service up to 5 business days)
- Same day service will be available for $15 (student must come into office to pick up transcript)
- Express delivery service will be available via USPS for $40

**Satisfactory Academic Progress Policy**

BFIT monitors Satisfactory Academic Progress (SAP) to ensure the successful and timely completion of students’ academic careers. SAP is measured through evaluating the credits attempted and completed as well as the term and cumulative Grade Point Average (CGPA) of each student. The U.S. Department of Education requires all students that receive financial aid must make progress toward their program of study. The Registrar’s Office will evaluate students at the conclusion of each semester to determine if Satisfactory Academic Progress is being made. Students who leave the College and subsequently return will be evaluated for SAP before financial aid is offered, regardless of the term in which they return to BFIT.

SAP Standards are based on both qualitative and quantitative measurements.

- Cumulative Grade Point Average (CGPA) is the qualitative measurement for SAP. Students must maintain a minimum CGPA based on the number of credits attempted as noted below.

If a student repeats a course, the lower grade is replaced by the higher grade when calculating the CGPA. The lower grade will remain on the transcript and continue to be reflected in the term GPA. Once a credit is earned for a course, financial aid will only be available for a student to retake said course one time. Students retaking courses where credit has not been earned may be eligible for financial aid. Instances when students may need to retake a course in which they have already earned credits include the

**NOTE:** Students attempting at least 9 credits in a semester who fail to earn a Term GPA of at least 1.0 will be considered as not making Satisfactory Academic Progress
A C A D E M I C  A F F A I R S

need to improve their CGPA for graduation eligibility or if there is a requisite minimum passing grade before the student can progress to the next level of course sequence in his/her program.

- Completion Rate is one part of the quantitative measurements for SAP. Degree-seeking students with less than 60 credits attempted are required to successfully complete 50% of all attempted course work in their current degree program each semester. Degree-seeking students with 60 or more credits attempted are required to successfully complete 67% of all attempted course work in their current degree program each semester. Any course in which a student is enrolled after the regular add/drop period is considered an attempted course. A passing grade is considered to be successful completion of a course. Failure, withdrawal after the second week, or an Incomplete (I) grade in a class constitutes an attempted course which is not successfully completed. Each repeated course work attempt counts towards the credits attempted. Developmental credit and transfer credit will count towards both credits attempted and credits earned.

- Maximum Time Frame is the second part of the quantitative measurement for SAP. Students must complete their program within 150% of the program length. This is measured in terms of credits attempted and earned. For example, a 60-credit-hour degree must be completed without attempting more than 90 credits. Students exceeding the maximum time frame will be ineligible for additional financial aid. Transfer credits are counted in the total number of credits attempted. Developmental courses are excluded. Students reaching Maximum Time Frame lose all access to Financial Aid.

S A P  R E V I E W
At the end of each semester, the Registrar’s Office will review each student’s academic record to ensure that the student is meeting Satisfactory Academic Progress.

All students are categorized in three SAP groups: Good Standing, Academic Warning, and Academic Suspension.

If a student fails to meet satisfactory academic progress for one semester, he or she will be placed on Academic Warning and notified by letter to their permanent address. A student on Academic Warning retains their financial aid for an additional semester. Academic Warning means that students are no longer meeting the College’s academic progress requirements.

These students are required to meet with the Academic Warning Advisor within the first week of the semester and to meet with their academic advisors to create an academic success plan.

It is required that these students meet regularly with their academic advisor to assess the academic success plan and regularly utilize tutoring services. It might be required for the student on warning to attend a semester long Academic Achievement Seminar.

A student who fails to make Satisfactory Academic Progress for two consecutive semesters or whose CGPA falls below 1.0 will be placed on Academic Suspension and notified by letter to their permanent address.

A student placed on Academic Suspension will lose financial aid eligibility and if he or she is registered for classes in the next semester, those classes will be dropped. A student placed on Academic Suspension has the right to appeal the suspension. If a student’s appeal is accepted, that student’s academic status will be changed to Probation. In addition, a student must also appeal to the Financial Aid Office to restore financial aid eligibility.

S U S P E N S I O N  A P P E A L:
Appeal requests should be e-mailed as soon as possible after notification is received to the Associate Dean of Academic Affairs. Appeals submitted once the semester has begun might not be considered. Grounds for appeal include the student’s documented illness, the death or serious illness of an immediate family member, or other unusual circumstances. Documentation may be requested, depending on the nature of the appeal. Once the appeal is filed, it will be preliminarily reviewed by the Associate Dean of Academic Affairs and he/she might schedule an appointment with the appealing student. The Associate Dean will then convene the SAP Appeal Committee to consider the request and render a decision about the student’s ability to subsequently enroll. A member of the SAP Appeal Committee will contact the student with the committee’s decision and any necessary actions that the student will need to take prior to matriculating. If a student’s appeal is accepted, that student’s academic status will be changed to Probation. Students on probation should promptly appeal to the Director of Financial Aid for financial aid eligibility.

D I S M I S S A L:
If a student fails to make Satisfactory Academic Progress at the end of the probationary semester or if he or she fails to maintain the conditions and benchmarks agreed upon in the academic plan, that student will be Dismissed from the College. Students who have been dismissed from the College shall be able to appeal their dismissal to the Associate Dean of Academic Affairs after the period of time designated by the Satisfactory Academic Progress Appeal Committee (not including summer terms).
Family Educational Rights and Privacy Act

FERPA maintains the confidentiality of student educational records and protects the student’s right of access to those records in accordance with the Family Educational Rights and Privacy Act (FERPA) of 1974 (P.L. 93-380) as amended (P.L. 93-385) (also known as the Buckley Amendment).

FERPA affords students certain rights with respect to their educational records. They are:

- The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99) is a Federal law that protects the privacy of student education records. The law applies to all schools that receive funds under an applicable program of the U.S. Department of Education.
- FERPA gives parents certain rights with respect to their children’s education records. These rights transfer to the student when he or she reaches the age of 18 or attends a school beyond the high school level. Students to whom the rights have transferred are “eligible students.”
- Students have the right to inspect and review the student’s education records maintained by the school. Schools are not required to provide copies of records unless, for reasons such as great distance, it is impossible for parents or eligible students to review the records. Schools may charge a fee for copies.
- Students have the right to request that a school correct records which they believe to be inaccurate or misleading. If the school decides not to amend the record, the student then has the right to a formal hearing. After the hearing, if the school still decides not to amend the record, the student has the right to place a statement with the record, setting forth his or her view about the contested information.
- Generally, schools must have written permission from the student in order to release any information from a student’s education record. However, FERPA allows schools to disclose those records, without consent, to the following parties or under the following conditions (34 CFR § 99.31):
  - School officials with legitimate educational interest;
  - Other schools to which a student is transferring;
  - Specified officials for audit or evaluation purposes;
  - Appropriate parties in connection with financial aid to a student;
  - Organizations conducting certain studies for or on behalf of the school;
  - Accrediting organizations;
  - To comply with a judicial order or lawfully issued subpoena;
  - Appropriate officials in cases of health and safety emergencies; and
  - State and local authorities, within a juvenile justice system, pursuant to specific State law.

BFIT may disclose, without consent, “directory” information such as a student’s name, address, telephone number, e-mail, date and place of birth, honors and awards, and dates of attendance. However, schools must tell students about directory information and allow students a reasonable amount of time to request that the school not disclose directory information about them. Students should contact the Registrar if they do not want their directory information released. Schools must notify students annually of their rights under FERPA. The actual means of notification (special letter, student handbook, or newspaper article) is left to the discretion of each school.

For additional information or technical assistance, you may call (202) 260-3887 (voice). Individuals who use TDD may call the Federal Information Relay Service at 1-800-877-8339.

Or you may contact us at the following address:

Family Policy Compliance Office
U.S. Department of Education

Washington, D.C. 20202-5920

Academic Honesty

Honesty in all academic work is expected of every student at all times. This means each individual does his or her own work without assistance from other sources on any assignment or exam unless otherwise directed by the instructor. A violation of academic honesty can include but not be limited to:

- Plagiarism
- Falsifying documents
- Submitting the same assignment in multiple classes
- Copying or sharing work from another student
- Aiding and abetting cheating
- Using any form of technology, i.e. cell phones, laptops, etc

For more examples and full explanations of each, please see the advising page on the BFIT website. It is the responsibility of each student to understand BFIT’s expectations for academic honesty and to seek help in understanding the policy if necessary. It is important to note that ignorance is not an acceptable excuse.

To preserve the College’s reputation and integrity, cases of academic dishonesty will be reported and may face disciplinary action. Documentation of alleged violations, proceedings, and any resulting sanctions will be kept on file in the office of the Director of Student Success until a student has graduated from the college. This file may be utilized in the event of any further infraction of institutional rules or policies. The student’s advisor will be notified during any instance of academic dishonesty.
With any suspected act of dishonesty, the instructor will provide documentation of the incident and any supporting evidence to the Director of Student Success. Students will be contacted by the Director of Student Success to discuss the incident and methods of prevention for the future. Based on the student’s conduct history, the Director of Student Success may refer the case to the Student Conduct Board.

The range of sanctions and the procedures followed are outlined below; however, implementation of sanctions will lie with the Hearing Office or Student Conduct Board and may be adjusted. Faculty may be solicited for further information, appearing before the Student Conduct Board, or for recommendations for sanctioning.

**PROCEDURES AND SANCTIONING**

1. A first violation of academic honesty will result in a meeting with the Director of Student Success and may result in a failing grade for the assignment as well as an educational component to allow the student to learn from the process. Educational sanctions may include online modules, research or reflection essays, or other means to educate oneself or others on academic honesty.

2. A second violation of the academic honesty policy, whether this be in the same or a different course, will result in a meeting with the Director of Student Success or the Student Conduct Board, and may result in a grade of F for the final course grade. Due to the repeat nature of the incident, the student may be subject to increased sanctioning including academic probation for a minimum of one semester and increased educational sanctions.

3. A third violation of the academic honesty policy will result in an automatic F for the course in which the infraction occurred and may include further disciplinary action including suspension or expulsion from the college. All documentation and evidence will be placed in the student’s file and, in this case, may become a permanent record regardless of the student’s graduation status at the college. A mandatory meeting will take place with the Dean of Academic Affairs and the student will have the opportunity to bring one member of the college’s faculty or staff to serve as a support person. The support person will have the opportunity to speak on the student’s behalf at the student’s request.

*Note: If suspension is part of the sanction for a 3rd offense and a student is found responsible for another incident of Academic Honesty upon returning to the College, this may be grounds for automatic expulsion. Students will receive written notification within one week after meeting with a Hearing Officer or the Student Conduct Board.

**Appeal Process**

To initiate the appeal process, students will submit their appeal, electronically, in writing to the Associate Dean of Academic Affairs. Appeals must be received by the Associate Dean of Academic Affairs, electronically, within five (5) class days of the outcome of the conduct meeting.

Students must base an appeal on one or more specific aspects of the original conduct meeting:

- Procedural error
- Finding not supported by the evidence
- Excessive or inappropriate sanction
- New evidence not previously available

It is up to the student(s) appealing to be persuasive and professional in their appeal letter. Appeal arguments should detail any information that was not available at the time of the original conduct meeting, as well as any additional information that is provided by witnesses.

The outcome of an appeal is final. The Appeal Officer may make the following decisions:

- Uphold previous decision
- Revise previous decision
- Overturn previous decision
- Refer the case back to the original Conduct Officer for a rehearing (in case of procedural errors)

*Note: if multiple violations of academic honesty occur within a timeframe prior to required meetings taking place, the violations will be still be treated as individual occurrences and subject to disciplinary as outlined above.

**Grade and Attendance Action**

Any student who feels there has been an error in his or her grade or attendance record in any class should contact the instructor immediately and arrange a meeting to determine whether an error or omission has occurred. If a student is dissatisfied with the results, he/she should contact the Department Chair and Academic Advisor to arrange a meeting. If the faculty member is the Department Chair, students should contact the Associate Dean or Dean of Academic Affairs. Students are reminded that attendance at the college is very important.

**Change of Major**

All changes of major are handled during the registration process by the Advisor, Registrar’s Office, and student. If the advisor and student come to an agreement, the Registrar will be notified and will process the official change.

**Transfer of Credit**

Students who wish to take courses at other colleges to satisfy requirements in their programs at BFFT must:

- Obtain course descriptions from the prospective school.
- Receive endorsement from the appropriate Department Chair or Registrar at BFFT.
- If approval is given, the student must earn a grade of C or better in the course and provide an official transcript of this grade to the Registrar. Please note: the grade you receive will not be reflected in your grade point average at BFFT.
Graduation Requirements
Students in good standing who satisfy the following minimum requirements will be recommended by the faculty for graduation:

- A student must obtain a minimum GPA of 2.00 in all the credit-bearing courses in a student’s major as defined by the course catalog as reflected on the Student’s Degree Audit.
- Earn a cumulative grade point average of 2.00 or better

Degree seeking students who have no more than two requirements left to graduate may participate in the annual graduation ceremony provided they meet the requirements for graduation listed above. Students with three requirements left may appeal to the Registrar’s Office. Students in certificate programs who complete all of their requirements by the end of the summer semester will be allowed to participate in the graduation ceremony.

Students earning a grade point average of 3.5 or higher qualify for honors distinctions. Such honors are determined by a student’s cumulative grade point average once all required coursework is complete and is awarded in the following categories:

- Cum Laude: 3.50–3.74 cumulative grade point average
- Magna cum Laude: 3.75–3.89 cumulative grade point average
- Summa cum Laude: 3.90–4.00 cumulative grade point average

Petition to Graduate
Students who plan to graduate must inform the Registrar of their intention by filing a petition to graduate form at least four weeks before the commencement date. This form can be obtained from the Registrar’s Office and requires various signatures. Potential graduates will need to complete Financial Aid exit counseling and clear any college balance. The Registrar’s Office then verifies that all individual program requirements have been met and that the student is qualified to graduate.
AUTOMOTIVE TECHNOLOGY PROGRAMS

Automotive Technology (AS)
The automotive industry offers exciting and rewarding careers for people who have an interest in diagnosing and repairing mechanical components and computer/electrical circuitry.

Additionally, these careers contribute significantly to a cleaner environment and the safety of the general public. This industry is not limited to automobiles, as it covers a broad spectrum that includes marine, heavy-duty trucks, off-road equipment, recreational vehicles and stationary power plants.

Graduates of the Automotive Technology program are prepared for employment in the automotive industry as technicians, machinists, unit specialists, emission and performance diagnosticians, department managers, and manufacturer’s representatives.

The College enhances opportunities for employment through close association with dealerships and independent repair facilities throughout Massachusetts. Successful completion of this program provides the student with an Associate of Science degree and the opportunity to continue in the Bachelor of Science program in Automotive Management.

The Automotive Department strongly endorses Automotive Service Excellence (ASE) Certification. All of the Automotive Faculty are ASE Certified, and we encourage our students to take these tests for national certification, as they are ready.

Curriculum
In keeping with the College’s mission, the objectives of this Associate of Science program are to provide a theory-based automotive education, supported by practical experience that meets the College’s history of high academic standards. Additionally, these standards allow graduates to improve themselves personally, economically and socially, and to provide a foundation for lifelong learning. Degree requirements are further supported by general education components, including proficiency in oral and written communication, math, and physics.

The majority of this two-year program is devoted to automotive technical specialties, including actual work on live vehicles in the student Automotive Training Center. In addition to the mechanical technologies, the program is complemented by the study of mathematics, physics, humanities, and social sciences. Humanities, social sciences, and English courses comprise part of the curriculum to ensure that the graduates possess broader social visions and effective communication skills.

Special Admission Requirements for Automotive Technology Program
Due to the unique environment of automotive laboratories and repair facilities with regard to the safe operation of machinery, repair equipment, running engines, etc., the following is required of applicants to the Automotive Program:

- Correctable vision and hearing
- Ability to stand on one’s feet for long periods
- Ability to lift 50 pounds
- For continuation into the second year of the program involving the Automotive Training Center, students are required to have a valid driver’s license
- Students are required to purchase first-year and second-year tool sets

Facilities
The Automotive Department maintains laboratories for the study of automotive electricity, internal combustion engines, automatic and manual transmissions, chassis and brakes, hybrid and alternate fuels, engine performance as well as an eleven-bay working laboratory and a Drivability Clinic equipped with state-of-the-art equipment. Additionally, the College serves as an MA Certified Emissions Repair Facility.
Outcomes
Upon successful completion of the Associate Degree in Automotive Technology, the graduate will be able to:

- Demonstrate diagnostic strategies, using electronic/mechanical principles, to effectively repair vehicle management systems in accordance with manufacturers, State and Federal guidelines.
- Demonstrate, through practical example, written and verbal presentation, an understanding of automotive industry safety, emerging technologies, economics, government regulations and business models.
- Demonstrate an understanding of the internal combustion engine by utilizing diagnostic strategies that effectively repair an internal combustion engine.
- Understand AC electricity and demonstrate diagnostic repair strategies for automotive electrical components and systems that effectively repair electrical components.
- Utilize mathematical calculations, principles, and formulae to perform a variety of tasks related to automotive system repair.
- Effectively diagnose, repair, and adjust various subsystems, including: suspensions, brakes, transmissions, heating and air conditioning, and lighting systems.
- Identify and repair safety-related issues relative to automotive vehicles that concern the operator, passengers and general public.
- Demonstrate the proficient use of scan tools and other diagnostics test equipment that will aid in repairing the customers complaint with precision accuracy.
- Demonstrate specific techniques to determine the different failures between gasoline, diesel, hybrid and electric vehicles and understanding necessary repairs.

Automotive Management (BS)

Graduates of this program can establish mid- and upper-level management careers throughout the automotive and related industries. BFIT enhances employment opportunities through close association with Boston area dealerships, as well as national manufacturers such as Audi, BMW, Chrysler, Ford, General Motors, Honda, Nissan, Subaru, Toyota and Volkswagen.

The Automotive Department endorses ASE Certification. All members of the Automotive Faculty are ASE Certified Automobile Technicians. The Department also offers a student chapter of SAE.

Curriculum
The objectives of the Bachelor program, which build upon those of the Associate Degree, are to provide advanced-level education for management employment by combining practical, technical and academic experience for career progression.

This Bachelor Degree program devotes over one-third of the courses to technical or technically related studies, approximately one-quarter to business and management studies, one-fifth to mathematics and science, and one-fifth to communications/social sciences and the humanities.

Humanities, social science and English courses comprise part of the curriculum to ensure that graduates possess broader social visions and effective communication skills.

Special Admission Requirements for the Bachelor of Science Program
In order to qualify for this program, students must have either graduated from the BFIT Automotive Technology Associate Degree program or another accredited automotive associate degree program, and achieved an average grade of “C” in English composition courses.

Facilities
The Automotive Department maintains up-to-date laboratories for support of its theory-based courses. Students utilize modern computer laboratories, as well as receive hands-on automotive experience in a well equipped eleven-bay working laboratory, and a Drivability Clinic outfitted with the industry’s latest diagnostic tools. Additionally, the College serves as an MA Certified Emissions Repair Facility.

Outcomes
Upon completion of the Bachelor of Science degree in Automotive Technology, students will have expanded on associate degree outcomes and should have competency in the following:

- Demonstrate a mastery of electronic principles, as applicable to engine management and emissions systems; demonstrate logical diagnostic strategies, and effectively repair these systems in accordance with manufacturer’s procedures.
- Present written and verbal reports, as well as electronic presentations commensurate with management level standards.
- Demonstrate an understanding of the synergies among accounting, human relations, organization, finance, marketing and sales as related to managing a profit center or business section.
- Demonstrate an understanding of the laws and regulations relating to safety and the environments within the automotive industry.
- Demonstrate an understanding of the dynamic nature of the automotive industry with national and international economies by participating in a Capstone Project.

## Typical Course Sequence for Automotive Management (BS)

### JUNIOR YEAR

#### SEMESTER 1

- AT373 Advanced Engine Performance
- BS311 Microeconomics
- BS312 Advanced Concepts in Information Literacy
- MA265 Finite Mathematics
- TS310 General Chemistry

#### SEMESTER 2

- AT481 Automotive Marketing
- AT483 Computers in Auto Industry
- AT485 Senior Seminar I
- BS431 Management Accounting
- BS432 Human Resources Management
- HU/SS Elective

### SENIOR YEAR

#### SEMESTER 1

- AT481 Automotive Marketing
- AT483 Computers in Auto Industry
- AT485 Senior Seminar I
- BS431 Management Accounting
- BS432 Human Resources Management
- HU/SS Elective

#### SEMESTER 2

- AT474 Enhanced Emissions and Drivability
- AT482 Vehicle Appraisal
- AT494 Service Management
- AT495 Senior Seminar II
- HU/SS Elective
Automotive Technology (Certificate)

The Automotive Technology Department also offers a certificate program in automotive technology. The certificate program prepares students for entry level positions in the Automotive Technology field and contains 8 essential courses. Normally, the program can be completed in 1 year. This program follows all federal regulations regarding gainful employment.

- Demonstrate diagnostic strategies, using electronic/mechanical principles, to effectively repair vehicle management systems in accordance with manufacturers, State and Federal guidelines.
- Demonstrate through practical examples and written and verbal presentation, an understanding of automotive industry safety, emerging technologies, economics, government regulations and business models.
- Demonstrate an understanding of the internal combustion engine by utilizing diagnostic strategies that effectively repair an internal combustion engine.
- Understand DC electricity and demonstrate diagnostic repair strategies for automotive electrical components and systems that effectively repair electrical components.
- Utilize mathematical calculations, principles, and formulae to perform a variety of tasks related to automotive system repair.
- Identify and repair safety–related issues, relative to automotive vehicles, that concern the operator, passengers and general public.

SEMESTER 3
AT256    Automotive Lab–Certificate
AT274    Engine Performance II
Building Technology and Design (BT)

Building Technology offers an associate degree program in building technology and design that provides an introduction to architectural concepts and skills pertaining to the design, construction, and management of facilities (buildings), preparing students for careers in architecture, construction, building technologies and facilities management. This program enables its graduates to become skilled and knowledgeable contributors to the architectural/engineering, construction or facilities operations and maintenance fields. Students will be able to understand and produce a set of construction documents for buildings, residences, and other structures. Employment opportunities for which graduates of the program will qualify include entry level CAD/BIM drafter/ designer and technician level work in architecture, engineering, construction, facilities departments, manufacturing, and fabrication. The program also prepares students for further academic study in architecture, building construction, construction management and facilities management.

Many graduates decide to pursue bachelor degrees at other colleges or universities. Benjamin Franklin Institute of Technology students will receive credit for courses passed at BFIT with a grade of C or better towards a bachelor’s degree at BAC. BFIT has an articulation agreement with Wentworth Institute of Technology. Under this agreement BFIT graduates can enter Wentworth’s Facility Management Program as juniors upon successful graduation from BFIT and additional prerequisite courses at Wentworth.

Curriculum

This comprehensive program provides students with a thorough introduction to the fundamental skills and core competencies of building technology and design, including familiarization with up-to-date architectural office practices including computer-aided drawing and design, building information modeling, green building standards and integrated project delivery. Studio work allows students to explore design through various architectural projects and 3D model making. A general foundation education is provided with the inclusion of courses in physics, mathematics, English, technical writing, humanities, and technical electives.

Facilities

The Building Technology Department maintains drafting and computer-aided-drawing labs which provide students with ample opportunity to experience hands-on training in the Building Technology and Design field. The drafting lab, consisting of drafting tables, allows students to learn hands-on drafting and 3D model-making capabilities. The computer-aided-drawing labs provide students the ability to construct computer generated drawings in 2D and 3D formats with industry standard computer software. Desktop printers and a large scale plotter allow students to display their drawings in various viewable formats.

Outcomes

Upon successful completion of the Associate Degree in Building Technology and Design, the graduate will be able to:

- Draw and interpret architectural drawings including plans, elevations, sections and isometric views with the proper use of lineweight and use of architectural symbols and conventions appropriately by the use of hand drafting tools and the use of Computer Aided Drafting (CAD) and Building Information Modeling (BIM).
- Understand scale and measurement and their practical applications. Students will learn to measure and draft existing built conditions.
- Solve moderate to complex design problems through creative thinking and iteration.
- Create design compositions using organizing principles such as axis, symmetry, hierarchy, and grid. Understand that formal elements in a design such as points, lines, planes, and volumes can assume symbolic meanings subject to personal or cultural interpretation.
- Produce a set of construction documents for a wood frame, single-family residence using AutoCAD and Revit (BIM) computer programs.
- Analyze environmental factors influencing an architectural design including: cultural/historical, legal/economic, and climatic. Translate graphic diagrams into AutoCAD/Revit generated floor plans, sections, and elevations.
- Setup and operate the AutoCAD/Revit computer drafting programs including creating drawing parameters, opening, saving, and plotting drawings productively, utilizing basic AutoCAD/Revit commands to create and edit drawings.
- Utilize advanced principles of the AutoCAD/Revit program, including hatching, blocks, attributes definitions, external references, annotation scale and sheet sets in the creation of construction drawings. Perform at an acceptable level on a simulated AutoCAD/Revit assessment exams.
• Create and view three-dimensional drawings by various methods using the AutoCAD/Revit programs or other industry standard programs including building information modeling (BIM) software. Render a three-dimensional structure, including selecting views, placing lights, assembling a scene, and incorporating materials and landscape objects in a scene.

• Select materials that are compatible with the architectural and structural design regarding their appearance, strength, properties, and behavior against natural and manmade stressing forces.

• Understand the basic fundamentals involved in the analysis and design of structural/architectural building elements while incorporating this knowledge into the creation of construction drawings.

• Calculate heating and cooling loads in buildings, estimate the annual costs of various heating and cooling systems, evaluate site drainage, calculate water demand and drainage requirements for a building, and calculate building electrical loads.

• Understand the chronological development of architecture, comprehend the tools needed to have a critical appreciation, and possess an ability to able to present projects and to speak and write effectively on the history of architecture.

• Demonstrate knowledge of the fundamental principles or theories predominant in architecture and an understanding of the shifts which have occurred in the social, political, technological, ecological, and economic factors that shape the practice of architecture.

• Fundamental knowledge of building and accessibility codes, zoning by-laws and green building standards and their use in the design and construction of facilities.

Understanding the design and construction process based on industry standard manual of practice from project conception to facility management and perform at an acceptable level on an assessment exam.

Construction Management

Building Technology offers an associate degree in Construction Management providing graduates with a background of technical and organizational skills that apply to construction projects from conception to completion. Construction Management students study the skills necessary to manage resources, time, cost and quality with emphasis on team building. Students will also refine their ability to communicate, establish a foundation in math and science, and develop analytical and informational skills. Experiential components will be included to enhance the job-readiness of graduates and to build student engagement with the program.

The program includes technical courses in building technology and construction management and a general education core. The building technology courses are drawn from the Building Technology and Design program. These courses provide familiarity with the vocabulary of building and a thorough introduction to the techniques of the building industry. The courses establish a foundation in construction graphics, construction methods and material technologies, statics and strength of materials, sustainable building technologies and environmental systems.

The construction management courses develop the variety of skill areas that support a successful construction firm. These are taught by BTD full time faculty and selected adjuncts.

Outcomes

Upon successful completion of the associate degree in CM, the graduate will be able to:

- Apply knowledge in planning, budgeting, and scheduling of labor, materials and equipment;
- Apply quality standards in construction;
- Communicate in speech and in writing;
- Estimate job costs and requirements for construction projects;
- Identify construction project objectives and assist in their execution;
- Identify elements of sustainability in buildings and construction and explain their costs and benefits;
- Oversee project safety;
- Read and revise construction documents as a communication tool, including CAD files;
- Select contractors, sub-contractors and set project performance goals;
- Use knowledge of construction and management principles and practices to support continued learning;
- Work ethically and responsibly in the construction industry; and
- Work on teams to solve management and technical problems.

Computer Technology (AS)

The Computer Technology AS program provides students with the knowledge and training for a range of positions in information and computer technology based on the specific course selections of the student. A core curriculum is taken by all students in the program, consisting of courses in database management, networking, computer programming and system administration. The remainder of the curriculum consists of technical electives from key areas of modern computer technology. Students may further their studies in computer programming or system administration, or study PC repair or web development. All graduates leave the program prepared for positions as computer support specialists, junior network technicians and entry-level database administrators. In addition, depending on the choice of technical electives completed, graduates are qualified for entry-level positions as PC repair technicians, junior system administrators, entry-level computer programmers, or web developers. Students wishing to continue their education after graduation are encouraged to transfer directly to year 3 of the Bachelor of Science program in Health Information Technology at BFTT, or continue at another four-year BS program in networking, computer science or system administration.

The Computer Technology department facilities include more than 72 computer workstations in four classroom laboratory settings, virtual and “sandboxed” environments equipped with servers, workstations and networking equipment for hands-on server administration and data communications courses, and a computer diagnostics laboratory. All computer rooms are equipped with up-to-date software and multi-boot capability, where necessary, to provide all students with hands-on computer programming, installation, server administration and networking capabilities for their learning. The computer diagnostics laboratory provides the students with the necessary equipment to perform hardware and software troubleshooting.

Outcomes
Upon successful completion of the Associate Degree in Computer Technology, all graduates will be able to:
- Design and develop entry-level database application systems.
- Create, edit, and manipulate spreadsheets and charts to solve various problems.
- Provide beginner-level computer programming.
- Employ hardware/software knowledge to configure, install and maintain computer and network systems.
- Manage and maintain enterprise database application systems.
- Administer computer and network services and security.
- Apply and integrate the basic knowledge attained in server, networking, computer programming, mobile and database technologies to develop business solutions.
- Install, maintain, upgrade and manage Windows-based computer and related server and network systems.
- Understand and apply the fundamental knowledge of mathematics to solving computer related problems.
- Effectively communicate technical observations, results, issues, and successes, in both oral and written form.
- Effectively communicate technical observations, results, issues, and successes, in both oral and written form.
- Continue education toward a BS degree in four-year computer technology and related programs.
- Recognize the need for, and develop the ability to engage in, lifelong learning.
- Understand professional, ethical, and social responsibilities.

In addition to the above, upon successful completion of the technical electives of the Associate Degree in Computer Technology and depending on which electives have been completed, graduates will be able to do the following:
- Install, maintain, upgrade and manage Linux-based computer and related server and network systems.
- Provide intermediate-level computer programming.
- Develop basic mobile applications using Android.
- Understand mathematics, through calculus, and possess the ability to apply this knowledge to solve computer related problems.
- Design and develop websites using contemporary web design software.
- Design and develop websites using HTML, XHTML, style sheets, animation, and client scripting.
- Troubleshoot and repair common PC problems.
- Understand the primary roles of software development teams and work at one or more roles as part of a team implementing a solution to a real-world development project.
- Successfully pass the CompTIA A+ Essentials (220-801) and Practical Application (220-802) certification exams.

### Computer Engineering Technology (AS)

The Computer Engineering Technology program provides students with the knowledge and skills necessary for computer industry positions that address both computer hardware and software. Students are prepared for entry-level positions that may involve the testing, troubleshooting, repairing or installation of a variety of computer and networked systems. Other positions may include assisting engineers in the design and building of computer systems. Graduates of this program are well prepared to continue their education in Bachelor of Science in Computer Engineering Technology programs.

#### Curriculum

The curriculum is structured to provide a broad undergraduate education with students taking courses in each of the recognized areas of computer concepts and architecture, processors, network systems, digital circuits, analog circuits, and electronic principles. A strong foundation in physics and mathematics through calculus is provided so as to provide the student with a strong engineering foundation. The student’s education is rounded off with an emphasis in the humanities, English, and social sciences, which allow students to develop their written and oral presentation skills, promoting lifelong learning.

The curricula of many four-year college programs in Computer Engineering Technology are the same as their Electronic Engineering Technology programs during the first two years of study and are strongly hardware and electronics centered. Therefore the curriculum of this Computer Engineering technology program mirrors our Electronic Engineering Technology program, except for two networking courses. Prospective students interested in this program should also examine the Electronic Engineering Technology program description in this catalog for additional description of the curriculum.

The Computer Technology department facilities include more than 72 computer workstations in four classroom laboratory settings, virtual and “sandboxed” environments equipped with servers, workstations and networking equipment for hands-on server administration and data communications courses, and a computer diagnostics laboratory.

All computer rooms are equipped with up-to-date software and multi-boot capability, where necessary, to provide all students with hands-on computer programming, installation, server administration and networking capabilities for their learning. The computer diagnostics laboratory provides the students with the necessary equipment to perform hardware and software troubleshooting.
COMPUTER TECHNOLOGY

The electronics department laboratory is equipped to provide students ample and meaningful hands-on experience in breadboarding, testing, schematic capture, and simulation of analog and digital circuits. Students will typically spend four hours a week in the laboratory, confirming that the lecture material works in real life and is not unproven theory. Students follow the laboratory experiment with a report where the results are analyzed and discussed. In the laboratory, the students learn how to use standard test equipment to build circuits, create schematics, and test circuits using standard laboratory test equipment.

Outcomes
Upon successful completion of the Associate Degree in Computer Engineering Technology, the graduate will be able to:

- Analyze or troubleshoot in three major electronic engineering areas: Analog Circuits, Digital Circuits, and Processors.
- Recognize and apply fundamental knowledge of mathematics, especially algebra and trigonometry.
- Conduct experiments in teams, building or breadboarding, using basic test equipment and tools to measure performance, and to critically analyze and interpret data.
- Effectively communicate technical observations, results, issues, and successes or negotiate a change in design or procedure.
- Effectively discuss and communicate computer architecture, networking and electronics concepts.
- Apply computer skills to prepare technical documents or analyze data: using applications for word processing, spreadsheets, simple programming, schematic capture, and simulation.
- Read manuals and schematics and identify components on a printed wiring board.
- Apply proper laboratory procedures.

Faculty
EE designated courses are taught by faculty identified in the Electronic Engineering Technology program description, while CT designated courses are taught by faculty identified in the Computer Technology program description.

**Health Information Technology (AS)**

Health Information Technology (HIT) is improving outcomes and reducing costs in 21st century medicine. Doctors have more information available sooner when making critical decisions about treatment, and patients are better able to understand and participate in those decisions. HIT is the hardware and software, policies, and procedures that make possible the storage, retrieval, availability, and security of information essential to healthcare.

The old fashioned paper chart has been replaced by the electronic health record (EHR). The HIT program prepares graduates to manage the health databases that keep EHR’s up-to-date and secure. HIT Graduates know the guidelines and practices for these systems and have the ability to operate within industry-wide regulations and standards for healthcare information. HIT focuses on the interaction of healthcare information with storage and retrieval systems. Such systems must be designed, built and maintained to insure the reliability and security of patient records. These managers oversee the technological system and must keep up with current computer and software technology as well as legislative requirements.

The application of computer technology to healthcare information gives this program an interdisciplinary flavor that will appeal not only to first-time college students, but also to adults with credits or experience in related fields.

**Curriculum**

The Associate of Science (AS) degree in Health Information Technology (HIT) provides graduates with healthcare-related knowledge and skills grounded in knowledge from computer technology. Students will also refine their ability to communicate, establish a foundation in math and science, and develop civic and ethical awareness. The program includes three groups of coursework: healthcare, computer technology, and general education. The coursework is all drawn from BFIT’s bachelor’s program in HIT.

The healthcare group of courses provides a foundation in healthcare systems and vocabulary, health information technology, and information security. The computer technology courses provide sufficient exposure and training to give graduates a strong foundation in the information technology that supports healthcare systems. These courses include instruction in the fundamentals of operating systems, computer programming, database management and networking. General education courses provide a foundation in communications, critical thinking, mathematics, and science for learning and practice in health information technology and will also provide substantial development of the institutional values we expect in all BFIT graduates.

The Associate in Science in Health Information Technology prepares graduates for immediate employment in technical support for healthcare providers and others who rely on HIT systems. For students interested in additional training and education, the AS in HIT can serve as excellent preparation for transfer to a Bachelor of Science program in Health Information Technology or Health Information Management.
Facilities
The Computer Technology department facilities include more than 72 computer workstations in four classroom laboratory settings, virtual and “sandboxed” environments equipped with servers, workstations and networking equipment for hands-on server administration and data communications courses, and a computer diagnostics laboratory.
All computer rooms are equipped with up-to-date software and multi-boot capability, where necessary, to provide all students with hands-on computer programming, installation, server administration and networking capabilities for their learning. The computer diagnostics laboratory provides the students with the necessary equipment to perform hardware and software troubleshooting.

Outcomes
Upon successful completion of the Associate Degree in HIT, the graduate will be able to:

- Design and develop entry-level database application systems.
- Create, edit, and manipulate spreadsheets and charts to solve various problems.
- Install, maintain, upgrade and manage Windows-based operating systems.
- Design and develop websites using contemporary web design software.
- Apply and integrate the basic knowledge attained in networking, computer programming, web and database technologies to support healthcare information solutions.
- Apply knowledge of healthcare concepts and terminology to assist users of computerized information storage and retrieval systems.
- Apply HIT communication standards, such as the HL7 messaging standard, to support the interoperability of health information systems.
- Effectively communicate technical observations, results, issues, and successes, in both speaking and writing.
- Explain the importance of HIT concepts such as meaningful use, health information exchange, and clinical decision support.
- Observe administrative, legal, and medical constraints and rules in the implementation and use of HIT systems.
- Provide entry-level computer programming and scripting to maintain and improve HIT systems.
- Recognize the need for and develop the ability to engage in lifelong learning.
- Support the administration of computer, network and web services and security.

- Understand mathematics at the level of college algebra and pre-calculus and apply this knowledge to solve HIT related problems.
- Understand professional, ethical, and social responsibilities.
- Use scientific knowledge, including basic principles of physiology, to guide work in HIT.

Health Information Technology (BS)

Health Information Technology (HIT) is improving outcomes and reducing costs in 21st century medicine. Doctors have more information available sooner when making critical decisions about treatment, and patients are better able to understand and participate in those decisions. HIT is the hardware and software, policies, and procedures that make possible the storage, retrieval, availability, and security of information essential to healthcare. The Bachelor of Science in Health Information Technology program prepares graduates to work as information technicians at physicians’ practices, healthcare agencies, and hospitals, or at the companies that create health information systems and keep them running.

The old fashioned paper chart has been replaced by the electronic health record (EHR). The HIT program prepares graduates to manage the health databases that keep EHR’s up-to-date and secure. HIT grads know the guidelines and practices for these systems and have the ability to operate within industry-wide regulations and standards for healthcare information. HIT focuses on the interaction of healthcare information with storage and retrieval systems. Such systems must be designed, built and maintained to insure the reliability and security of patient records. These managers oversee the technological system and must keep up with current computer and software technology as well as legislative requirements.

The application of computer technology to healthcare information gives this program an interdisciplinary flavor that will appeal not only to first-time college students, but also to adults with credits or experience in related fields. Transfer students are welcome from associate degree programs at BFIT and other colleges.

Curriculum

Students in the program receive in-depth instruction in both healthcare and the latest information technology to support the healthcare industries. Courses in healthcare include introduction to healthcare systems, medical terminology, medical coding and classification, healthcare compliance and contemporary ethical and legal issues. Courses in computer technology focus on hands-on training in use of health databases, networking and information security. As part of the senior year, students will complete a workplace internship at a local medical facility, and a capstone project where they will engage in problem-based learning to tackle a challenge drawn from industry.

Facilities

The Computer Technology department facilities include more than 72 computer workstations in four classroom laboratory settings, virtual and “sandboxed” environments equipped with servers, workstations and networking equipment for hands-on server administration and data communications courses, and a computer diagnostics laboratory.

All computer rooms are equipped with up-to-date software and multi-boot capability, where necessary, to provide all students with hands-on computer programming, installation, server administration and networking capabilities for their learning. The computer diagnostics laboratory provides the students with the necessary equipment to perform hardware and software troubleshooting.

Outcomes

Upon successful completion of the Bachelor’s Degree in HIT, the graduate will be able to:

- Design and develop entry-level database application systems.
- Create, edit, and manipulate spreadsheets and charts to solve various problems.
- Install, maintain, upgrade and manage Windows-based operating systems.
- Design and develop websites using contemporary web design software.
- Administer computer, network and web services and security.
- Apply and integrate the basic knowledge attained in networking, computer programming, scripting, web and database technologies to develop healthcare information solutions.
- Apply knowledge of healthcare concepts and terminology to the creation and maintenance of computerized information storage and retrieval systems.
- Apply HIT communication standards, such as the HL7 messaging standard, to improve and maintain the interoperability of health information systems.
- Effectively communicate technical observations, results, issues, and successes, in both speaking and writing.
- Explain the importance of HIT concepts such as meaningful use, health information exchange, and clinical decision support.
- Observe administrative, legal, and medical constraints and rules in the implementation and use of HIT systems.
- Provide entry-level computer programming and scripting to maintain and improve HIT systems.
- Recognize the need for and develop the ability to engage in lifelong learning.
- Understand mathematics, including statistics, and apply this knowledge to solve HIT related problems.
- Understand professional, ethical, and social responsibilities.
- Use scientific knowledge, including basic principles of physiology, to guide work in HIT.

Electrical Technology (AS)

The Electrical Technology program prepares students for ever increasing career opportunities within the electrical field. From the designing of construction projects in residential, commercial, and industrial areas to the completion of these projects, students experience all phases of an electrical project. A ten-hour OSHA certificate provides students with an understanding of job site safety. The Electrical Technology Associate Degree Program at BFIT fulfills the Massachusetts Board of State Examiners of Electrician’s academic requirements for Journeyman Electrician licensure by providing 600 hours of class room instruction in accordance with 237 CMR 13.06 and 22.01.

Experienced personnel in the trades, as well as state regulators, such as the Board of Electricians and the Division of Apprentice Training, assures that the program is aggressive and ever-changing, with new methods and technology. In addition, our material is constantly updated to conform to the National Electrical Code, which changes every three years. Graduates of our program have many entry level career options in the electrical industry including a direct pathway toward obtaining a Journeyman Electrician license, electrical contractor, and electrical support positions such as estimator, product sales representative, and designer.

Curriculum

The curriculum is structured to provide educational hours in both the classroom and laboratory setting. Students are offered a broad range of courses in the electrical field. Some of these courses include: DC and AC Circuit Theory, electrical design and layout, electrical machinery, photovoltaics and renewable energy, and low voltage systems and controls. Laboratory projects accompany most classes.

Facilities

The Electrical Department has three laboratories, which are equipped to provide students ample and meaningful hands-on experience in the electrical field. The three labs provide students with the opportunity to learn the basics of wiring, as well as the proper methods of application to the many theoretical principles of motors, transformers, and renewable energies.

Outcomes

Upon successful completion of the Associate Degree in Electrical Technology, the graduate will be able to:

- Comprehend and utilize current Electrical Industry Standards, including the National Electrical Code (NFPA 70), Massachusetts Electrical Code (527 CMR 12.00), and Standards for Electrical Safety in the Workplace (NFPA 70E).
- Identify and install electrical devices and equipment, utilizing a variety of wiring methods and practicing safe work habits.
- Design, analyze and install various electrical circuits and diagrams related to residential, commercial, and industrial applications.
- Perform electrical calculations, including Ohm’s law, wire sizing, branch-circuit overcurrent protection sizing, voltage drop, and residential service entrance.
- Design, analyze, and troubleshoot motor circuits and motor controls.
- Understand the need for renewable energies and evaluate alternative energy technologies.

Practical Electricity (Certificate)

According to the U.S. Department of Labor, electrician job growth will be higher than average, growing at a rate of 23% over the next decade (Bureau of Labor Statistics, U.S. Department of Labor, Occupational Outlook Handbook, 2012-13 Edition). Here in the state of Massachusetts, that growth rate is estimated to be even higher as many in the current workforce will be retiring in the next few years.

The Electrical Technology Department offers a twelve-month Certificate of Proficiency in Practical Electricity. This program fulfills the Massachusetts Board of State Examiners of Electrician’s academic requirements for Journeymen Electrician license. The student will be provided with 500 hours of class room instruction in accordance with 237 CMR 20.06 and 22.00. The course of study includes the theoretical application of electricity as applied to the electrical construction industry and relevant Electrical Code requirements necessary to design and install a complain installation. A laboratory component accompanies nearly every course and provides practical, hands-on skills that are desired of apprentice electricians seeking employment.

Through a blend of lecture and laboratory classes, the certificate program provides a deep introductory knowledge of the electrical field. Upon successful completion, graduates are well positioned to start learning on-the-job while having foundational understanding of electrical principles.

Curriculum
The curriculum is aligned with the learning objectives outlined in 237 CMR 22, as mandated by the Massachusetts State Board of Examiners of Electricians. Courses include topics such as DC and AC circuit theory, electrical code and wiring lab, electrical machines, and low voltage systems. Laboratory projects accompany all classes.

Facilities
The Practical Electricity program utilizes three laboratories, which are equipped to provide students ample and meaningful hands-on experience in the electrical field. The three labs provide students with the opportunity to learn the basics of wiring, as well as the design methods of application to the many theoretical principles of motors, transformers, low voltage and renewable energy systems. The three labs are the Wiring Method lab, the Electro-Mechanical lab, and the Renewable Energy lab.

Outcomes
Upon successful completion of the Practical Electricity Certificate program, the graduate will be able to:

- Comprehend and utilize current Electrical Industry Standards, including the National Electrical Code (NFPA 70), Massachusetts Electrical Code (527 CMR 12.00), and Standards for Electrical Safety in the Workplace (NFPA 70E).
- Identify and install electrical devices and equipment, utilizing a variety of wiring methods and practicing safe work habits.
- Design, analyze and install various electrical circuits and diagrams related to residential, commercial, and industrial applications.
- Perform electrical calculations, including Ohm’s law, wire sizing, branch-circuit overcurrent protection sizing, voltage drop, and residential service entrance.
- Design, analyze, and troubleshoot motor circuits and motor controls.

Electronic Engineering Technology (AS)

The field of Electronic Engineering Technology involves testing, troubleshooting, repairing, or installing a variety of electronic printed circuit boards or systems. Graduates are electronic technicians that may perform a broad range of tasks for manufacturing companies or providers of telephone or data networks. An electronic technician generally works under the supervision of engineers and may support design engineers developing a new product by assembling prototypes and testing them to verify their operation. Or the technician may be in the manufacturing department and test and repair products. They also may repair customer products, provide technical support to customers, or assist the sales organization with technical support. Datacom and telecom companies employ electronic technicians to install and maintain their networks. Technicians are hands-on practitioners who know how to apply algebra and trigonometry to real-life problems, or run computer simulations to analyze circuits.

To advance in these careers, it is also important to develop skills in communicating the problems, ideas and solutions to others in the company. Those graduates in departments that interface with customers must also develop people skills.

Many graduates choose to continue their education and are accepted into Electronic Technology programs leading to the Bachelor of Science degree. Articulation agreements are in place with a number of local universities. Alternatively, a graduate could choose to pursue a degree in business, acquiring both technical and business skills. Others who choose to enter the workforce are employed by companies producing consumer products, medical device manufacturers, technology for other companies, defense contractors, or network providers.

Curriculum

The curriculum is structured to provide a broad education, with students taking courses in each of the recognized areas of analog circuits, digital circuits, processors, writing skills, presentation skills, algebra, trigonometry, elementary calculus, computer application, programming, and problem solving skills. Typically the electronics courses are three hours of lecture and two hours of laboratory work, reinforcing concepts and principles taught in the classroom and providing extensive hands-on education.

Facilities

The electronics laboratory is equipped to provide students ample and meaningful hands-on experience in breadboarding, testing, schematic capture, and simulation of analog and digital circuits. Students will typically spend four hours a week in the laboratory, confirming that the lecture material works in real life and is not unproven theory. Students follow the laboratory experiment with a report where the results are analyzed and discussed. In the laboratory, the students learn how to use standard test equipment to build circuits, create schematics, and test circuits using standard laboratory test equipment.

Outcomes

By the time of graduation, the Electronic Engineering Technology graduate will be able to:

● Analyze or troubleshoot in three major electronic engineering areas: analog circuits, digital circuits, and processors.
● Recognize and apply fundamental knowledge of mathematics, especially algebra and trigonometry.
● Conduct experiments in teams, building or breadboarding, using basic test equipment and tools to measure performance, and to critically analyze and interpret data.
● Effectively communicate either technical observations, results, issues, and successes or negotiate a change in design or procedure.
● Apply computer skills for preparing technical documents or analyzing data: using applications for word processing, spreadsheets, simple programming, schematic capture, and simulation.
● Calculate costs.
● Read manuals and schematics and identify components on a printed wiring board.
● Apply proper laboratory procedures.

Biomedical Engineering Technology (Medical Electronics) (AS)

Biomedical Engineering Technology appeals to students desiring to be technical, and, at the same time, devote their careers to saving lives by helping doctors, nurses and hospital patients. Graduates become biomedical technicians and maintain, repair, and calibrate the electronic medical instruments used in healthcare. To advance in these careers, it is also important to develop skills in communicating problems, ideas and solutions to other employees.

This program will develop troubleshooting skills in analog circuits, digital circuits, and processors. In addition, they must understand physiology, medical terminology and the operation of medical instruments such as EKG instruments, defibrillators, and incubators.

In the workforce, graduates are typically employed by hospitals or a subcontractor for a hospital. Some graduates are employed by manufacturers of medical instruments or medical devices, or as field support technicians, after earning experience in the field. Although this program’s primary objective is workforce development, some graduates choose to continue their education and are accepted into Electronic Engineering Technology bachelor degree programs. Others pursue a degree in business, or continue their education in clinical programs. However, students intending to continue full-time education toward a bachelor’s degree in engineering technology are encouraged to consider the Electronic Engineering Technology Program.

Curriculum

The curriculum is structured to provide a broad education, with students taking courses in each of the recognized areas of analog circuits, digital circuits, processor circuits and programming, writing skills, presentation skills, algebra and trigonometry. Typically, the electronics courses are three hours of lecture and two hours of laboratory work, reinforcing concepts and principles taught in the classroom and providing extensive hands-on education. The freshman year is identical to the Electronic Engineering Technology program and transfer between the two programs is easy during the first year. In the sophomore year, students learn about physiology, networking and medical instrumentation.

Facilities

The electronics laboratory is equipped to provide students ample and meaningful hands-on experience in breadboarding, testing, and schematic capture. Students will typically spend four hours a week in the laboratory, confirming that the lecture material works in real life and is not unproven theory. Second year students will be trained on the theory and operation of the medical instruments in late afternoon and evening courses at a local medical facility, and will also have an internship at a local hospital during their last Semester.

Outcomes

By the time of graduation, the Biomedical Engineering Technology graduate will be able to:

- Perform periodic maintenance or troubleshoot medical electronic instruments and devices.
- Recognize and apply fundamental knowledge of mathematics.
- Conduct experiments in teams, building or breadboarding, using basic test equipment and tools to measure performance, and to critically analyze and interpret data.
- Effectively communicate either technical observations, results, issues, and successes or negotiate a change in design or procedure.
- Apply computer skills for preparing technical documents or analyzing data, using applications for word processing, spreadsheets, simple programming, schematic capture, and simulation.
- Calculate costs.
- Read manuals and schematics and identify components in systems.

### Typical Course Sequence for Biomedical Engineering Technology (AS)

#### SEMESTER 1

- **EE101**: Intro to Electro-Mechanical Systems
- **EE110**: DC Circuits
- **EE123**: Digital Principles
- **EN150**: College Composition I
- **MA120**: College Algebra

#### SEMESTER 2

- **CT143**: Introduction to Programming Logic and C++
- **EE113**: AC Circuits
- **EE122**: Electronics I
- **EN140**: College Composition II
- **MA130**: Pre-Calculus

#### SEMESTER 3

- **EE223**: Electronics II
- **EN320**: Technical Communications
- **MD233**: Medical Instrumentation I
- **MD238**: Human Physiology
- **HU/SS**: Elective

#### SEMESTER 4

- **EE240**: Embedded Processors
- **EE254**: Networking for End Users
- **MD235**: Medical Instrumentation II
- **MD242**: Internship
- **PH222**: Physics I
- **PH225**: Physics Lab I
Heating, Ventilation, Air Conditioning, and Refrigeration (Certificate)

Heating, Ventilation, Air Conditioning, and Refrigeration (HVAC&R) is rated by the U.S. Department of Labor as one of the fastest growing job areas in the country. There are excellent employment opportunities available, both locally and nationally, for graduates of certificate programs.

This nine-month, 800-hour, full-time day or evening certificate program is designed to provide students with the knowledge and hands-on skills to become successful HVAC&R technicians. HVAC&R technicians work for heating and cooling contractors, refrigeration and air conditioning service and repair shops, schools, hospitals, office buildings, a variety of industries, and local, state or federal governments.

Under the supervision of a licensed technician, the HVAC&R apprentices help with the installation, troubleshooting, diagnosis and repair of equipment. Upon successful completion of the program, students are credited with 2000 hours towards the requirement to sit for the Refrigeration Technician Examination. Today’s HVAC&R Technician needs to be EPA certified. BFIT’s HVAC&R program provides test preparation for the EPA certification. In addition, we also offer an R-410 A certificate and 10-hour OSHA Safety certificate, upon successful completion.

This program offers 150 hours of electrical code needed for state licensure and follows all federal regulations regarding gainful employment.

Curriculum
The course curriculum is structured to provide a basic knowledge of the refrigeration, air conditioning, and heating fields. Core courses in the first semester cover topics such as: refrigeration and heating principles, electricity for HVAC&R, safety in the HVAC&R field, and use of HVAC&R tools and equipment. An EPA course covering the reclamation and recycling of refrigerant completes the first semester. In the second semester of the program, students concentrate on commercial and industrial refrigeration, air conditioning and testing. This semester also covers heating, including oil and gas-fired units, and forced hot air and hydronic systems.

Facilities
The Benjamin Franklin Institute of Technology maintains a HVAC&R laboratory with two Hampden Engineering Trainers. HVAC&R Lab equipment gives students real world hands-on training on commercial refrigeration and air conditioning and also on oil and gas-fired burners. The HVAC&R Lab contains a wide variety of tools and equipment used in the heating and ventilation industry.

Outcomes
Upon successful completion of the HVAC&R Certificate, the graduate will be able to:

- Demonstrate the principles of refrigeration and air conditioning.
- Identify principles of different refrigerants and their temperature pressure relationships.
- Demonstrate a knowledge of refrigeration and air conditioning components, including compressors, evaporators, metering devices and condensers.
- Implement proper charging of refrigeration and air conditioning systems and proper leak protection methods.
- Solder and braze pipes and fittings.
- Test pressure and detect leaks.
- Recover, reclaim and recycle refrigerant in accordance with EPA and Mass. Dept. of Public Safety guidelines.
- Flare and swage tubing.
- Troubleshoot electrical and mechanical malfunctions of commercial and domestic units.
- Use HVAC&R tools and measuring devices effectively.

The HVAC&R program is also offered during the evening for students who are unable to study during the day. Students in the HVAC&R evening program study Monday through Thursday. The program normally begins in January and concludes the following August. Information about the course schedule for the HVAC&R evening program is available through the BFIT Admissions Office.

Mechanical Engineering Technology (AS)

The objective of the Mechanical Engineering Technology program is to prepare its graduates both for immediate employment as technicians and for further study at the Bachelor’s level in Mechanical Engineering Technology. This program maintains a close connection with industry. Its Industrial Advisory Committee, consisting of mechanical engineering and mechanical engineering technology professionals in Greater Boston and New England, meets periodically to evaluate the objectives, curriculum, and course content, to keep the program updated and practical.

With a strong foundation in manufacturing processes and CAD (SolidWorks®), graduates of the Mechanical Engineering Technology program are prepared for employment as Machinists, Mechanical Designers, Assistant Mechanical Engineers, Engineering Research Assistants, Mechanical Engineering Associates, Manufacturer’s Representatives, Specifications and Technical Specialists, etc. Those students who have successfully completed Calculus II and University Physics I and II are prepared with a solid and sound academic foundation to transfer to a four-year college or university to pursue a Bachelor’s Degree in Mechanical Engineering or Mechanical Engineering Technology.

Curriculum
The Mechanical Engineering Technology Program includes fundamental and advanced courses in statics, materials, thermodynamics, CAD with SolidWorks®, machine design with 3-D solid modeling design, manufacturing processes, and CNC machine programming.

Four semesters of mathematics are required for graduation. Students will be placed in an appropriate math course, based on a math skills assessment. It is recommended that students planning to transfer to a bachelor’s degree program, take math through Calculus II and University Physics I and II. Humanities, social sciences, and English courses comprise part of the curriculum to ensure the graduates possess broader social visions and proficient and effective communication skills.

Facilities
The Mechanical Engineering Technology Department maintains a CAD (SolidWorks®) classroom, a fabrication and material testing laboratory that includes CNC machines, joining equipment and an assortment of hand tools and measuring equipment.

Outcomes
Upon successful completion of the Associate Degree in Mechanical Engineering Technology, the graduate will be able to:

- Utilize SolidWorksTM to manufacture engineering drawings and to analyze interference fits and tolerances.
- Program and operate CNC equipment in an industrial environment.
- Understand manufacturing processes and their uses in industry.
- Design and build products and equipment for a changing technical environment.
- Demonstrate a knowledge of mathematics and the ability to apply this knowledge as practiced in Materials, Statics, Physics and Thermodynamics.
- Effectively communicate technical observations, results, issues and successes in both oral and written form.
- Demonstrate the fundamental skills necessary for continuing their education towards a bachelor’s degree in mechanical engineering technology or related fields.
- Understand professional, ethical and social responsibilities.
- Work effectively in a team-oriented/project-focused work environment.

Opticianry (AS)

The Opticianry program is fully supported by the Opticians Association of Massachusetts. The program has full accreditation from the Commission on Opticianry Accreditation (COA, 2013). The BFIT Opticianry program is the only program of its kind in Massachusetts, and one of only a few in all of New England.

The Opticianry program serves as the educational gateway for students of all ages, including adult learners and apprentice opticians. With a vibrant optical industry and continued need for qualified eye care professionals, there exists a tremendous opportunity for technically skilled and highly knowledgeable opticians.

The optical industry is experiencing tremendous growth. With this growth comes expanded regulations and increased requirements for becoming a licensed optician in Massachusetts.

The curriculum is designed to prepare the graduate to meet both the requirements for licensing in all states, including national and local certification exams and practical tests, as well as for entry into the profession of opticianry itself. Upon graduation, the student will be well versed and knowledgeable in all facets of opticianry, including spectacle design, fitting and dispensing, contact lens design and fitting, prescription and non-prescription fabrication and manufacturing, and special application optics.

The optical profession itself offers great diversity and versatility. Graduates will be able to work in many different environments ranging from HMO/medical offices to retail/high fashion optical boutiques, corporate and chain optical conglomerates to independent ownership. Graduates will be well versed in all aspects of optics as it relates to opticianry. Graduates will be qualified for positions involving spectacle design and dispensing, contact lens design and dispensing, optical laboratory finishing and management, optical business management or independent ownership. Many graduates of the opticianry program seek advanced degrees and/or certification related to business, management, orthoptics and health care management.

Curriculum

The two-year curriculum is comprehensive in design and has been modeled after opticianry accredited programs from across the country. As a member of the National Federation of Opticianry Schools (NFOS), the comprehensive curriculum is reviewed each year at the annual meeting.

Facilities

The college facilities include three dedicated classrooms for the opticianry program; a spectacle finishing lab, a contact lens fitting and dispensing clinic, and a prototype optical shop. The optical shop is open regular hours during the academic year and is operated by the opticianry students under the direct supervision of a licensed optician in order to serve the eyecare needs of the college community.

The finishing lab provides students with the opportunity to learn prescription spectacle fabrication, both as individual work projects and assignments, as well as the capability for conversion to a simulated high capacity wholesale optical laboratory.

The contact lens clinic serves as a model working environment classroom.

The contact lens lab provides the student an opportunity to work with contact lens related devices and instrumentation. In addition, the dispensing and fitting aspects of the laboratory will allow opportunities for contact lens related instruction and actual patient care.

Program Goals

The associate degree program in Opticianry will:

- Prepare students to complete successfully the American Board of Opticianry Examination, the National Contact Lens Examination, and the requirements for licensing in any state.
- Promote the highest technical and ethical standards in the practice and delivery of professional patient care.
- Provide students the opportunity to excel in all aspects of opticianry related to academic and practical knowledge, technical skill and professional level competence.
- Promote inter-disciplinary and cooperative patient care concepts in order to take advantage of the strengths of optometry and opticianry in solving patients’ vision care concerns and issues.
- Practice global awareness and ethical responsibility, fostering in students a commitment to civic engagement & volunteerism, leadership, and life-long learning through community-based learning projects and involvement with professional organizations, events and associations.
- Seek to eliminate hazardous waste and to reduce non-hazardous waste to the minimum levels economically and technically practical, and to be in full-compliance with all federal and state environmental regulations.
Outcomes
Upon successful completion of the degree, students will be able to perform the following professional responsibilities:

● Based upon a patient’s prescription, vision needs and lifestyle and desires, visualize and design appropriate solutions pertaining to prescription glasses and/or contact lenses.
● Design, fit and dispense prescription glasses and contact lenses
● Utilize and operate all forms of ophthalmic devices and instrumentation including keratometers, lensometers, biomicroscopes, corneal topographers, pupillometers and digital image measuring devices.
● Utilize and operate all finishing lab equipment including edgers, heat treating units, safety beveling units, drop ball testing, chemical treating units, blocking and layout devices and rimless edging devices.
● Inspect and verify spectacle and contact lenses for optical precision, proper and comfortable fit, and proper aesthetics.
● Evaluate and troubleshoot patient’s concerns and symptoms as they are related to the eyeglasses and contact lenses.
● Professionally and academically express optical technical skills and knowledge, both in an exam scenario, as well as in a clinical environment.

EYE HEALTH TECHNOLOGY PROGRAMS

Ophthalmic Assisting (Certificate)

The Ophthalmic Assisting program is supported by members of the Massachusetts Board of Eye Physicians and Surgeons. It is a unique program in that it offers a full one-year certificate curriculum and combines didactic academic studies with clinical experience within many of the most prestigious eye health medical centers in the Boston area.

The Ophthalmic Assisting program serves as the educational gateway for students of all ages, including adult learners and medical assistants. With a vibrant eye health medical profession, and continued need for qualified and skilled eye care professionals, there exists a tremendous opportunity for technically skilled and highly knowledgeable ophthalmic assistants.

Medical Assisting is projected to be one of the fastest-growing fields, especially for those with formal training or experience, along with certification. One branch of medical assisting, Ophthalmic Assisting, is an exciting field with numerous opportunities for personal and professional growth.

Graduates of the program will be able to provide and care for patients, while assisting ophthalmologists and optometrists in providing quality medical eye care. Students entering this field will learn valuable skills such as taking a patient’s medical history, doing diagnostic tests on patients, assisting during in-office procedures, and maintaining examination, diagnostic and surgical instruments and devices.

BFIT’s curriculum is designed to prepare students for entry into the field of ophthalmic assisting with a combination of classroom instruction and hands-on experience. Graduates of the program will be qualified to work in many different environments, ranging from private practices and multi-specialty clinics to academic practices that include research.

Personal qualifications for working as an Ophthalmic Assistant include enjoying helping people, having a desire for a career that supports professional growth and development, having an interest in working with technology, equipment, and computers, having a fascination for the medical world and having a desire to work in a professional setting that offers something different and exciting every day.

Graduates will have a foundation of knowledge and hands-on clinical skills that will prepare them for the certifying exams once they have completed the qualifying home study test and a minimum of six months full-time work under a licensed opthalmologist. Many of today’s senior-level technicians have advanced to higher levels of the profession and have attained even higher salaries. Employment opportunities include positions in private practice, multi-specialty clinics and academic practices, including research work. Many graduates find careers as Ophthalmic Technicians or seek advanced degrees in healthcare management or in business. This program follows all federal regulations regarding gainful employment.

Curriculum

The one-year curriculum is comprehensive in design and has been modeled after Ophthalmic assisting accredited programs from across the country.

Facilities

The college facilities include a “state-of-the-art” refracting lane, as well as an instrumentation laboratory.

Hands-on laboratory and clinical observations will be conducted at nearby Boston area Ophthalmology practices, allowing students the opportunity to learn their skills and technical knowledge, using the most advanced diagnostic instrumentation available to eye health professionals.

Program Goals

Ophthalmic Assistants provide support services to the Ophthalmologist.

The Ophthalmic Assistant is an important member of the eye care team, supplying vital information to the physician who is treating the patient. Upon successful completion of the Ophthalmic Assisting program, the student will be able to:

- Take a general medical and ophthalmic history.
- Take basic anatomical and functional measurements.
- Test ocular functions (e.g. visual acuity and basic color vision tests).
- Verify eyeglass prescriptions.
- Administer topical ophthalmic medications under physician direction.
- Instruct the patient in personal eye care.
- Care for and maintain ophthalmic instruments and equipment.
- Care for, maintain, and sterilize surgical instruments.

Technology Business & Management (AS)

Associate in Science
For an enterprise to succeed with a technology-based product or service, it must overcome technical challenges in design, implementation, and production. But it is not enough to overcome technical challenges at any cost. Rather, processes must make business sense. Furthermore, all aspects of an operation should work together smoothly. For example, a manufacturer of telecommunications equipment may need workers with knowledge of machining, programming, or troubleshooting. Graduates of BFIT’s programs in Mechanical, Computer Technology, or Electronics would be good choices to fill these roles. But engineers and managers at the same company might be looking at changes in the supply chain to improve the profitability of a unit. Support for those changes requires someone who understands the language of business. Likewise, work cells might be re-organized to reduce cost or improve turnaround time. Again someone with knowledge of business and management practices would be more valuable in support of such changes than someone who understands only technological aspects of the work.

This program develops skills and knowledge to allow graduates to assist with external and internal customer service, financial analysis of technical products, human resource management of technical staff, and marketing.

According to a recent report by the Georgetown Center on Education and the Workforce, the highest paying jobs for individuals who have earned an associate degree are in business and manufacturing, the highest category within those fields is operations management, which requires a blending of business, management and technical skill. These areas are also among the six with the greatest number of openings for middle skill jobs in the next seven years.

Grads of the TBM program would be expected to go directly to work, though some would wish to seek additional education in business or technology. In addition, current members of the workforce (or job seekers) who have already earned a degree may be able to leverage their previous learning to earn this degree in approximately one year of full time study.

Curriculum
The associate degree in Technology Business & Management (TBM) provides graduates with essential business skills grounded in knowledge from a technological field.
TBM majors study technology more broadly though not to the same depth as someone specializing in an area. Students would also refine their ability to communicate, establish a foundation in math and science, and develop ethical awareness.

Two experiential components (a Summer Seminar and a Senior Capstone) would be included to enhance the job-readiness of graduates and to build student engagement with the program.

The program would include three groups of coursework, a business and management core, general education, and a technological specialty. The business and management core provides a foundation in the variety of skill areas that support a successful business.

Facilities
The Technology Business & Management program utilizes facilities from the Computer Technology, Electronics Engineering Technology, and Mechanical Engineering Technology departments at the College. The students in the program will make use of the CAD (SolidWorks) classroom, the electronics laboratory, and the computer laboratories that include more than 72 computer workstations in four classrooms laboratory settings.
Outcomes
Upon completion of the associate degree program in Technology Business and Management, the graduate will be able to:

- Speak and write clearly and persuasively on business and technical topics.
- Communicate business issues to a technical audience and technical issues to a business audience.
- Contribute to effective teams.
- Apply financial concepts and techniques to the analysis of business proposals.
- Describe and understand technological challenges facing a business.
- Understand and use the terminology of computer science, manufacturing, or other technology fields.
- Apply corporate responsibility and ethics to support sound decisions.
- Describe marketing principles and apply them to promote a product or service.
- Develop a technical idea into a business plan.
- Apply lean principles and quality measures within a process of continuous improvement.

EE101  Introduction to Electromechanical Systems
HU/SS  Elective
ME105  CAD with SolidWorks
Department of Academic Development

Students enter the Benjamin Franklin Institute of Technology with varying levels of academic preparation. We feel it is important for all students to begin their major studies at BFIT on the same academic level so that everyone has an equal opportunity to make the most of their education. The Department of Academic Development offers a range of courses for students needing additional preparation for the rigorous academics required in the pursuit of a college degree at BFIT. Courses focus on the specific academic skills and content required for each individual’s success in the engineering and industrial technologies.

Depending on placement and performance, a student may need one or more additional semesters of course work in order to complete the requirements for an Associate degree. In order to continue the student’s major course of study, the following criteria must be met: passing grades in all courses, grades of C or better in all mathematics and language courses and satisfactory completion of course requirements.

Each student’s course of study will be customized to address the individual’s strengths and needs.

Curriculum

Academic Development courses are designed to build the skills necessary for more advanced study in mathematics, technology, language acquisition, communication and reading and writing. In addition, seminar courses provide students with the academic and professionalism skills needed to be successful in college and the workplace. Since the assimilation of basic math skills is central to success in technology studies, students needing to develop their math skills will begin their technical studies upon successful completion of their foundational math courses. Students needing extensive work on their language skills will successfully complete EN090 and/or EN091. Students learn how to employ effective communication skills by taking either EN110 or EN112.

2014 / 2015 COURSE CATALOG  83
GENERAL EDUCATION

Outcomes
Upon successful completion of the Academic Development courses, the student will be able to:

- Demonstrate proficiency in the basic concepts of algebra.
- Demonstrate proficiency in basic reading skills and writing conventions and be capable of addressing increasingly complex academic writing tasks.
- Employ effective communications skills in a variety of academic and professional settings, while working in teams and individually.
- Employ efficient study skills, note-taking, and critical thinking.

Faculty
Tanya Rogers, Chair
Instructor Staff: Rachelle Madurin, Tiffany Probasco, Brett Wellman
Humanities and Social Sciences

The Department of Humanities and Social Sciences provides a means for exploring human experience and is dedicated to the growth and support of the educated student. It provides a core curriculum that promotes effective communication skills, critical thinking, teamwork, information literacy, professionalism, ethical decision-making, and negotiation skills. Through study in these courses, students gain historical, cultural, social and global awareness, thereby challenging the intellect and instilling a basis for lifelong learning.

Curriculum

The Humanities and Social Sciences curriculum provides 12 to 15 credits of courses for each technical degree program. All Humanities and Social Science courses require students to write, read, research, and to participate in discussions, group projects, and presentations. All of these skills are necessary ingredients for the successful student in any technical program, higher education, or in the workforce.

Two standard three-credit English courses, EN130 College Composition I, and EN140 College Composition II, are required for all degree students in the first two semesters.

The goal of these writing courses is to develop cognitive, as well as effective written and oral communication skills, which are supported and advanced by the technical programs. Students are expected to become independent writers, thinkers, and researchers by evaluating and assessing their own approaches and processes.

The department also offers many elective courses to satisfy the remaining 6 to 9 credits required. While the electives are designed to promote lifelong learning, these courses also build on the critical thinking, reading, and writing practiced in College Composition I and II. Throughout all courses, the department aims to instill a sense of professionalism, as well as socio-cultural and ethical awareness.

Outcomes

Upon successful completion of the courses in the Department of Humanities and Social Sciences, the student will be able to:

- Demonstrate the ability to communicate effectively in various contexts, including personal and professional.
- Use information literacy, critical reading and thinking skills for professional and lifelong learning.
- Contribute effectively to a team with strong communication and sound negotiation skills.
- Express an awareness of historical, socio-cultural, global, and ethical issues.

Mathematics And Physics

Mathematics and Physics are the foundation for any technical discipline. Being successful in technology requires understanding mathematical theory and the ability to apply the concepts to familiar situations and newly encountered problems. Physics introduces the fundamental laws and principles that govern virtually everything around us. Studying math and physics promotes critical reasoning, creative thinking, and logical analysis, which are central skills in the classroom and in life. The Mathematics and Physics Department at BFIT places an emphasis on problem solving, using practical everyday problems related to the Industrial and Engineering Technologies. A variety of strategies are used to present the material effectively to a highly diverse body of students.

Curriculum

The mathematics curriculum at BFIT is designed to provide a solid foundation in mathematics through a range of course offerings relevant to the technical degree programs. Each degree program at BFIT requires at least two semesters of college math that emphasize building a strong foundation of mathematics knowledge.

Many programs require additional math courses, where students expand on their foundational knowledge and explore additional technical applications. Many engineering technology programs require students to complete the math sequence through Calculus II, courses which can typically be used for transfer if a student in the engineering technology programs wants to continue his or her studies upon completing an Associate’s Degree at the college. Different entry points into the math sequence are available depending on the student’s skill level. Refer to the section dedicated to the degree program of interest for specific degree requirements.

The Physics curriculum at BFIT is designed to provide an additional technical foundation in the student’s major as well as practical applications for mathematics.

A physics lab with hands-on instruction is provided to reinforce topics covered in the classroom and to demonstrate that the governing laws of physics exist beyond the pages of the text. The physics requirement varies with each major; however, most students will take at least one semester of physics. Refer to the section dedicated to the degree program of interest for specific degree requirements.

Outcomes

Upon successful completion of the courses in the Department of Mathematics and Physics, the student will be able to:

- Solve math problems in a systematic and logical manner.
- Use critical reasoning skills for lifelong learning.
- Effectively apply math concepts to technical problems.
- Understand basic physical principles of the world around us.
- Apply physics to various situations inside and outside of the student’s field of study.

Academic Course Descriptions

AT090  SUCCESS IN AUTOMOTIVE          1 CREDIT
Success in Automotive is designed to assist students in the transition from the Department of Academic Development into their major classes and to provide additional life long learning skills to support success towards earning an Associates Degree. Students meet with academic coaches each week in focus groups and review sessions with their peers. Students meet to review material specific to their automotive courses and to discuss challenges inside and outside of school that hinder student success. Academic coaches also provide support to students’ academic success through one-on-one meetings. (Offered in the fall and spring)

AT134  AUTOMOTIVE BRAKES SYSTEMS      4 CREDITS
This course is to teach students braking system theory, operation and repair. The students will study all brake hydraulics such as proportioning valves, master cylinders and bleeding procedures. The students will also study power assist units, anti lock brakes, disc and drum brakes. Students will learn how to diagnose and properly repair all of these systems. (Offered in the fall, spring and summer)

AT150  AUTOMOTIVE ENGINES             4 CREDITS
Lecture and laboratory covering designs, nomenclature, and operational theory of internal combustion engines. Includes valves and operating mechanism, piston and connecting rod assembly, crankshaft and bearings, lubrication system, crankcase ventilation, lubricants, and complete engine overhaul procedure. Laboratory practice and instruction in servicing engines. (Offered in the fall and spring)

AT170  ELECTRICITY AND ELECTRONICS    4 CREDITS
Fundamentals of electricity and magnetism. Topics include current, voltage and resistance, Ohm’s Law, series and parallel circuits, electric power, electromagnetic circuits, electrical measurement, electronic devices and circuits. (Offered in the fall and spring)

AT173  AUTOMOTIVE ELECTRICAL SYSTEMS   4 CREDITS
Operation, construction, and servicing of automotive electrical equipment including lighting circuits, ignition systems, cranking motors and controls, and alternator-regulator circuits. Prerequisite: AT170 (Offered in the spring and summer)

AT234  AUTOMOTIVE CHASSIS AND SUSPENSION SYSTEMS  3 CREDITS
This course is designed to teach students various automotive chassis and steering systems operation and repair. Students will learn chassis designs, alignment angles, including front and rear suspension systems. The student will also be taught steering gears, steering linkage and advanced level systems such as four wheel steering, electronic steering. Students will examine electronic suspension control systems, stability control systems and the proper diagnosis and repair of these systems. Prerequisites AT134 and AT173. (Offered in the fall)

AT241  MANUAL TRANSMISSIONS            2 CREDITS
The theory, operation and service of manual transmissions and transaxles, including domestic and imported units. Emphasis is on the diagnosis, repair, and servicing of component parts. (Offered in the fall)

AT244  AUTOMATIC TRANSMISSIONS          2 CREDITS
Continuation of AT241. Study of principles of operation, maintenance, and diagnosis of automatic transmissions. Prerequisite: AT241 and AT173 (Offered in the spring)

AT252  AIR CONDITIONING                2 CREDITS
This course is a comprehensive study of automotive cooling, heating, ventilation and air conditioning systems. Studies include topics on bodily comfort, heat and pressure, and temperature relationships. The course culminates with a study of computer controlled, dual-zone climate control systems. (Offered in the spring and summer)

AT253  AUTOMOTIVE LABORATORY I         4 CREDITS
Practical, hands-on garage experience is acquired in the automotive laboratories, including major service work on live vehicles and the operation of test instruments and other specialty diagnostic equipment. Students will apply the theory learned in the first-year automotive classes to become more proficient in the diagnosis of engines, electrical, suspension, steering, and brake systems. This practical experience incorporates strategy-based engine performance, emission failure diagnosis, and engine rebuilding and machining. Prerequisites: AT134, AT150, and AT173 (Offered in the fall)

AT254  AUTOMOTIVE LABORATORY II        4 CREDITS
Practical, hands-on garage experience is acquired in the automotive laboratories, including major service work on live vehicles and the operation of test instruments and other specialty diagnostic equipment. Prerequisite: AT 253, AT253 and AT271 (Offered in the spring)
### ACADEMIC COURSE DESCRIPTIONS

**AT255  ALTERNATIVE FUELS**  2 CREDITS  
This course will concentrate on the theory, operation, and service of all alternative fuels and electric vehicles. The topics of study will be hybrid battery service, electric motors, generators, regenerative braking systems, hybrid transmissions and hybrid heating and air conditioning. The lab component will secure all the theory taught in lecture. Prerequisite AT 219. *(Offered in the fall)*

**AT256  AUTOMOTIVE LAB-CERTIFICATE**  3 CREDITS  
Practical, hands-on garage experience is acquired in the automotive laboratories, including major service work on live vehicles and the operation of test instruments and other specialty diagnostic equipment. Students will apply the theory learned in the first-year automotive classes to become more proficient in the diagnosis of engines, electrical, suspension, steering, and brake systems. This practical experience incorporates strategy-based engine performance, emission failure diagnosis, and engine rebuilding and machining. Prerequisites: AT174, AT150, and AT173. *(Offered in the fall and summer)*

**AT257  HYBRID SYSTEMS**  3 CREDITS  
Diagnosis and service procedures of Honda, Toyota, Lexus, Ford, Mercury, and General Motors vehicles. Fuel cell and advanced technologies. Hybrid vehicle diagnostic trouble codes. Internal combustion engine to all electric conversion will be lectured on along with vehicle conversion requirements, conformity, and certification. Student teams will locate and purchase through the college a suitable vehicle for electric conversion. This course will also focus on CNG and hybrid plug-in vehicles. Prerequisite: AT259. *(Offered in the spring)*

**AT259  AUTOMOTIVE HYBRID SAFETY AND TECHNOLOGY**  3 CREDITS  
This course looks at the present use of automotive hybrid safety in the automotive industry, along with future technology. Topics covered are safety procedures and precautions that are required when repairing battery electric vehicles, high voltage batteries, hybrid vehicles and fuel cells. The lab portion focuses on safety, service, and maintenance of hybrid vehicles, electric vehicles and bio fuels vehicles. *(Offered in the full and spring)*

**AT271  ENGINE PERFORMANCE AND DIAGNOSIS I**  4 CREDITS  
This course applies the theory learned in AT150 Engines and AT170/173 Electricity to properly diagnose mechanical and electrical problems that affect drivability and emissions. Material includes current tune-up and maintenance procedures, the development of diagnostic routines, basic ignition diagnosis, on-vehicle electrical testing, volumetric efficiency theory and testing, turbocharger/supercharger theory and diagnosis, and On-Board Computer Diagnosis. Prerequisites: AT150 and AT173. *(Offered in the fall, spring and summer)*

**AT274  ENGINE PERFORMANCE AND DIAGNOSIS II**  4 CREDITS  
This course builds on AT271, enabling students to understand the complexities of electronic engine management systems and how they affect drivability and emissions. Diagnosis topics include fuel systems theory, fuel injection systems, microprocessor theory and operation, Electronic Ignition Systems (E.I.S.), four- and five-gas analysis, emission failure, and On-Board Computer Diagnosis. Prerequisite: AT271. AT150 and AT173 *(Offered in the fall, spring and summer)*

**AT282  AUTOMOTIVE SERVICE ADVISING AND CUSTOMER RELATIONS**  3 CREDITS  
This course enables the students to understand the complexities of automotive customer service. Topics of study include the different types of automotive facilities, customer relations, and internal service facility operations. Through lectures and class discussion the student should be aware of the different types of automotive repair facilities ownerships, the chains of command, roles and requirements for each of the different employees. The student will be able to identify the major financial measurements that have an effect on the business’s profit or loss. The student will also be exposed to the start-up cost and procedures involved in the development of a new automotive repair business. Topics of study include customer interviewing and complaint assessment, flat rate and hourly methods of payment and benefit packages. Case studies are presented and guest lecturers from industry are utilized to reinforce service-advising principles. *(Offered in the spring)*

**AT373  ADVANCED ENGINE PERFORMANCE**  3 CREDITS  
An advanced level course which builds upon the basic computerized engine control diagnostic skills acquired in AT271, AT274, and the drivability clinic. Special emphasis is placed on oscilloscope pattern interpretation, serial data communications, database configurations and functional testing of major computerized engine control systems and subsystems. Prerequisite: AT274. *(Offered in the fall)*

**AT474  ENHANCED EMISSIONS AND DRIVABILITY**  3 CREDITS  
An advanced level of enhanced emissions and drivability diagnostics using dynamometer-based transient testing covering ASM 50/15, ASM 25/25 and RG-240 drive traces. This course also includes advanced On Board Diagnostics - Generation II (OBD II) and Controller Area Network (CAN) diagnostics. Students will become proficient in 5-gas exhaust analysis and scan tool data stream information and applications. *(Offered in the spring)*
AT481 AUTOMOTIVE MARKETING 3 CREDITS
This course exposes the student to today’s marketing principles as they relate to the automotive field. Through lectures, practical exercises, and class discussion the student will be made aware of the marketing process, understanding the marketplace and consumers. The student will also be able to design a customer driven marketing strategy based on automotive customers needs. Distribution and sale of automotive vehicles and related parts and accessories. Policies pertaining to wholesale and retail transactions, parts inventory and turnover, service sales, dealership personnel, and warranty. (Offered in the fall)

AT482 VEHICLE APPRAISAL 3 CREDITS
Instruction and practical application in the use of estimating manuals to produce reports for buying, selling and trading of vehicles, including damage appraisal. (Offered in the spring)

AT483 COMPUTERS IN THE AUTOMOTIVE INDUSTRY 3 CREDITS
Microcomputer applications of database, spreadsheet, and office management in the automotive industry. Specific automotive management packages which service an entire automotive enterprise including sales, parts and inventory, and service will be covered. (Offered in the fall)

AT485 SENIOR SEMINAR I 1 CREDIT
The preliminary section of a two part course of study that will explore research tools and methods utilizing virtual and physical library resources as well as Internet Meta-search tools. Skills acquired will allow students to develop individual research topics and hypothesis statements that will lead to the formal presentation of a Senior Research Project in AT495. Prerequisites: BS512, EN320. (Offered in the fall)

AT494 SERVICE MANAGEMENT 4 CREDITS
This course enables the students to understand the complexities of automotive service management. Through lectures, practical exercises, and class discussion the student will be made aware of the different types of automotive repair facilities, ownerships, the chains of command, rules and requirements for the service manager in each of the different facilities. The student will also be exposed to the recruitment, selection, induction, development, and evaluation of employees. Also the student should be able to identify and use financial reports to be able to analyze financial data that has an effect on the business’s profit or loss. Upon successful course completion, the students will have the tools needed to be able to maintain and also increase the profitability of a modern day automotive repair facility. Theory and practice of service management are explored, including OSHA laws, record keeping, productivity, efficiency, and profitability. (Offered in the spring)

AT495 SENIOR SEMINAR II 3 CREDITS
This concluding course expands on the topics previously developed and approved in AT485. Students will have the opportunity to discuss, organize and refine their chosen projects. The culmination of this course will be the presentation of a formal written Senior Research Project. Prerequisite: AT485 (Offered in the spring)

BS101 PRINCIPLES OF ACCOUNTING 3 CREDITS
Presents the theory and techniques of financial accounting. The course encompasses the basic functions of collecting, processing, and reporting accounting information for interested third parties (e.g. owners, investors, and government) and enables students to analyze, interpret, and use accounting information. (Offered in the spring and summer)

BS108 INTRODUCTION TO HUMAN RESOURCES MANAGEMENT 3 CREDITS
Examines the role of the human resources manager in the areas of selection and placement, training and development, performance appraisal, wage, salary, and benefit programs, and labor-management relations. (Offered in the fall)

BS110 INTRODUCTION TO BUSINESS 3 CREDITS
This course serves as an introduction to business in the U.S. and how it exists within a global marketplace. Business practices and concepts will be central to the learning process throughout the semester. Each unit during the semester will focus on the different operational functions within business including finance, human resources, management, and marketing. In addition, the various forms of business ownership, operation, and governance will also be explored. (Offered in the fall and spring)

BS120 INTRODUCTION TO MARKETING 3 CREDITS
This course educates students about the basic principles of marketing a business or a product and applying these principles in the workplace. Students in the course will explore multiple avenues of marketing and branding that will focus on the theories surrounding price, promotion, product, and placement in order to generate revenue and increase customer satisfaction. Students will explore consumer behavior and reactions. (Offered in the fall and spring)

BS201 SMALL BUSINESS MANAGEMENT 3 CREDITS
This course introduces students to the fundamental practices of small business management. Topics will include basic business planning principles, inventory management, sources of funding for small businesses and marketing strategies. Content will focus on the risks and opportunities in the Opticianry Field. (Offered in the fall)
BS210  ENTREPRENEURSHIP  3 CREDITS
This course serves as an introduction to business ownership, the steps involved in creating a business plan, and securing funding to launch the business. Students will assess a business idea and evaluate its position in the marketplace through SWOT analysis and the completion of a competitive analysis. This course will prepare students for their capstone project and presentation. *(Offered in the fall)*

BS220  INTRODUCTION TO QUALITY SYSTEMS  3 CREDITS
Manufacturing facilities and high tech companies within the United States are able to outcompete overseas enterprises by establishing and maintaining strict quality standards to offset higher domestic labor costs. This course provides students with the fundamentals of various measures of quality along with techniques to evaluate and apply those measures to maintain and improve products, processes, and services. Topics include process control statistics, fundamental lean principles and techniques, six sigma, continuous improvement cycles, and quality across the supply chain.

The role of quality in cost reduction, customer satisfaction, and regulatory compliance will be explored. *(Offered in the fall)*

BS250  SUMMER SEMINAR  1 CREDIT
Through weekly seminar meetings, guest speakers and directed observational notes, students will apply their business and technology knowledge to gain an understanding of a current or past workplace. The role of technology in generating a profit will be examined. *(Offered in the summer)*

BS285  TECHNOLOGY BUSINESS CAPSTONE  1 CREDIT
Working in teams, students will develop a technological idea into a business plan and then pitch that plan to a panel of representatives from potential funding sources. Students will consult with each other and with technology majors to build the knowledge-base of the plan. *(Offered in the spring)*

BS311  MICROECONOMICS  3 CREDITS
A broad introductory survey in which special attention is given to the role of economic principles in analyzing and understanding current economic problems. Emphasis is placed on the functioning of markets and on examining the behavior of individual economic units such as the business firm and the consumer. *(Offered in the fall)*

BS312  ADVANCED CONCEPTS IN INFORMATION LITERACY  3 CREDITS
This project-based course covers the process of information literacy, from determining information needs through evaluating, managing and disseminating information, by integrating academic research strategies with advanced applications of desktop software. Best practices for effective communication of information in multiple formats will be examined with emphasis on integrating software programs through merging, transferring and linking files. *(Offered in the fall)*

BS324  MANAGING ORGANIZATIONS  3 CREDITS
Examines theory, research, and practice in the management of organizations. Students learn to make use of analytical tools for recognizing, diagnosing, and setting on managerial problems related to organizations, to the objectives, and to the development of human resources. The course emphasizes topics at the macro level, such as organizational analysis and design, and at the micro level, such as managerial behavior, motivation, and interpersonal relations. *(Offered in the spring)*

BS332  FINANCIAL ACCOUNTING  3 CREDITS
Presents the theory and techniques of financial accounting. The course encompasses the basic functions of collecting, processing, and reporting accounting information for interested third parties (e.g., owners, investors, and government) and enables students to analyze, interpret, and use accounting information. *(Offered in the spring)*

BS334  BUSINESS LAW AND LEGISLATION  3 CREDITS
This course reviews the American legal system, organizational structures, and the regulatory environment pertinent to business. Critical examination is conducted regarding: business ethics; contracts; business associations (agency, partnerships, corporations), and other legal entities. *(Offered in the spring)*

BS431  MANAGEMENT ACCOUNTING  3 CREDITS
Presents the theory and technique of managerial accounting from the particular perspective of the manager. The course covers the identification and analysis of the behavior of costs within the organization, and illustrates how managers use such knowledge for planning and control. Major topics include responsibility accounting, comprehensive and cash budgeting, and standard job order and process cost systems. Prerequisite: BS332 *(Offered in the fall)*

BS432  HUMAN RESOURCES MANAGEMENT  3 CREDITS
Examines the role of the human resources manager in the areas of selection and placement; training and development; performance appraisal; wage, salary, and benefit programs; and labor-management relations. *(Offered in the fall)*
BT100 BUILDING CONSTRUCTION GRAPHICS  4 CREDITS
The fundamental principles of building construction graphics are presented in weekly lectures and are developed in the studio through a wide variety of assignments and a semester-long project both focusing on developing basic drafting and drawing skills. Emphasis is placed on reading, interpreting, and understanding construction drawings for various buildings.
Students will learn foundation concepts including: measurement and scale, the creation of architectural drawings – plans, sections, elevations, using orthographic projection, geometric constructions, isometrics, and creation of existing condition drawings through measurement and drafting. Other topics include an introduction to various national standards and regulations, use of graphic symbols and abbreviations, schedules, dimensioning, typical sheet sizes, proper sheet (page) layout, sheet arrangement, sheet sequence (set), and drawing relationships on a sheet.
Students will be taught critical and practical skills related across disciplines of building design and construction and how these skills apply to and are used in a work environment. Topics include the proper use of hand drafting tools and materials, developing distinctive line weights and using line types, lead selection / hardness, freehand sketching with various pens and pencils, the use of trace as a design and drafting tool, lettering, how to erase and modify drawings, how to keep drawings clean while working on and transporting, storage and general organization of tools and materials.
Additional topics include the use and care of office machines, printers, copiers, scanners and how to create a digital portfolio using www.iseeu.com. (Offered in the fall and spring)

BT110 INTRODUCTION TO CAD  3 CREDITS
Through lectures and hands-on laboratory sessions students will be introduced to the use of computers for the production of drawings. Students will learn to create architectural drawings similar to those produced in an architectural office, using industry standards such as AutoCAD and National CAD Standard v5. CAD skills will include basic drawing, modifying and editing commands, and proper techniques for final presentation drawings. Students will learn these skills through the development of a semester project from plans to a 3D model. At course end, students take a simulated AutoCAD assessment exam in order to demonstrate their proficiency in AutoCAD. (Offered in the fall and spring)

BT115 AUTOCAD FOR ELECTRICAL APPLICATIONS  3 CREDITS
Through lectures and hands-on laboratory sessions students will be introduced to Computer-Aided Drafting (CAD), including overview of computer hardware, Windows operating systems, and the AutoCAD software application program. Competence in utilizing the AutoCAD program to construct drawings is realized through progressive use of AutoCAD commands and procedures obtained by the student’s construction of various projects and exercises relating to architectural and electrical fields. Develop an understanding of Building Information Modeling (BIM) and its use as a tool in coordinating the design and construction of buildings and building systems with a primary focus on electrical systems. (Offered in the spring)

BT140 INTRODUCTION TO WORLD ARCHITECTURE  3 CREDITS
Through lectures, written assignments and analysis, students will develop an understanding of the driving social, environmental, material, and technological forces in world architecture from prehistory to post-modernism. They will improve their skills of visual analysis and visual literacy, understand basic architectural typologies from varied cultures, and develop their ability to write and think critically.
The course will focus on the Western tradition of architecture, which includes Egypt, Mesopotamia, Greece, Rome, Europe, Islamic North Africa, and Spain; but will also include cultures of China, Japan, and North and South America. The course is intended to bring the students to a historical awareness such that the student sees how the influence of historic precedent is all around them in their own built environment. (Offered in the fall and summer)

BT145 INTRODUCTION TO ADOBE DESIGN STANDARD  3 CREDITS
The course will introduce students to a suite of Adobe software that is used in creating presentations in the architecture, engineering and construction fields (AEC). Students will be introduced to the basics of Photoshop, Illustrator, InDesign, Acrobat and Bridge CS. Lectures will instruct students on the use of the programs and how they are used together to create presentations for digital publication. Lab assignments will focus on the use of each program and then how they are used in an integrative manner to enhance the work done in the programs to create various presentation materials. Students will use the skills learned and apply them throughout the remaining semesters. (Offered in the fall and spring)
### ACADEMIC COURSE DESCRIPTIONS

#### BT150  BUILDING DESIGN I  4 CREDITS
Students will be introduced to the fundamental theories and principles of building design and construction. Both two and three-dimensional design problems and puzzles will be assigned throughout the semester. Students will develop critical thinking, and an ability to talk about and evaluate design both objectively and subjectively, understanding the difference between a puzzle and a problem.

Students will learn tactics for solving problems and presenting solutions as a design professional would: by analyzing, diagramming, programming, creating a storyboard and developing a final presentation. Drawing (both by hand and CAD) and model making skills will be improved and refined. Students will study examples from history. Design principles such as symmetry, hierarchy, repetition, proportion and scale will be reinforced by design problems.

Further discussion and problem solving will integrate functional and objective areas such as: environmental building factors of sun, wind, light and sound. Students will understand the use of and apply construction regulations, specifications and standards such as CSI MasterFormat, Project Delivery, ADA accessibility, building codes, zoning regulations, and LEED. Prerequisite: A GPA of 2.0 in BT100 or a waiver from the department chair. (Offered in the spring and summer)

#### BT160  BUILDING MATERIALS AND APPLICATIONS  4 CREDITS
Building Materials and Applications is a comprehensive study of building construction technology, which includes various building systems, the construction process and the materials used in those systems and processes. The study of the methods and techniques of material extraction, manufacturing assembly and installation are covered in depth. Students will learn about specific material’s properties, characteristics, and their combinations to form composite elements. Construction regulations and standards including building codes, zoning regulations, and ADA accessibility are studied. The construction process is examined including the roles of professionals such as regulatory agencies, the design team, the construction team, financing agencies, the owner, and the user. Professional industry entities dealing with building specifications such as the CSI (construction specifications institute), their composition and organizational components such as Masterformat and Project Delivery are covered as well as green rating systems such as LEED (leadership in energy and environmental design) for new construction. The course also provides an overview of building structural design.

Students will develop several semester projects that tie directly to lectures and offer practical application of textbook material. Each project will focus on basic building materials such as wood, concrete, masonry, and steel construction. Students will design and draft simple construction documents with attention on construction details for different assemblies. (Offered in the spring)

#### BT200  CONSTRUCTION DOCUMENT TECHNOLOGIES  4 CREDITS
This course develops the graphic skills and technical knowledge that are needed to communicate essential, detailed information to clients, builders/contractors, and consulting engineers. Emphasis is placed on the preparation of a set of construction drawings for a single-family residence, using AutoCAD and Revit software. The methods and techniques of light wood frame construction in residential and commercial buildings are explored in depth. Sample specifications are studied and prepared by each student. Energy efficiency as required by codes and sustainable and green building practices will be emphasized in the development of the construction documents.

Students will understand the purpose of contract drawings as a means of communicating design ideas to a builder/contractor and to expand and strengthen the student’s skills in the fundamental methods and techniques of light wood frame construction. Also covered is the CSI Project Delivery Practice Guide as the basis of practice in building design, construction and facility operation and maintenance. Students will take a simulated assessment exam for Certified Document Technologist to demonstrate their understanding of the industry standard manual of practice. Prerequisites: A GPA of 2.0 in BT260 or a waiver from the department chair. (Offered in the spring)

#### BT210  BIM I  4 CREDITS
Introduction of the use of 3D modeling and building information modeling software (BIM) for the preparation of drawings is presented through lectures and hands-on laboratory sessions. In the introduction of the course, students will use Google SketchUp Pro 3D modeling software. Basic modeling, modifying and editing commands are utilized to complete and save various 3D modeling projects to develop a basic understanding of SketchUp as a tool in creating drawings renderings.

The remainder of the course, students will be introduced to the basic principles of BIM (Building Information Modeling) through the use of Revit Architecture, Autodesk’s BIM software platform. Students will become familiar with the fundamental tools of Revit Architecture and parametric modeling including: user interface, parameters, families, components, massing, rendering, and printing. Basic modeling, modifying and editing commands are utilized to complete and save various modeling projects to develop a basic understanding of Revit as a tool in creating drawings.

Students will integrate their projects from other technology courses to produce computer models of those projects in both SketchUp and Revit. Prerequisite: A GPA of 2.0 in BT150 or a waiver from the department chair. (Offered in the fall)
BT220  SUSTAINABLE BUILDINGS: DESIGN & CONSTRUCTION  3 CREDITS  
Overview of the concept of sustainability (holistic living and building design that integrates solar concepts, energy efficiency, and material ecology) and its economic, political, and environmental consequences. Lecture and hands-on application focus on sustainable building practices including design, specification, construction, lifecycle issues, LEED certification and other organizations. Exploration of the historical basis for the ideology of sustainability, its applications in today’s society.  
(Offered in the fall)  

BT230  ENVIRONMENTAL SYSTEMS  4 CREDITS  
The study of heating, ventilation, air conditioning, plumbing and electrical systems for facilities both residential and commercial is taught. Students will learn to understand the basic design and construction terminologies used to be able to read and create HVAC, plumbing and electrical construction documents. Also included is the presentation of the basic principles found in vertical circulation, security, fire protection, noise control and room acoustics, energy sources, and green building design considerations. Field trips to area construction and building sites augment class studies.  
(Offered in the spring)  

BT260  BUILDING DESIGN II  4 CREDITS  
Using graphic diagrams as a means of testing ideas, students will explore various spatial organizations and circulation patterns to develop a concept diagram. The concept is then further developed into schematic design drawings: floor plans, elevations and isometric drawings, through sketching and hand drafting. Students will then create design development documents using AutoCAD software. The selection of materials and technologies appropriate to the student’s project is developed individually in the studio. Students will be assigned a program for a single-family residence following it through the successive stages of design. Initially, students will analyze the environmental factors influencing the design such as: cultural/historical, legal/economic and climatic. Each student will then develop their design based on the analysis and on user/owner requirements. Prerequisite: A GPA of 2.0 in BT150 or a waiver from the department chair.  
(Offered in the fall)  

BT270  BIM II  4 CREDITS  
This course extends the content from BT210 BIM course, covering BIM in more detail through the use of Revit Architecture. Students will expand their knowledge of the tools of Revit Architecture and parametric modeling. Concepts to be studied include: user generated custom families, flexing parameters, rendering with custom materials, work sharing, detailing and documentation. Students will also use Revit Architecture in conjunction with their work in BT260 and use the software to produce a set of construction drawings. Students will also be exposed the use of Revit Structure, Revit MEP and Ecotect Analysis software. At course end, students take a simulated Revit assessment exam in order to demonstrate their proficiency in Revit Architecture. Prerequisite: A GPA of 2.0 in BT210 and BT210 or a waiver from the department chair.  
(Offered in the spring)  

BT280  STATICS AND STRENGTH OF MATERIALS  4 CREDITS  
Introduction to the basic fundamentals of statics and strength of materials relating to structural components of a building or structure. The principles of static equilibrium and free-body diagrams are applied to basic building structural elements and simple structural systems commonly found in buildings. The principles of stress, strain, and material properties are studied as they relate to materials commonly used in the building industry. Bending, shear, and deflections and associated stresses are investigated and used as design requirements. Prerequisite: MA220 and PH212 (Offered in the spring)  

CM100  BUILDING CONSTRUCTION GRAPHICS  3 CREDITS  
Fundamental principles of Building Construction Graphics are presented in weekly lectures and are developed in the lab through a wide variety of assignments and a semester long project. Emphasis is placed on the core competencies of graphic communication for the built environment, how design professionals communicate ideas, from inception through construction. Students will learn foundation concepts including: measurement and scale and the reading of and interpretation of architectural drawings - plans, sections, elevations, and drawing relationships on a sheet. Students will begin to understand and apply construction regulations, specifications and standards such as CSI Masterformat, Project delivery, ADA accessibility, building codes, zoning regulations, and LEED.  

2014 / 2015 COURSE CATALOG 93
CM110 CONSTRUCTION MANAGEMENT I 3 CREDITS
This course offers a sampler of the entire CM program. It provides the first introduction to the principles of management, construction industry, roles and responsibilities, and an overview of common project management tools. Upon successful course completion, students will be able to understand terminology common to the construction industry, general principles of management and the roles and responsibilities of parties. Students will be familiar with selected planning and control tools and common safety concerns and protocol.

CM130 CONSTRUCTION ESTIMATING 3 CREDITS
This course introduces students to the skills and tools necessary to prepare cost estimates for construction projects. The course focuses on the blueprint reading and determination of quantities (materials takeoff). Classes will include lectures, problems, examples and a term project. This course aims to increase and improve the working knowledge of students in construction estimating and to train them as professional construction managers. Upon successful course completion, students will be able to read blueprints, perform quantity takeoff for various work items, utilize computer software to prepare required deliverables, perform quantity takeoffs and pricing for a small construction project. Emphasis shall be placed on the scope of work, coordination and quantity surveys for the building components for residential and commercial projects.

CM145 HEAVY CONSTRUCTION 3 CREDITS
This course introduces students to construction equipment and selected construction methods. This includes economy, selection, and productivity of common construction equipment and construction procedures for industrial and heavy civil construction. Upon successful course completion, students will be able to understand terminology and units of measurements related to equipment usage in industrial and heavy civil projects. Understand standard designations, sizes, and gradations of equipment and perform comparative cost analysis for owning and operating heavy equipment. Perform the proper selection, applications, utilization and productivity of heavy equipment and understand general processes/methods for constructing industrial and heavy civil projects. Show awareness of construction Safety (OSHA regulations for excavation, inspection and protection).

CM210 CONSTRUCTION MANAGEMENT II 3 CREDITS
A management course in contract documents, safety, planning, scheduling, production control, and law and labor. Topics include contracts, planning, cost and production control, peripheral documents, and cost and work analysis. Upon successful course completion, students will be able to explain construction contract documents, planning and scheduling, cost and production controls. Describe laws and labor issues related to construction projects. Demonstrate the ability to plan and schedule a construction project. Implement job site safety practices and procedures. Identify use of tools and equipment along with method of use in construction and perform common procedures at the job site. Describe and recognize requirements in construction documents. Describe terms and methods in techniques for planning, scheduling and supervision and identify laws and labor issues in construction. Demonstrate problem solving techniques and dexterity in planning and scheduling projects.

CM250 CONSTRUCTION SURVEYING 4 CREDITS
The purpose of this course is to provide the student with the fundamental understanding of land surveying, including both the theory of surveying as well as the hands-on use of modern surveying instruments. Specifically, the theory portion of the course includes surveying computations of grade, direction, traverse adjustment, area, volume, and horizontal & vertical curve geometry. The instrumentation portion of the course includes making field measurements of elevation, distance and angle using the appropriate land surveying equipment including: the tape, engineer’s level, transit, theodolite, EDM, and total station. An introduction to construction layout is also included.
Upon successful course completion, students will understand the use of measuring systems and the proper mathematical calculations to produce accurate and correct true distances and the use of a level and the mathematical calculations to determine elevation differences. Understand the use of a transit to determine vertical and horizontal angles to locate reference points as applied to construction staking and surveying. Students will have an improved understanding of the rule on Construction Surveying and layout in the operation of the construction industry.

CM260 PROJECT SCHEDULING 3 CREDITS
This course introduces students to the theory and application of the fundamentals of construction planning and scheduling to include creating, presenting, revising, and updating construction schedules. This course will help enhance students’ ability to understand and apply management principles and practices including: process planning, directing, costing, resource allocation, and controlling all aspects of the construction operations and resources from pre-construction through project close out. Upon successful course completion, students will be able to understand and apply network scheduling methods to construction projects and prepare WBS (work breakdown structures). Perform cost and budget analysis and calculate schedule and cost variance for projects. Use commercial scheduling software and perform resource allocation & leveling. Update schedules and monitor work progress using the schedule and other tools/programs in managing a construction project.
CT19  BUSINESS APPLICATIONS  3 CREDITS
In this course students will learn to use MS Excel and MS Access as effective tools for organizing, analyzing, and presenting data in the workplace. Using MS Excel students will learn to enter data, move, copy and edit cells; construct tables and charts; and create and apply basic mathematical functions to spreadsheet data. Using MS Access students will learn the basics of database design, how to create and modify database tables, forms, queries and reports; and complete a project designed to test the student’s grasp of proper relational database design and implementation of a design plan. (Offered in fall and spring)

CT121  WEB DESIGN I: HTML AND DREAMWEaver  3 CREDITS
Students learn how to design and develop websites using HTML and Dreamweaver. Students will create Web pages utilizing forms, frames, cascading work sheets, links and images. Students will reinforce the skills learned in this course through the design, development and publishing of their own website. (Offered in the spring and summer)

CT122  WEB DESIGN II: ADOBE FLASH  3 CREDITS
This course introduces the student to the tools and features available in Adobe Flash to create more dynamic and interactive web pages. Topics covered include drawing objects, symbols, interactivity, animation and the creation of special effects. Students will plan and create their own website using Adobe Flash features. Prerequisite: CT121 (Offered in the fall)

CT134  INTRO TO WINDOWS OPERATING SYSTEM  3 CREDITS
This course presents an in-depth introduction to the core features of Microsoft Windows operating systems, as covered by the Microsoft Technology Associate Exam 98-349. Topics include operating system configurations, installing and upgrading client systems, managing applications, managing files and folders, managing devices, and operating system maintenance. At the conclusion of the course students will be encouraged to attempt MTA Exam 98-349 using discounted exam vouchers available through the college. (Offered in the fall and spring)

CT142  INTRODUCTION TO PROGRAMMING LOGIC AND C++  4 CREDITS
This course is an introduction to problem solving and program design using the procedural aspects of the C++ programming language. Students are introduced to programming logic and design using visual and icon-based programming languages. The fundamentals of the C++ programming language are introduced with the student expected to apply the programming and logic design methodology in solving programming problems. The MS Visual C++ Integrated Development Environment (IDE) is used as the primary development tool. (Offered in the fall, spring, and summer)

CT144  C++ PROGRAMMING  4 CREDITS
This course is a continuation of CT143. It picks up with user developed functions including inline functions, default arguments, function overloading and function templates. Array processing covered in CT143 is then enhanced with the introduction of parallel arrays, passing arrays to functions and sorting and searching of arrays. This is followed by the C++ string class, structures, pointers and dynamic memory allocation. The course finishes up with a shift in focus to the object-oriented paradigm with an introduction to Classes. The MS Visual C++ Integrated Development Environment (IDE) is used as the primary development tool. Prerequisite: CT143. (Offered in the spring and summer)

CT146  INTRODUCTION TO GAME PROGRAMMING WITH JAVA  4 CREDITS
This course is an introduction to game programming using Java and the icon-based programming language Greenfoot as the primary development tools. The content of the course includes practical exposure to game/simulation conceptualization, design, storyboarding, essential programming techniques, and implementation. Through participation in game programming projects of increasing complexity, students are expected to develop growing competence with object-oriented programming using Java. (Offered in the fall and spring)

CT211  WEB SITE MANAGEMENT  3 CREDITS
Students explore the services necessary for the administration and management of a website. Topics covered include the planning, configuration and the installation of a website. Students will examine what is needed to implement and support a web server, research industry web server products, understand how to create domains and perform domain name search, explore performance monitoring and optimization techniques, and explore technical support and security issues. The course concludes with a look at website advertising and marketing considerations. Prerequisite: CT122 (Offered in the spring)

CT212  PC MAINTENANCE AND REPAIR  3 CREDITS
This course covers the fundamental topics of PC technician training as covered by the CompTIA A+ 220–801 certification exam, including hardware, networking, laptops, printers and operational procedures. The focus of the course is split between hands-on maintenance and repair of PCs, and certification exam preparation. At the conclusion of the course students will be encouraged to attempt the 220–801 certification exam using discounted exam vouchers available through the college. (Offered in the fall)
CT213  PC MAINTENANCE AND REPAIR II  3 CREDITS
This course reviews study of the fundamental topics of PC technician training begun in CT212. This time the topics are those covered by the CompTIA A+ 220-802 certification exam, including operating systems, security, mobile devices and troubleshooting. The focus is again split between hands-on maintenance and repair of PCs and certification exam preparation. At the conclusion of the course students will be encouraged to attempt the 220-802 certification exam using discounted exam vouchers available through the college. Prerequisite: CT212 (Offered in the spring)

CT221  ENTERPRISE DATABASE MANAGEMENT  3 CREDITS
This course provides students with an understanding of the issues in managing enterprise database systems as an essential organizational resource. Topics include the enterprise data architecture components, data storage configurations, and information retrieval methods. The course expands from the relational model to the multidimensional model, object-relational techniques, and Web-accessed data. Oracle databases serve as the primary tools for use in the course. Prerequisite: CT119 (Offered in the spring and summer)

CT231  LINUX SYSTEM ADMINISTRATION  3 CREDITS
This course introduces the Linux file system, group administration, and system hardware controls. Topics include intermediate command-line (CLI) administration, access control, file systems, software installation and management, process control, and security. Students will write shell scripts and constructs to enhance and automate system administration activities and, upon course completion, will be able to perform basic system administration tasks including installation, configuring and attaching a new Linux workstation to an existing network. Prerequisite: CT134 (Offered in the fall)

CT233  WINDOWS SYSTEM ADMINISTRATION  3 CREDITS
This course presents an in-depth introduction to the core features of Microsoft servers, as covered by the Microsoft Technology Associate Exam 98-365. Topics include server installation, server roles, active directory, storage, server performance management, and server maintenance. At the conclusion of the course students will be encouraged to attempt the MTA-365 certification exam using discounted exam vouchers available through the college. Prerequisite: CT134 (Offered in the spring and summer)

CT245  INTRODUCTION TO MOBILE DEVELOPMENT WITH ANDROID  4 CREDITS
This course is an introduction to mobile applications programming using Google’s development platform Android. Students will learn how to modify and write applications that can run on any device supporting the Android environment. In addition to the Android software development kit (SDK), students will become familiar with the icon-based programming language App Inventor and the Eclipse development environment as important tools for building Android applications. As a final project students will be required to design and develop original Android applications of their own creation. (Offered in the spring)

CT247  INTERMEDIATE JAVA PROGRAMMING  4 CREDITS
This course provides a comprehensive introduction to the Java programming language, including data types, decision structures, looping, files, classes and objects, exception handling, packages, streams, and graphics. Students create methods and objects from the standard library classes and follow this by writing their own classes and developing simple GUI applications. Prerequisite: CT145 or CT146 (Offered in the spring)

CT249  SURVEY OF CONTEMPORARY PROGRAMMING LANGUAGES  4 CREDITS
This course looks at two contemporary programming languages, Python and C#. After learning the new syntax, students apply programming techniques developed in previous courses to write programs and examine the situations for which each language is best suited. Prerequisite: CT145 or CT146 (Offered in the spring)

CT265  NETWORKING I  4 CREDITS
Students are introduced to computer networking concepts using the TCP/IP and OSI networking models. Topics covered include the TCP/IP application, transport, Internet and network access layers, and the OSI layers and their functions. The fundamentals of LANs, including Ethernet data link protocols and basic cabling, are covered. This course uses a practical, technical introduction to computer networking and provides a thorough foundation through concept mastery and hands-on activities. Prerequisite: CT134 (Offered in the fall)

CT267  NETWORKING II  4 CREDITS
This course continues and builds upon the theory and hands-on laboratory work of CT265. It focuses on the design and implementation of state-of-the-art network architectures and solutions for enterprise networks. It provides an in-depth hands-on coverage of protocols and network technologies that are essential for building corporate infrastructures and seamlessly integrating them with the Internet. Special attention is paid to essential characteristics of high-quality e-business environments, such as scalability, reliability, and security. Hands-on laboratory work will be done on industry leading Cisco routers and switches. Students will develop and build small enterprise class networks. Prerequisite: CT265 (Offered in the spring)

CT275  TOPICS IN IT EMPLOYMENT READINESS  4 CREDITS
This course aims to prepare students for workplace readiness through targeted learning of skills belonging to roles within a professional IT team. Selection of projects, roles and skillsets will vary from semester to semester. The course begins with an introduction to the project area and roles that serve as the focus for a given semester. Students are then provided instruction in the essential skillset of each role and a range of opportunities to practice what they have learned. The course culminates with students assuming the various roles they have studied as part of a functioning team whose focus is to complete a real-world project drawn from the IT area under study. Successful students will receive recommendations for actual or prospective employment in the field. Prerequisite: CT119 and CT145 or CT146 (Offered in the spring)
CT365  NETWORK SECURITY  4 CREDITS
This course provides the skills necessary to apply and implement technical knowledge of security concepts in the security environments confronting enterprises today. Topics include systems security, access control, network infrastructure, assessments and audits, cryptography and organizational security. Students are given real world scenarios to reinforce the material covered and will learn how to apply the concepts to particular settings such as healthcare. This course helps prepare students for the CompTIA Security+ SY0-301 certification exam. Corequisite: CT267 (Offered in the spring)

EE101  INTRODUCTION TO ELECTRO-MECHANICAL SYSTEMS  3 CREDITS
Fundamental principles will be applied to analyze simple electro-mechanical systems. Excel will be used to explore variations in parameters. Word will be used to document results and PowerPoint used in developing presentations. The course may include electrical components, sensors, or motors. Corequisite: EE110. (Offered in the fall and spring)

EE110  DC CIRCUITS  4 CREDITS
Introduction to basic DC circuit theory. Topics include a study of SI units. Ohm’s Law and Kirchhoff’s Law; series, parallel, and series-parallel circuits, power and energy relations. Also Thevenin’s, Norton’s and Maximum Power Theorems. Topics reviewed and reinforced in the accompanying laboratory. Prerequisites: Pass placement testing or complete MA105 with a GPA of at least 2.00. Corequisites: EE101, MA220 (Offered in the fall and spring)

EE113  AC CIRCUITS  4 CREDITS
Continuation of topics in EE110 with emphasis on basic AC circuit concepts, such as: capacitors, inductors, generation of single-phase alternating potential; average and RMS values of sinusoidal waveforms; phasors; power in AC circuits; application of general AC circuit analysis. Topics reviewed and reinforced in accompanying laboratory. Prerequisites: EE101, EE110, MA120. Corequisite: MA220 (Offered in the fall and spring)

EE122  ELECTRONICS I  4 CREDITS
Basic electronics including energy levels and bands, semiconductor construction, electron-hole conduction characteristics and areas of application of various bipolar semiconductor devices. Application of diodes and rectifier circuits and filters. Transistor operation analysis for common emitter configurations. Topics include DC biasing arrangements, stabilization methods for DC operating point and AC gain, input impedance and output impedance. Prerequisites: EE101, EE110, MA120, Corequisite: EE113, MA220 (Offered in the spring and summer)

EE131  DIGITAL PRINCIPLES  4 CREDITS
An introductory course in digital concepts, which includes number systems, codes, Boolean algebra, Karnaugh maps, gating circuits, characteristics and properties of integrated circuit logic families, logic circuit analysis and logic circuit design. Types of flip-flops, counters, registers and their applications are explained. A weekly laboratory enables the student to apply the principles taught in the theory portion of the course. Prerequisites: Pass placement testing or complete MA105 with a GPA of at least 2.00. Corequisites: EE101, MA220 (Offered in the fall and spring)

EE214  ELECTRICITY AND ELECTRONICS  4 CREDITS
The study of electrical and electronic devices used in electrical measurements with basic DC and AC circuit theory. Topics include Ohm’s Law, Kirchhoff’s Laws; Applications of Thevenin’s Theorem, reactive elements. Topics reviewed and reinforced in accompanying laboratory. (Offered in the spring)

EE223  ELECTRONICS II  4 CREDITS
This course will analyze bipolar differential amplifiers, operational amplifiers, feedback, class A, B, and C power amplifiers, and single stage FET amplifiers. The advantages and disadvantages of each will be discussed, including costs. Prerequisites: EE122, MA130 (Offered in the fall)

EE235  PROGRAMMABLE LOGIC  4 CREDITS
Students will study both the technical and business benefits of programmable integrated circuits. They will learn to simulate both combinational circuits and sequential logic circuits, and Finite State Machines. In the laboratory, CAE tools will enable the student to design, program and test circuits. Prerequisites: CT143, EE101, EE122, EE131, MA120. Corequisite: EE223 (Offered in the fall)

EE240  EMBEDDED PROCESSORS  4 CREDITS
This course focuses on micro-controller/microprocessor technology, basic hardware components of a micro-controller, programming concepts, timers, interrupts, A/D converter operations with interfacing concepts to perform I/O operations. Students will be exposed to assembling components, downloading and running assembly language programs to control these components, and hardware interfacing. There is an emphasis on using the manufacturer’s documentation to confirm that the controller’s instructions correspond to the proper operation of the controller’s hardware and peripheral components. Prerequisites: CT143, EE101, EE131. (Offered in the spring)

EE250  ELECTRONIC COMMUNICATIONS  4 CREDITS
This course will cover the concept of electronic communications and networking. It will provide students with a practical focus that can better prepare them for real life practices and experiences. The contents are: fundamental concepts, Fourier Series, amplitude modulation and demodulation, analog to digital conversion, digital to analog conversion, Ethernet, and TCP/IP protocol. Prerequisites: EE113, EE223, MA220 (Offered in the spring)

2014 / 2015 COURSE CATALOG 37
EE254 NETWORKING FOR END USERS 4 CREDITS
This course is intended for those who need to install, configure, troubleshoot, repair computers or instrumentation to connect to the local area network in the workplace. Connections to wired 802.3 and wireless 802.11 networks will be discussed. (Offered in the spring)

EL110 CIRCUIT THEORY I 4 CREDITS
Introduction to basic DC Circuit Theory. Topics include introduction to SI units and a study of Ohm’s Law and Kirchhoff’s Voltage and Current Laws; series, parallel, and series-parallel circuit analysis, and power and energy relations and analysis. Theory and application of inductors and capacitors. National Electrical Code application of DC Theory. Topics reviewed and reinforced in the accompanying laboratory exercises. Prerequisites: Pass placement testing or complete MA105 with a GPA of at least 2.00. (Offered in the fall and spring)

EL127 ELECTRICAL DESIGN AND LAYOUT I/ NEC I 5 CREDITS
An introduction to the National and Massachusetts Electrical Codes and study of the fundamentals of electrical design, based on the requirements of these codes. Topics focus on residential applications and include polarity identification of systems and circuits; safety rules for working on electrical systems; electrical symbols; factors affecting conductor size and type of installation; application of switches; and an emphasis on circuit wiring diagrams. Application of general wiring methods, boxes, fittings and cabinets. Laboratory included. Prerequisites: Pass placement testing or complete MA105 with a GPA of at least 2.00. (Offered in the fall and spring)

EL129 ELECTRICAL DESIGN AND LAYOUT II/ NEC II 5 CREDITS
A continuation of topics covered in EL127. Continued study of the National and Massachusetts Electrical Codes and fundamentals of electrical design. Topics include requirements for calculating branch circuit sizing and loading; principles of overcurrent protection, grounding and bonding; residential special purpose outlets, and Service Entrance equipment and calculations. Laboratory included. Prerequisite EL127. (Offered in the spring and summer)

EL213 CIRCUIT THEORY II 4 CREDITS
Continuation of topics covered in EL110. Emphasis will be on basic AC circuit concepts as applied to the generation of single-phase alternating current voltages. Analysis of Peak and RMS voltages. Study of the differences between sinusoidal and non-sinusoidal waveforms. Analysis of power in AC circuits and the effects of inductive and capacitive elements on electrical systems. Study and analysis of the relationships between voltage, current, and impedance in AC circuits. National Electrical Code application of AC Theory. Topics reviewed and reinforced in the accompanying laboratory exercises. Prerequisite MA120 and EL110 (Offered in the spring and summer)

EL 214 LOW VOLTAGE SYSTEMS AND CONTROLS 4 CREDITS
Topics include fire warnings and security systems, fiber, data and communications wiring and systems. Study will focus on the application of the current National and Massachusetts Electrical Codes as they pertain to these systems. (Offered in the fall)

EL222 ELECTRICAL DESIGN AND LAYOUT III/ NEC III 4 CREDITS
Continued study of the National and Massachusetts Electrical Codes and fundamentals of electrical design as they pertain to commercial applications. An introduction to a variety of wiring methods, including EMT, IMC, IMC, PVC, and types AC and MC cable. Topics include interpreting blueprints and specifications; calculating types of luminaires and their application; electrical loads; motor and appliance circuits; and feeder sizing. Laboratory included. Prerequisite EL129 (Offered in the fall)

EL229 ELECTRICAL DESIGN AND LAYOUT IV/ NEC IV 4 CREDITS
Continued study of the National and Massachusetts Electrical Codes with emphasis on advanced topics, including hazardous locations and requirements for special occupancies. Other topics include commercial branch circuits, feeders and electrical services; feeder diagram calculations; motor and motor control installations; motor load calculations; and principles of grounding systems and equipment. Laboratory included. Prerequisite EL222 (Offered in the spring)

EL240 ELECTRICAL MACHINERY I 4 CREDITS
Study of the operating characteristics of single-phase and three-phase transformers, voltage and current transform ratio, transformer modeling. Effects of loads, voltage regulation, losses and efficiency. Study of the operating characteristics of DC motors, counter emf, torque and starters. Study of single-phase and three-phase AC generators and motors. Laboratory included. Prerequisite EL215 (Offered in the fall)

EL241 ELECTRICAL MACHINERY II 4 CREDITS
Continuation and advanced coverage of topics presented in EL240. Emphasis will be on the principles and characteristics involved in the modern day commercial and industrial usage of various electrical motors, generators, control circuits, transformers, pilot devices, schematic and ladder diagrams, and the introduction to the operation, connections, and programming of PLC’s for the control of electrical machinery. Laboratory exercises with operating actual electro-mechanical machinery will allow students hands-on experience with the topics presented in classroom study. Students will be presented with the areas of the National Electrical Code that are pertinent to the material covered. Prerequisite EL240 (Offered in the spring)

<tr>
<td>EL243</td>
<td>PHOTOVOLTAIC DESIGN AND INSTALLATION</td>
<td>4</td>
<td>This 4-credit course will introduce students to the basic principles of photovoltaics. Topics will focus on site selection, panel types, storage centers, system design, and system application. Upon course completion, students will be able to install basic system components in accordance with the National Electrical Code and OSHA. Topics focus on photovoltaics and wind energy technology. The course prepares students for the North American Board of Certified Energy Practitioners (NABCEP) PV Entry Level exam. Prerequisite EL213, EL222, and EL240. TS201 (Offered in the spring)</td>
</tr>
<tr>
<td>EN080</td>
<td>ACADEMIC LANGUAGE SKILLS</td>
<td>4</td>
<td>This Academic Development course is designed for English speakers of other languages who have a foundation in English structures and vocabulary that enables them to participate in social settings. The purpose of the course is to further develop language skills in order to facilitate the students' participation in an academic environment by using an integrated skills approach that focuses on: effective strategies for critical reading, rhetorical patterns, grammatical structures that often prove troublesome to students learning English as another language, academic listening and comprehension and note-taking. In addition, the course will provide opportunities for students to develop effective discussion skills for the college classroom. (Offered in the fall, spring, and summer)</td>
</tr>
<tr>
<td>EN090</td>
<td>ACADEMIC LANGUAGE SKILLS</td>
<td>6</td>
<td>This Academic Development course is designed for English speakers of other languages who have a foundation in English structures and vocabulary that enables them to participate in social settings. The purpose of the course is to further develop language skills in order to facilitate the students' participation in an academic environment by using an integrated skills approach that focuses on: effective strategies for critical reading, rhetorical patterns, grammatical structures that often prove troublesome to students learning English as another language, academic listening and comprehension and note-taking. In addition, the course will provide opportunities for students to develop effective discussion skills for the college classroom. (Offered in the fall, spring, and summer)</td>
</tr>
<tr>
<td>EN110</td>
<td>ORAL COMMUNICATIONS</td>
<td>3</td>
<td>This course is intended to provide students with a basic understanding of the communication process and to enable them to develop their communication competence in various contexts. We will study the styles of speech used in these contexts, and will explore issues of audience, purpose, and tone. The course aims to develop an awareness of the many ways in which we communicate with one another, and to promote confidence and overall speaking skills. The course will provide numerous and varied opportunities for students to practice communication techniques. At the conclusion of the course, all students should be knowledgeable of the elements of effective communication and capable of recognizing and participating in varied contexts. (Offered in the fall and spring)</td>
</tr>
<tr>
<td>EN112</td>
<td>INTRODUCTION TO PROFESSIONAL COMMUNICATION</td>
<td>3</td>
<td>This course is intended as an introduction to provide students with a basic understanding of the communication process and to consider their competence as workplace communicators. The course focuses on gathering, organizing, and presenting written, oral, and visual information. Team-building skills are developed through collaborative learning environments. Technical communication skills are emphasized. (Offered in the fall and spring)</td>
</tr>
<tr>
<td>EN130</td>
<td>COLLEGE COMPOSITION I</td>
<td>3</td>
<td>This course invites students to investigate the ways in which language is used in various settings. By examining how language is connected to issues of identity, students see the importance of using spoken and written communications appropriate to particular contexts. The course is structured around three main projects: a memoir where students explore their own experiences with language and identity, and two ethnographic studies where they look closely at two distinct communities, one informal and one professional, to see how people interact in those settings. The course calls for frequent informal written responses that build toward larger formal texts. Students are invited to become reflective of their writing processes as they are involved in a constant process of revising. They receive feedback from their instructor and classmates, and discuss many ideas and concepts in groups. (Offered in the fall, spring, and summer)</td>
</tr>
<tr>
<td>EN140</td>
<td>COLLEGE COMPOSITION II</td>
<td>3</td>
<td>A continuation of College Composition I, this class considers many written genres while focusing on such issues as work, social class, culture, and identity. By examining these issues through the genres of journal articles, oral history, narrative, short story, poetry, drama, and film, students will build on their abilities to work reflectively, develop their responses, and incorporate the voices of others into their own texts through the use of quotations. Students will have the opportunity to write texts similar to the ones they are reading, as well as academic essays. Through the practice of close reading and expository writing, students will develop the ability to comment on not only specific genres, but also on the world around them. They will also have the opportunity to participate in the kinds of group and presentation work that might be practiced in a professional setting. Prerequisite: EN120 (Offered in the spring and summer)</td>
</tr>
<tr>
<td>EN320</td>
<td>TECHNICAL COMMUNICATIONS</td>
<td>3</td>
<td>Principles of effective communication on both the employee and organizational levels are emphasized in this course. Students create professional written documents and there is a strong emphasis on oral communications. Through class discussions, working groups, and formal presentations, students will consider and present on various workplace scenarios. These situations will provide students the opportunity to practice negotiation, conflict management, ethical decision-making, leadership roles, and presentation skills. Professionalism in all forms of communication will be expected. (Offered in the fall and spring)</td>

</table>
ACADEMIC COURSE DESCRIPTIONS

HI110 INTRODUCTION TO US HEALTHCARE 3 CREDITS
This course provides an introduction to the multiple systems that define, describe, and shape the delivery of healthcare in the United States. Using case studies and presentations of major issues, this course will give the learner an appreciation of the dilemmas confronting policy makers, providers, and patients: how to balance cost, quality, and access. We will examine specific healthcare issues such as access and disparity, healthcare professions, facilities, managed care organizations, and government healthcare programs. We will also discuss policy changes impacting on American healthcare in the past century. (Offered in the fall and spring)

HI120 MEDICAL TERMINOLOGY 3 CREDITS
This course is designed to introduce the student to medical terms, including roots, prefixes, and suffixes, with emphasis on spelling, definition and pronunciation. This course introduces the student to the basic rules for interpreting, constructing, and spelling medical terms. Emphasis is upon learning word roots, prefixes and suffixes and how they are combined rather than learning each individual term. (Offered in the spring)

HI130 INTRODUCTION TO HEALTH INFORMATION TECHNOLOGY 4 CREDITS
This course is designed to explore the use of information systems in healthcare. Students will be introduced to the information systems and their applications in healthcare. The fundamentals of information systems, including Electronic Health Record, will be explored. Students will become familiar with information systems used for managerial and clinical support. Information security will be discussed. (Offered in the fall and spring)

HI210 ELECTRONIC HEALTH RECORDS 4 CREDITS
This course provides a practical experience with a laboratory component (utilizing the VistA for Education program) that will address approaches to assessing, selecting, and configuring Electronic Health Records to meet the specific needs of customers and end-users. In addition, this course provides an overview of the most popular vendor systems highlighting the features of each as they would relate to practical deployments, and noting differences between the systems. (Offered in the spring)

HI310 MEDICAL CODING, CLASSIFICATION AND COMMUNICATION 3 CREDITS
This course introduces students to the study and practice of procedural medical coding using ICD-9-CM and ICD-10-CM (Revisions 9 and 20 of the International Classification of Diseases), and CPT (Current Procedural Terminology). Topics include ICD and CPT coding rules, conventions, and guidelines in complex case studies. Additional topics include the investigation of government regulations and changes in healthcare reporting. (Offered in the spring)

HI330 INTRODUCTION TO HEALTHCARE DATABASES 4 CREDITS
This course introduces students to the principles of data management in the context of Health Information Technology (HIT). The emphasis is on practical database experience reinforced through assignments and weekly laboratory work. Students learn first to work with a workstation-based database system and subsequently they are introduced to the design of databases and their implementation in relational systems. Topics include tables, queries, forms, reports, importing and exporting data, structured query language, entity relationship models, the relational data model, and normalization of databases. Examples, assignments, and laboratory work are drawn from hospital and other HIT environments. (Offered in the fall)

HI410 HEALTHCARE DATABASE MANAGEMENT 4 CREDITS
This course further develops database management concepts that deal with installation of DBMS software in hospital settings. Students are given hands-on experience with building and using healthcare databases, including managing users, physical storage, and database performance. (Offered in the spring)

HI430 HEALTHCARE COMPLIANCE 3 CREDITS
This course will cover the fundamentals of healthcare compliance administration from an IT perspective. A major focus of the course will be a thorough understanding of the HIPAA privacy laws as related to the role of HIT professionals. Specific topics include network and email security as related to healthcare compliance under HIPAA. (Offered in the fall)

HI445 PROFESSIONAL EXPERIENCE (PRACTICUM) 4 CREDITS
Students are placed in a hospital information technology (or other suitable) department to gain experience in a professional working environment. Students are responsible for various assigned duties depending on the placement. (Offered in the spring)

HI450 CAPSTONE PROJECT 4 CREDITS
In this course students work in teams to design and complete a full semester project in Health Information Technology. The course will guide students in defining a complex problem and developing a workable solution. The professor will identify an array of potential project areas for student consideration, who will then be assigned an area based on preference, skills and team size. To the degree possible, students will get their top choices of project areas. (Offered in the spring)

HV101 THEORY OF HEAT 4 CREDITS
This course covers refrigeration and heat transfer. Students also develop an understanding of basic electricity principles, refrigeration, refrigerants and pressure and temperature relationships. (Offered in the fall and spring)
HV102 SAFETY TOOLS, EQUIPMENT AND SHOP PRACTICES 4 CREDITS
This portion of the program covers basic hand tools and their uses. In addition, students examine safe workshop practices, the use of vacuum pumps, charging refrigeration systems, tubing and piping, and leak detection. The course includes a 10-hour OSHA safety course. (Offered in the fall and spring)

HV103 ELECTRICITY FOR HVAC/R 3 CREDITS
A. Basic Controls: This section of the course covers basic electricity and magnetism, the use of automatic controls, components and their applications. Also, troubleshooting basics, automatic and programmable controls.
B. Electric Motors: This section of the course covers types of motors and related wiring, motor applications and problem diagnosis, troubleshooting electric motors and their controls. (Offered in the fall and spring)

HV104 EPA (ENVIRONMENTAL PROTECTION AGENCY) REGULATIONS 3 CREDITS
Recovery, Reclamation and Recycling Program: This course concentrates on Federal EPA certification test preparation, R410A certification, 10-hour OSHA Safety Certification and the use of recovery equipment. (Offered in the fall and spring)

HV201 COMMERCIAL REFRIGERATION 4 CREDITS
Students will study commercial applications of evaporators as applied to commercial refrigeration condensers and compressors, including ice machines and walk-in units. This course will also include different types of expansion devices for these applications, special refrigeration systems, troubleshooting and typical operating conditions. (Offered in the spring and summer)

HV202 AIR CONDITIONING, HEATING AND HUMIDIFICATION 4 CREDITS
This course covers electric and gas heat and oil-fired systems, hydronic systems and indoor air quality. Students will also examine rooftop units, A/C installation, air distribution, balance and controls for the operation of these systems. Typical operating conditions and troubleshooting will also be presented. (Offered in the spring and summer)

HV203 COMMERCIAL AND INDUSTRIAL AIR CONDITIONING 4 CREDITS
A. Students will study all weather systems that incorporate electric, gas-fired and oil-fired systems. Other topics will include air source and geothermal heat pumps.
B. Covered in this section will be high and low pressure chillers, absorption chill water systems, cooling towers, condensers and chill water pumps. Operation, maintenance and troubleshooting will also be covered. (Offered in the spring and summer)

HV204 ELECTRICAL CODES AND SCHEMATICS 2 CREDITS
This course introduces students to electrical blueprints used in the design and implementation of HVAC&R systems in a variety of environments. In addition, students are acquainted with current electrical code standards. We will also be focused on energy management/controls and solar thermal skills and knowledge. (Offered in the spring and summer)

MA080 FUNDAMENTAL MATHEMATICS 3 CREDITS
MA090 FUNDAMENTAL MATHEMATICS 6 CREDITS
This course is designed to reinforce the foundations of mathematics and prepare students for success in future math courses. Topics covered include fractions, mixed numbers, decimals, fraction to decimal conversion, basic rules of algebra, real numbers and operations, order of operations, linear equations. To help develop students number sense and mental arithmetic, the use of calculators will not be allowed in most instances. (Offered in the fall, spring, and summer)

MA105 TECHNICAL MATHEMATICS I 3 CREDITS
This course is designed as an overview of the math topics most often encountered in a technical environment. Practical examples of the math as it is used in the various technical fields are employed as much as possible. Topics covered include: a review of fractions and decimals, unit conversions, ratios and proportions, percentages, exponents and polynomials, graphing and geometric formulas.
Prerequisite: MA090 (grade of C or higher) or Placement Exam (Offered in the fall, spring, and summer)

MA106 TECHNICAL MATHEMATICS II 3 CREDITS
This course, the second in the technical math sequence, continues to develop the students’ mathematics knowledge through the use of practical examples. Topics covered include ratio and proportion, geometry, and right angle trigonometry. An emphasis is placed on practical examples from the automotive field and project assignments are used to refine problem solving, critical thinking and communication skills. Prerequisite: MA105 (Offered in the spring and summer)

MA107 OPTICAL MATH 3 CREDITS
Optical Math provides the Opticianry student with an opportunity to become familiarized with mathematical concepts and formulas that are commonly used in ophthalmic science. The student will be introduced to optical formulae that contain mathematical concepts involving positive and negative integers, definition of infinity, algebra; trigonometry and approximations. In addition, students will learn how to solve complex optical formulae using a scientific calculator. (Offered in the spring)
MA 115  PLANE AND SOLID GEOMETRY  4 CREDITS
This course introduces the study of Euclidean geometry, focusing on lines and angles, measurement and units, triangle properties, parallelograms, trapezoids, polygons, circles, spheres, conic sections, pyramids, areas and volumes. Applications to the field of building technology will be stressed. Prerequisite: MA105 (Offered in the fall)

MA120  COLLEGE ALGEBRA AND TRIGONOMETRY  3 CREDITS
This course begins with a review of the metric system to be applied throughout the semester. Students’ understanding of algebra is developed through methods of solving algebraic fractions, systems of linear equations and quadratic equations.

The introduction to the basics of functions and their graphs leads into the study of logarithmic and exponential functions. The course concludes with problem solving involving right triangles and an introduction to vectors. Applications from various technical fields will be used when possible. Prerequisite: MA105 (grade of C- or higher) or MA115 or Placement Exam (Offered in the fall, spring, and summer)

MA130  PRECALCULUS  3 CREDITS
This course extends the student’s knowledge of trigonometry by further exploring the trigonometric functions, including developing their graphs. The course continues by solving trigonometric equations and investigating applications of trigonometry. Complex numbers are covered in rectangular and polar coordinates. To prepare the student for calculus, properties of polynomial and rational functions are reviewed. Prerequisite: MA120 (Offered in the spring, and summer)

MA240  CALCULUS I  4 CREDITS
This course introduces differential and integral calculus. It begins with the study of limits and continuity, which naturally leads to the development of the derivative. Topics covered include, the rules of differentiation for exponential, logarithmic, trigonometric, inverse-trigonometric, and polynomial functions, rates of change, implicit differentiation, maximization/minimization problems, and an introduction to integration. Prerequisite: MA130 (Offered in the fall)

MA250  CALCULUS II  4 CREDITS
This course builds and expands upon the techniques and applications covered in Calculus I. Topics include the indefinite and definite integral, the fundamental theorem of calculus, integration by substitution, an introduction to differential equations, advanced integration techniques, area of region between two curves, parametric equations, improper integrals, applications of integration to volumes. Prerequisite: MA240 (Offered in the spring)

MA 265  FINITE MATHEMATICS  3 CREDITS
This course serves as a broad overview of topics in finite math and a brief introduction to topics in statistics. Topics covered include linear equations, linear systems, linear programming, mathematics of finance, matrix math, probability, and an introduction to statistics. Prerequisite: MA 106 (Offered in the fall)

MA270  STATISTICS  3 CREDITS
This course studies the collection, analysis and presentation of data, frequency distributions, probability and probability distributions. Making inferences from statistical data and the techniques used for making business and management decisions will be discussed. Applications to various technical fields will also be included. Data analysis and presentation make use of statistical software. Prerequisite: MA265 or MA 120 (Offered in the fall, spring and summer)

MD223  MEDICAL INSTRUMENTATION I  4 CREDITS
Study of medical devices and transducers used in Intensive Care Units and general patient floors. Covers typical circuits, applications, safe usage of devices, and interpretation of derived data. Emphasis on troubleshooting and repair techniques as applied to medical devices. Prerequisites: A GPA of 2.0 in EE110, EE122, EE131 or a waiver from the department chair. (Offered in the fall)

MD225  MEDICAL INSTRUMENTATION II  4 CREDITS
A continuation of MD223. More complex medical devices are introduced that incorporate both previously learned technologies as well as new concepts. Increased emphasis is placed on safety and equipment testing. Opportunities to use troubleshooting and repair techniques are provided. Prerequisite: MD223 (Offered in the spring)

MD238  HUMAN PHYSIOLOGY  4 CREDITS
Introduction to the basic structure and function of the various organ systems of the human body. Discussion of normal, as well as some pathological physiology. Presentation of terminology encountered in a medical environment. Examination of basic properties of nerves and muscles and their relationships with the central nervous system in producing motion and sensation. Study of various functions of the respiratory and cardiovascular systems. Introduction to instrumentation and techniques for evaluation of normal and abnormal functions. (Offered in the fall)

MD242  CLINICAL INTERNSHIP  4 CREDITS
Student is placed in a hospital clinical engineering department to gain experience in a professional working environment. Students will perform various assigned duties, some of which involve preventive maintenance or repair of medical equipment and will become familiar with equipment and specialty tools used in the biomedical field. Prerequisite: MD223 Corequisite: MD225 (Offered in the spring)
ME105 CAD WITH SOLIDWORKS 3 CREDITS
Introduction to the use of CAD systems for the production of engineering drawings through lectures and hands-on laboratory sessions. SolidWorks software is used to create basic drawings related to mechanical equipment and machine parts. Modifying existing drawings similar to those produced in mechanical engineering firms. (Offered in the fall and spring)

ME106 ADVANCED CAD 3 CREDITS
The use of SolidWorks to generate complicated 3D Assembly Models. Extensive projects given to challenge the student and extend their knowledge. Prerequisite: ME105 (Offered in the spring and summer)

ME110 STATICS 4 CREDITS
Study of fundamental concepts and principles governing the equilibrium of rigid bodies under the action of forces. Resolution and addition of forces by graphic and analytical methods, moment of a force, couples, equivalent systems of forces, analysis of trusses and frames, and distributed loads. Also, centroids and centers of gravity, and friction. Prerequisite: MA120 (Offered in the fall)

ME141 MATERIALS 3 CREDITS
The study of metals and non-metals. A basic understanding of crystal structures, heat treating, annealing, cold working and how they affect mechanical properties. Stress-strain diagrams, phase diagrams, time temperature transformation diagrams and failure analysis of engineering materials. (Offered in the spring and summer)

ME150 INTRODUCTION TO MANUFACTURING 4 CREDITS
Introduction to the basic processes related to machining and cutting engineering materials. Methods of joining both mechanical and welding, brazing, and soldering. The use of measuring instruments for the production of accurate parts. (Offered in the fall and spring)

ME151 MANUFACTURING PROCESSES AND CNC MACHINING 4 CREDITS
The study of advanced manufacturing processes such as forging, casting, forming processes, injection molding, thermo forming and composite layup. Programming and operation of CNC equipment including an introduction to Robotics. Prerequisites: ME105, ME150 (Offered in the spring and summer)

ME240 MACHINE DESIGN WITH SOLIDWORKS 4 CREDITS
The study of the fundamentals of machine design using SolidWorks. Technical drawings as a method of solving engineering problems with the use of Cosmos as an analytical tool. Prerequisites: ME106, MA120 (Offered in the spring)

ME250 ADVANCED MANUFACTURING AND CNC 4 CREDITS
Rapid prototyping is covered from concept to completed part. The use of SolidWorks models to generate CNC programs and parts. Prerequisites: ME106, ME151 (Offered in the spring)

ME252 THERMODYNAMICS 4 CREDITS
First and Second Law of Thermodynamics, thermodynamic properties of substances, reversible and irreversible processes, entropy; thermodynamic processes, power and refrigeration cycles, three modes of heat transfer, conduction, convection and radiation; heat transfer through plain surfaces and fins, in tube flow and in heat exchangers. Prerequisites: MA130, ME141. Co-requisite: ME110 (Offered in the fall)

OA111 HISTORY TAKING I 3 CREDITS
OA131 HISTORY TAKING II 1 CREDIT
These courses provide instruction and practical experience in the proper methods and procedures in conducting a comprehensive case history of the patient prior to being examined by the ophthalmologist. Students learn aspects of taking a case history and proper recording of medical information as it relates to presenting complaint and history of illness, past ocular history, family history, systemic illness, medications, allergies & drug reactions and partially sighted patients (OA121 is offered in the fall and OA122 is offered in the spring)

OA113 INSTRUMENTATION I 2 CREDITS
OA133 INSTRUMENTATION II 1 CREDIT
In these courses, students will learn how to use and care for all of the medical instruments that are used by ophthalmic assistants in evaluating the ocular health of a patient. Some of the instruments that are featured in the course curriculum include keratometer, keratometer, biomicroscope, phoropter, A-Scan biometer, opthalmoscope, retinoscope and pupilometer. (OA123 is offered in the fall and OA124 is offered in the spring)

OA114 MEDICAL ETHICS, LEGAL & REGULATORY 1 CREDIT
In this course, students will learn the legal, regulatory and medical ethical aspects as they relate to the ophthalmic profession. Among many of the topics presented are third party coding, government and institutional rules and regulations, quality assurance, ethical and legal standards, scribing, charting, confidentiality and informed consent. (Offered in the fall)
OA115  MEDICAL TERMINOLOGY AND KNOWLEDGE I  3 CREDITS
OA125  MEDICAL TERMINOLOGY AND KNOWLEDGE II  3 CREDITS
In these courses, students will learn the medical terminology and depth of knowledge associated with being an ophthalmic assistant. Topics of ocular health that are presented in this course include anatomy, physiology, systemic diseases, ocular diseases, ocular emergencies and metric conversions. (OA115 is offered in the fall and OA125 is offered in the spring)

OA116  PROFESSIONAL OBSERVATION (8 TO 16 HOURS. OBSERVATION ONLY)  1 CREDIT
In this course, students will be introduced to the many different aspects and working environments in which an ophthalmic assistant is employed. Students will be assigned a minimum of 8 hours of clinical observation during the first semester. Students will present and share their clinical experiences, using a multi-media presentation at the conclusion of the course. (Offered in the fall)

OA118  OPHTHALMIC PATIENT SERVICES & EDUCATION I  3 CREDITS
OA128  OPHTHALMIC PATIENT SERVICES & EDUCATION II  1 CREDIT
In these courses, students will learn the many specific types of services and care techniques, which ophthalmic assistants provide for their patients. In addition, students will learn patient management systems and protocol in managing their patients.
Specific topics which will be presented are patient education, surgery, systemic and ocular disease, anatomy and physiology; general & ocular, safety glasses, patient instruction, medication, tests, procedures, treatments, eye dressings, patient flow, triage, forms & manuals, legal forms for government services, vital signs, version and duction, function and anomalies, cover tests, stereoeacuity, nystagmus and CPR training. (OA118 is offered in the fall and OA128 is offered in the spring)

OA119  VISUAL FIELDS AND ASSESSMENT  1 CREDIT
In this course, students will learn how to conduct pre-testing for all forms of visual acuity and peripheral field analysis. Forms of acuity and peripheral field tests include adult and pediatric visual acuity, pinhole acuity, Amsler grid, confrontation fields and automated perimetry. (Offered in the fall)

OA129  OPHTHALMIC SKILLS  1 CREDIT
This course will present a series of basic tests and procedures that are related to an overall analysis of the patient’s general ocular health. Tests which the students will learn to perform as a result of this course include spectacle skills (transpose cylinder readings), IOL power calculations, anterior chamber depth, pachymetry, calibration of biometry instruments, tear tests, glare testing, color vision testing, A-scan, laser interferometry and tonometry. (Offered in the spring)

OA130  REFRACTOMETRY  2 CREDITS
In this course, students will learn the proper procedures and protocol in conducting a refraction of the eye. Topics presented in this course include basic optical theory, refractive error (automated), manifest refraction and basic spectacle designs & dispensing. (Offered in the spring)

OA132  IN-OFFICE SURGICAL PROCEDURES AND SURGICAL ASSISTING  1 CREDIT
In this course, students will learn the protocol and procedures that are related to assisting an ophthalmologist during in-office surgery. Types of surgical procedures, protocol and advanced technology that are presented as part of the course include instrument preparation, refractive, sterile fields, suture technique, non-refractive laser therapy, intraocular injections, Yag laser, site identification and laser safety. (Offered in the spring)

OA136  OCULAR IMAGING  2 CREDITS
In this course, students will learn the art of ocular photography as a means to diagnose ocular abnormalities and diseases. Photographic ocular equipment that will be introduced to the student includes the slit lamp and anterior segment photography, fundus photography, external photography, A-scan, corneal topography and scanning laser tests for glaucoma and retinal diseases. (Offered in the spring)

OA137  OCULAR PHARMACOLOGY  1 CREDIT
This course offers students a comprehensive curriculum of ocular pharmacology. Students will learn how to identify ocular medications, instill medications, and educate the patient on medication and their drug-related reactions. (Offered in the spring)

OA140  CLINICAL EXTERNSHIP  2 CREDITS (60 TO 120 HOURS)
During the second semester, students in good academic and financial standing will be placed in a 60- to 120-hour externship, as part of the graduate requirements for the program. The one year certificate for Ophthalmic Assisting will be granted upon successful completion of the clinical assignment. (Offered in the spring)

OP105  ANATOMY AND PHYSIOLOGY OF THE EYE  3 CREDITS
This course is designed to give the opticianry student an insight into the anatomical structure of the eye and its adnexa. The student will also learn the function of the parts of the eye as they relate to vision, eyewear, and contact lenses. The learner will be presented with common pathologies of the eye and ocular pharmacology. (Offered in the fall and spring)

OP110  OPHTHALMIC OPTICS I  3 CREDITS
This course is a three-hour lecture course designed to include a brief history of glass and plastic, the various sphere, cylinder, and prism powers, review of the optical cross, flat and toric transposition, history and types of multifocals, and the lens aberrations. (Offered in the fall and spring)
OP 115 PRINCIPLES AND PRACTICES IN OPTICIANRY I 3 CREDITS
The lab portion of this course will introduce the student to terms, instruments, equipment, lenses and materials to be used in the surfacing and finishing of ophthalmic prescription eyewear. Special emphasis will be placed on the procedures used to surface ophthalmic lenses including calculations, layout, blocking, generating, fitting, polishing and inspection.

The clinical portion of this course will offer students an opportunity to gain real life exposure to the designing, fitting and dispensing of prescription eyewear in an optical business setting. The students will learn to operate an optical business, as well as the intricacy of quality patient care.

The Optical Shoppe is open during the regular academic year and is operated by the students under the direct supervision of licensed opticians. The operating clinic offers students the opportunity to learn the practical aspects of opticianry through weekly presentations and assignments, as well as actual patient care. (Offered in the fall and summer)

OP 120 OPHTHALMIC OPTICS II 3 CREDITS
This course is a lecture course designed as a continuation of Ophthalmic Optics I. It will include refraction, image jump, vertical imbalance using charts, correction of small amounts of vertical imbalance, sagittal values, and center and edge thickness based upon vertex depth, specular images, and lens aberrations. (Offered in the spring and summer)

OP 122 OPHTHALMIC DESIGN & DISPENSING THEORY I 3 CREDITS
This course is designed to introduce the student to the dispensing procedures. This course is designed to instruct the student in the process for ordering an Rx from the lab, the insertion and removal of lenses from frames and mountings, the alignment and adjustment of the frames and mountings for standard alignment and for the client’s face. The lab portion of the course is designed to introduce the student to the practical dispensing of optical products. Practical topics covered in the course include the neutralization of single vision and multifocal lenses for duplication of an Rx, measurement of frames and mountings, measurements of pupillary distance (PD’s), and the demonstration and calculation of the placement of multifocal segments. (Offered in the fall)

OP 125 PRINCIPLES AND PRACTICES IN OPTICIANRY II 3 CREDITS
This course will consist of lectures, demonstrations, and practice time to develop skills in the fabrication of single vision eyewear. It will include surfacing procedures, the use of the lensmeter for verification and the layout of single vision lenses for edging. Blocking, automatic edging, hand beveling, lens tempering, lens insertion, pattern making, and machinery maintenance will also be covered.

The clinical portion of this course will offer students an opportunity to gain real life exposure to the designing, fitting and dispensing of prescription eyewear in an optical business setting. The students will learn to operate an optical business, as well as the intricacy of quality patient care.

The Optical Shoppe is open during the regular academic year and is operated by the students under the direct supervision of licensed opticians. The operating clinic offers students the opportunity to learn the practical aspects of opticianry through weekly presentations and assignments, as well as actual patient care. (Offered in the spring and summer)

OP 128 LOW VISION DISPENSING 2 CREDITS
Students will explore the most common forms of vision loss and their cause. In addition, students will develop first-hand experience as to vision impairment through the use of vision impairment simulators and exercises. Students will also learn proper conduct and professional guidance as a sighted guide for the visually impaired. (Offered in the spring)

OP 230 CONTACT LENS THEORY I 3 CREDITS
This course is designed as an introduction to the fitting of rigid and soft contact lenses. It will include terminology, instrumentation for the fitting of contact lenses, the development and history of lenses, patient selection, and the assessment of the fit.

The lab portion of the course is designed to introduce the student to the handling of contact lens materials and the operation and maintenance of instruments used in the fitting and designing of contact lenses. Primary instruments that students will be operating include a keratometer, measuring loupe, lensmeter, phoroptor, biomicroscope, radioscope, and corneal topographer. (Offered in the fall)
OP232 OPTHALMIC DESIGN & DISPENSING II 3 CREDITS
OP233 OPTHALMIC DESIGN & DISPENSING II LAB 1 CREDIT
This course is a hybrid course in which a portion of the course (approximately 75%) is offered as distance learning, and another portion meets physically on campus (approximately 25%). Ideally, student will engage in weekly distance learning sessions and assignments, a weekly on-campus lab for a practical quiz and/or assignment, and a monthly regular on-campus lecture session.
The course is designed to further explore topics learned in Ophthalmic Design & Dispensing I and Ophthalmic Design & Dispensing Lab I. Students will review frame alignment and adjustments, techniques for fitting multifocals, and lens identification. The course will expand into troubleshooting of visual problems, repairing of frames, applying safety standards in the optical workplace and lifestyle dispensing. Students will become familiar with progressive lenses, lens options / coatings, and the techniques for ordering lenses, frames and optical supplies. The lab portion of the course is designed to further explore topics learned in Ophthalmic Design & Dispensing I and Ophthalmic Design & Dispensing II. Students will review frame alignment and adjustments, techniques for fitting multifocals, and lens identification. The course will expand into troubleshooting of visual problems, repairing of frames, applying safety standards in the optical workplace and lifestyle dispensing. Students will become familiar with progressive lenses, lens options / coatings, and the techniques for ordering lenses, frames and optical supplies. (Offered in the spring)

OP235 PRINCIPLES AND PRACTICES IN OPTICIANS III 3 CREDITS
In this progression course, students will be able to hone and perfect the lab finishing skills in the fabrication of prescription eye wear. Students will learn the advances in spectacle finishing and manufacturing. Students will be expected to complete lab assignments which contain multiple jobs of varying levels of difficulty within a timed period. Students will also learn to work as a team as the finishing lab is turned into a wholesale production facility.
The clinical portion of this course will offer students an opportunity to gain real life exposure to the designing, fitting and dispensing of prescription eyewear in an optical business setting. The students will learn to operate an optical business, as well as the intricacy of quality patient care.
The Optical Shoppe is open during the regular academic year and is operated by the students under the direct supervision of licensed opticians. The operating clinic offers students the opportunity to learn the practical aspects of opticianry through weekly presentations and assignments, as well as actual patient care. (Offered in the fall)

OP240 CONTACT LENS THEORY II 3 CREDITS
OP241 CONTACT LENS THEORY II LAB 1 CREDIT
This course is a continuation of Contact Lens Theory I, emphasizing contact lens verification, dispensing, and follow-up care. The fitting of astigmatic, presbyopic, and special needs patients will also be covered. The lab portion of the course is a continuation of Contact Lens Lab I emphasizing contact lens verification, dispensing, and follow-up care. The fitting of astigmatic, presbyopic, and special needs patients will also be covered.
The lab portion of the course is designed to introduce advanced levels of clinical instrumentation and their use in determining the proper contact lens fit on the eye. Students will also be able to refine and hone their expertise in the handling of contact lens materials and the operation and maintenance of instruments used in the fitting and design of contact lenses. Primary instruments that students will be operating include a keratometer, measuring boppe, lensmeter, phoroptor, biomicroscope, radioscope, and corneal topographer. (Offered in the spring)

OP243 PRINCIPLES AND PRACTICES IN OPTICIANS IV 3 CREDITS
This course is designed to educate students in the technical skills of performing various procedures within the ophthalmic visual assessment area of a dispensary. The course will present technical equipment procedures, maintenance and use, as well as the skills needed in assisting Optometrists and patients with various procedures such as administering medicines and pharmacology identification and uses.
The clinical portion of this course will offer students an opportunity to gain real life exposure to the designing, fitting and dispensing of prescription eyewear in an optical business setting. The students will learn to operate an optical business, as well as the intricacy of quality patient care.
The Optical Shoppe is open during the regular academic year and is operated by the students under the direct supervision of licensed opticians. The operating clinic offers students the opportunity to learn the practical aspects of opticianry through weekly presentations and assignments, as well as actual patient care. (Offered in the spring)

OP245 VISION ASSESSMENT 3 CREDITS
This course is designed to instruct the student in the theories behind the various tests given during a routine refraction. Topics include anatomy and physiology of the eye (review), mechanics of ametropia, epidemiology and etiology of refractive errors. Trends in visual acuity and accommodative / convergence relationships in the myopic, hyperopic and presbyopic eye will be discussed. Also included will be problems in binocular vision and retinoscopy. (Offered in the spring)
OP 281  OPTICIANRY TECHNICAL SKILLS AND SERVICE LAB 1  1 CREDIT
OP 282  OPTICIANRY TECHNICAL SKILLS AND SERVICE LAB 2  1 CREDIT

The topics of this course are designed to introduce the opticianry student to current and relevant issues related to public health and aspects of clinical care. Students will develop an awareness and identify areas of the community that are in need of optical care. The course presents students with the tangible opportunity to learn from community involvement and helping to engage and address areas of social, ethical, economic and policy-limiting concerns within our own environment. Students will engage in several aspects of service learning projects and professional inter-disciplanry presentations.

Clinical patient care offers students an opportunity to rotate among a variety of opticianry businesses. Students will begin to gain real life exposure to the opticianry industry, which will ultimately allow them to better understand client service and management, as well as allow them to explore different career paths.

Assigned research and professional presentation projects offer students an opportunity to explore optical health issues related to eye health and their many possible developing solutions based upon advanced ocular health procedures and treatments. Assigned projects may also include collaborative research and presentation with students from optometry in order to promote interdisciplinary professional problem solving and eye care that is routinely practiced throughout the profession.

The course is designed to fully support the College mission of community service learning. Students will be evaluated on the successful completion of two projects: a community based service learning project where students engage in providing clinical care to a worthwhile organization event, project or population.

The poster project is an education awareness campaign designed to educate the public as to a particular segment of “Healthy Sight For Life”. The project will be presented and displayed at the end of the academic year at a college wide vision health fair as a poster session. Presentations are judged in a competitive format during the Vision Health fair by optical experts representing the profession. (OP281 is offered in the fall and OP282 is offered in the spring)

PE 101  ELECTRICAL CODE I  5 CREDITS

A study of the requirements of the National and Massachusetts Electrical Codes, including the applications of overcurrent devices, switches, conductors, conductor identification and the practical safeguarding of persons and property with respect to the installation of general wiring methods. Included in the course is a practical application of the requirements of the National and Massachusetts Electrical Codes as applied to residential wiring. During this lab experience students will be instructed in the design and configuration of common switching circuits, control circuits, and installation of electrical services while utilizing wiring methods common to residential installations. Training in the use of electrical tools, along with the testing and troubleshooting of basic electrical circuits are included. (Offered in the spring (evenings))

PE 103  ELECTRICAL CIRCUIT THEORY  5 CREDITS

A study of the concepts of voltage, current, resistance, and electrical power as applied to common DC and sinusoidal AC circuits. Topics covered are Ohm’s Law, series, parallel, and combination circuits. Other topics include magnetism, AC waveforms, inductance, capacitance, reactance, and impedance, along with phases and RC, RL and RLC circuits. Included with this course is a laboratory component that provides the student an opportunity to visually analyze the practicable application of those principles discussed in lecture. Students will assemble Direct and Alternating Current series, parallel and combination circuits comprised of resistive, inductive and capacitive loading components. The assigned lab experiments will provide the student an opportunity to clarify the various fundamentals of power distribution and the relationship of voltage, current, power, power factor and phase relationships commonly experienced in today’s electrical systems. (Offered in the spring (evenings))

PE 201  ELECTRICAL CODE II  5 CREDITS

A continuation of study of the National and Massachusetts Electrical Code, including wiring methods for commercial construction, branch circuits, feeders, branch circuit and feeder calculations, services, and grounding. Included with this course is a practical application of the requirements of the National and Massachusetts Electrical Codes as applied to commercial construction. During this lab experience students will be instructed in the design and configuration of more complex switching circuits, control circuits, and installation of electrical services while utilizing wiring methods common to Commercial installations. Training in the use of electrical tools, along with the testing and troubleshooting of more complex electrical circuits. Prerequisite PE 101 (Offered in the summer (evenings))

PE 203  ELECTRICAL MACHINERY  5 CREDITS

Advance coverage on AC circuits and power factor. A study of the theory of polyphase circuits, single and three phase transformers, rotating electrical machinery, machine characteristics, and practical control of machines. Included with this course is a laboratory component that provides an opportunity for students to visually analyze the application of those principles discussed in lecture. Students will connect and operate direct current motors and generators, alternating current transformers, motors and generators, and monitor their operation under simulated load. The lab experiments will provide the student an opportunity to observe the various fundamentals of power distribution and the effects of various reactive loads on the operation of transformers, generators, AC motors and motor control circuits. Prerequisite PE 103 (Offered in the summer (evenings))
ACADEMIC COURSE DESCRIPTIONS

PE211  ELECTRICAL CODE III  5 CREDITS
Continued study of the National and Massachusetts Electrical Codes with emphasis on advanced topics, including hazardous locations and requirements for special occupancies. Other topics may include requirements for Photovoltaic installations, motor and motor control installations, motor load calculations, and principles of grounding systems and equipment. Included in this course is a laboratory component that provides a practical application of the requirements of the National and Massachusetts Electrical Codes as applied to the topics discussed in lecture. Prerequisite: PE201 (Offered in the fall) (Evenings)

PE213  LOW VOLTAGE SYSTEMS  3 CREDITS
Topics include communications, data, fiber optic, audio, fire warnings and security systems. Study will focus on the application of the current National and Massachusetts Electrical Codes as they pertain to these systems. Prerequisite: PE203 (Offered in the fall)

PH102  PHYSICS  3 CREDITS
This course is an introduction to the physics of mechanics and basic concepts in chemistry, including the study of motion, Newton’s Laws, energy, conservation laws, physics of matter, temperature, heat transfer, the atom, the periodic table, chemical bonding, the mole, and balancing chemical equations. (Offered in the spring and summer)

PH212  PHYSICS I  3 CREDITS
This course is an algebra-based introduction to the physics of mechanics that includes a math review (algebra, geometry and trigonometry), scalars and vectors, force, mass, equilibrium, torque, acceleration, gravity, Newton’s laws, work, energy, power, impulse, momentum, circular motion and rotation of rigid bodies. Prerequisite: MA115 or MA220. Co-requisite: PH215 (Offered in the fall and spring)

PH215  PHYSICS LAB I  1 CREDIT
This course focuses on supporting the topics in the physics lectures, PH212 and PH215. This course offers the opportunity to practice laboratory techniques, data collection, and written reports. Topics include kinematics and mechanics. (Offered in the fall and spring)

PH222  UNIVERSITY PHYSICS I  3 CREDITS
This course is a calculus-based approach to the physics of mechanics. The topics include scalars, vectors, and up to vector calculus; the kinematics of translation; force, mass and dynamics of translation; statics, equilibrium, and torque; angular quantities and dynamics of rotation; friction, work, energy and power; impulse and momentum; simple harmonic motion and oscillations; Universal Law of Gravitation; the mechanics of solids and fluids; wave motion and wave equations; sound including Doppler Effect; superposition principle. A math review is not included. Co-requisite: MA240 and PH225 (Offered in the fall)

PH223  UNIVERSITY PHYSICS II  3 CREDITS
This course is a calculus-based approach to the physics of thermodynamics, waves, electricity and magnetism. The topics include the study of fluids and fluid dynamics, harmonic motion and wave phenomena, thermodynamics and heat, and electricity and magnetism. Prerequisite: PH222. Co-requisite: PH225 (Offered in the spring)

PH225  PHYSICS LAB II  1 CREDIT
This lab focuses on supporting the topics in the physics lectures for PH222. This lab offers the opportunity to practice laboratory techniques, data collection, and written reports. Topics include: mechanics, thermodynamics, harmonic motion, electric charge, and optics. Prerequisite: PH225 (Offered in the fall)

PL101  PLUMBING CODING TIER I  3 CREDITS
The plumbing program is designed and aligned with the State 5-tier code requirement and also the State Continuing Education code requirements. The certificate consists of 110 class hours per tier. Each tier takes approximately five months to complete. Students are responsible for their own code books.

SK 095  FRANKLIN SEMINAR  1 CREDIT
The Franklin Seminar is designed to enhance your college experience at Benjamin Franklin Institute of Technology. This course will assist students in the transition from high school to college by using critical thinking skills and developing the capability to take ownership of their academic path through small group activity, hands on guidance and support, and peer-to-peer interaction. Students will learn about campus resources, academic success strategies, and lifelong learning techniques to help students succeed in the remainder of their academic career and beyond. In addition, students will be given individualized tutoring support to guide students in maneuvering college level course work. (Offered fall and spring)

SK 096  FRANKLIN SEMINAR II  1 CREDIT
The Franklin Seminar II is designed to assist students in the transition from the Department of Academic Development into major. Students will use the critical thinking skills, campus resources, academic success strategies, and lifelong learning techniques developed in the Franklin Seminar to continue academic learning. Students will utilize individualized tutoring support to maintain sound study habits and work towards successful academic achievement. (Offered fall and spring)
SK 100  ACADEMIC ACHIEVEMENT SEMINAR  1 CREDIT
The Academic Achievement Seminar is designed to support and enhance academic endeavors as students reenter courses at Benjamin Franklin Institute of Technology. This course will teach students how to claim their education. Students will learn how to utilize campus resources, academic success strategies, and lifelong learning techniques that will prepare you to achieve success in your present and future academic career. The elements of professionalism: time management, accountability, teamwork, workplace ethics, and active participation in learning, will be strongly emphasized and put into practice. This course will also provide individualized tutoring support to reestablish strong study habits. (Offered fall and spring)

SS105  TWENTIETH CENTURY HISTORY  3 CREDITS
A concentration on major world events including significant social, economic and political shifts and changes viewed through various media including film, fiction, historical articles and non-fiction essays. Through discussions, written responses, presentations and creative projects, students will not only engage in historical studies, but will also use analytical and critical thinking skills to consider the ethical implications of historical events and to determine how accurately history is recorded, taught and represented in education, art, politics, the media and society.

SS109  TECHNOLOGY AND SOCIETY  3 CREDITS
This course examines the role of technology in contemporary social life. An overview of technological evolution and its impact on society from the Industrial Revolution to the present is explored, with emphasis on current technologies and the debates surrounding them. Through discussion, papers, projects, and presentations, students explore the impact of particular technologies on various aspects of human life, including society's increasing reliance on technology and the consequences on human existence.

SS115  INTRODUCTION TO PSYCHOLOGY  3 CREDITS
A basic course introducing the major content areas of psychology as a scientific study of human behavior and mental processes through an acquaintance with the fundamental process of human behavior. Topics include: the nature of psychology, biological processes, human development, individual differences, personality and mental health.

SS135  INTRODUCTION TO ANTHROPOLOGY  3 CREDITS
An introductory course that studies human cultures across time and place in their various environmental and historical contexts. The majority of the course focuses on cultural anthropology, and the evolution and development of human societies. Some topics explored might be community, kinship, religion, economic structure, and political order. In addition, the ways in which culture shapes experience is discussed, and students will be called to recognize their role as both creators and byproducts of culture.

SS205/SS405  CONTEMPORARY SOCIAL ISSUES  3 CREDITS
This course analyzes, in both empirical and theoretical terms, many of the social problems currently facing Americans. Among these are deepening inequality and poverty among working and middle-class Americans, particularly racial minorities, women, and youth; related problems of racism and sexism; growing unemployment; deterioration of the health system; crime; and war and militarism. Strategies and political options for solving these problems are considered. Through additional coursework, BS students learn to practice enhanced critical thinking, especially through analyzing arguments, and to produce research-driven writing and projects to help understand the importance of awareness in addressing social issues.

SS215  RACE, CLASS, AND GENDER  3 CREDITS
This course will provide an analysis of society based on the interrelationships between these three factors and their influence on our social structure and behavior. There will be special focus on the ways in which any type of minority status impacts the social experience and the definition of personal and cultural roles. Both historical and contemporary perspectives will be explored through selected articles and films. Prepared and thoughtful discussion will be integral to the student’s experience.

SS233  FILM AND SOCIETY  3 CREDITS
Through the analysis of film and television as a text, this course explores social issues such as race, class, gender, politics, education, religion, social and historical change, and considers the ways film affects and is affected by society and social behavior. Students will reflect on the connections between film and society through in-depth discussions, presentations, readings, written responses, and research.

SS235  FINANCIAL PLANNING AND PRINCIPLES  3 CREDITS
This course provides a framework for personal financial planning through the study of economic principles including emphasis on the current economy and its effects on the individual and society as a whole. Through discussions, projects, and presentations, students will gain an understanding of principles such as budgeting, credit and debt, and processes such as mortgages and retirement planning.

SS245  PHOTOGRAPHY AND THE HUMAN CONDITION  3 CREDITS
This course provides students with a general introduction to photography as an art form and reflection of the human condition. In this course, students will study the history of photography, famous photographers and photographs, photographs as a record of their subject, and also the artistic value of photographs. Students will explore various photographs to consider not only their aesthetic value, but also the relationships between artist, subject, and audience, as well as the social, historical, and cultural significance of these images. Students will pay particular attention to the stories photographs tell, from their subject matter to the way they are composed. Students will consider these stories when viewing and also when taking photographs, telling stories of their own.
SS250  PSYCHOLOGY OF LEADERSHIP  3 CREDITS
Drawing on psychological research at the level of the individual, group, and organization, the class focuses on how leaders think, feel, and behave. This course provides an opportunity for students to learn and discuss leadership theories, and to develop a personal leadership philosophy. Topics include visionary leadership, leadership development, goal setting, ethics, storytelling, charisma, systems thinking, and crucial experiences.

SS255  SELECT TOPICS IN PSYCHOLOGY  3 CREDITS
An exploration of the ways in which human behavior and mental processes relate to everyday life. Basic concepts of psychology are introduced with special emphasis on their application to the students’ understanding of themselves and their interactions with others.

SS260  POSITIVE PSYCHOLOGY  3 CREDITS
Psychology is the study of cognitions, emotions, and behavior. This course is designed to provide a basic understanding of psychology, what we have learned about ourselves, and how psychology is applied to help improve our lives. The course focuses on the psychological aspects of a fulfilling and flourishing life. Psychology has often focused on deficits and disability. Recently, however, more focus has been placed on the more positive aspects of life. This course focuses on each person’s unique potential for positive growth and development. Topics include happiness, self-esteem, empathy, friendship, goal setting, love, achievement, creativity, mindfulness, spirituality, and humor.

SS265  EXPLORING ETHICAL ISSUES  3 CREDITS
This course invites students to explore specific ethical dilemmas that arise in societal and professional settings and to consider how to approach and resolve these issues. Students have the opportunity to develop their abilities to reason and debate scenarios involving ethical questions. By developing practical models for thinking and refining techniques of approaching ethical dilemmas, students will pay particular attention to issues that arise in social and industrial settings.

SS309  SUSTAINABILITY AND THE HUMAN CONDITION  3 CREDITS
Through study of films, readings, websites and political policy, students will explore principles of sustainability with emphasis on how to meet human needs and reduce hunger and poverty while maintaining the life-support systems of the planet. Focus will be placed on discovering real ways that individuals, organizations, and governments can manage resources in a responsible manner, with minimal impact on the earth and its inhabitants. Discussion of solutions will include technological innovation, government and corporate policy, community organizations and individual advocacy.

SS315  THE IMPACT OF THE AUTOMOBILE ON AMERICAN CULTURE  3 CREDITS
Few inventions have redefined American life quite as dramatically as the automobile; it created new concepts of work and leisure, brought all Americans closer together, changed the shape of our cities and country, and even altered our understanding of “freedom” itself. This course will explore representations of the automobile’s role in American culture through various media, including text, film, and music, culminating in a major research project on an aspect of the automobile’s influence on American life.

SS330  LEGAL AND ETHICAL ISSUES IN HEALTH IT  3 CREDITS
This course introduces the student to the study of legal and ethical principles related to patient care and health information; legal terminology and procedures; court systems; and liability of health care providers. Legal requirements governing policies designed to safeguard and maintain health information, including how to appropriately respond to requests for patient specific information will be explored. Students will explore ethical issues and apply a decision making model to selected case studies.

SS335  CURRENT ISSUES IN HEALTH CARE  3 CREDITS
The aim of this course is to explore current topics in health care with a focus on the U.S. health care system, its components, and the policy challenges created by the organization of this system. Special attention is given to health policy in the context of the current health care reform efforts, their impact on major health policy institutions and important issues that cut across these institutions.

TS201  ENVIRONMENTAL SCIENCE  3 CREDITS
An introduction to general science and 21st century issues faced. Topics include earth’s systems and resources, water and land use, the living world, population and pollution. The course focuses on energy resources and consumption as a prerequisite to the study of photovoltaics and renewable energies. (Offered in the fall)

TS240  HUMAN ANATOMY AND PHYSIOLOGY  3 CREDITS
This course is an introduction to the basic structure and function of the various organ systems of the human body. Topics include normal versus pathological anatomy and physiology, examination of basic properties of nerves and muscles and their relationships to the central nervous system, and study of various functions of the respiratory, cardiovascular, digestive and urinary systems. (Offered in the fall)

TS242  PATHOPHYSIOLOGY AND PHARMACOLOGY  3 CREDITS
This course introduces students to the principles of human pathophysiology and drug action. The basic mechanisms of organ function in disease are presented and analyzed, and strategies for designing drug-based therapeutic interventions are explored. The course is organized around seven exemplary areas of human physiology and disease mechanisms and the therapeutic strategies used to intervene in human disease pathways. (Offered in the spring)
TS310  GENERAL CHEMISTRY  4 CREDITS
Introduction to the fundamental principles of chemistry including atomic structure, stoichiometry, the periodic table of the elements, chemical bonding, molecular structure, and states of matter based on kinetic theory. Laboratory work presents an introduction to methods of quantitative chemical techniques. (Offered in the fall)
Faculty

**Tracey Arvin, Associate Professor of Electrical Technology**
Chair, Electrical Technology Department; B.A. in Liberal Studies, Framingham State College, B.S. in Geological Science, Salem State College; M.S. in Geology and Geophysics, Boston College; Journeyman Electrician and Master Electrician

**Richard Azzi, Associate Professor of Computer Technology**
B.S. in Computer Science, Mathematics, and Chemistry, University of Texas Pan American; M.S. in Mathematics, Texas Tech University

**Sharon Bank, Professor, Director of Library Services**
B.A. in Journalism, University of Rhode Island; B.A. in Political Science, University of Rhode Island; M.L.S., University of Rhode Island

**Michael Bosco, Lecturer in Technology Business and Management**
Department Coordinator, Technology Business and Management program, A.S. in Financial Services Management, Johnson & Wales University, B.S. in Management, Johnson & Wales University, M.Ed. in Educational Foundations, Curry College

**Donald Broza, Assistant Professor of HVAC&R Technology**
Department Chair, HVAC&R, Graduate, Peterson School of Steam Engineering, Graduate, Northeast Technical Institute and Associated Technical Institute, Massachusetts licenses in Refrigeration, Oil Burners, and Sprinklers; Unversally Certified by EPA in Refrigerant, Recycling, and Recovery

**Richard E. Cadotte, Assistant Professor of Automotive Technology,**
Certificate in Vocational Education, Commonwealth of Massachusetts; ASE Certified Automotive Technician, ASE Certified L-1: Advanced Level Engine Performance

**Jackie Cornog, Professor of Humanities and Social Sciences**
Co-Chair, Humanities and Social Science Department. B.A. in English and Women’s Studies, University of Massachusetts Boston, M.A. in English in Composition and Creative Writing, University of Massachusetts Boston

**John Cosimini, Assistant Professor of Automotive Technology**
A.S. in Automotive Technology, Franklin Institute of Boston, ASE Master Certified Automotive Technician, ASE Certified L-1 Advanced Level Engine Performance Technician, Massachusetts Registered Emissions Repair Technician, Member SAE

**Thomas DeCosta, Instructor of Electrical Technology**
Certificate of Electrical Technology, Old Colony Regional Vocational Technical High School, Licensed Journeyman Electrician and Certified Wiring Inspector, Commonwealth of Massachusetts, Licensed Master Electrician, State of Rhode Island

**James Delatt, Instructor of Automotive Technology**
B.S. in Vocational Education, Fitchburg State College; M.Ed. in Occupational Education Administration, Fitchburg State College; M.Ed. in Instructional Design, University of Massachusetts Boston; Certificate of Proficiency in Automotive Technology, Franklin Institute of Boston, ASE Certified Automotive Technician

**Gerald Elysee, Assistant Professor of Health Information Technology**
Program Coordinator, Health Information Technology programs. B.S. in Physical Science, St. John’s University; B.Eng. in Electrical Engineering, Pratt Institute, M.S. in Management, Lesley University; Ph.D. in Organization & Management with a specialization in Information Technology Management, Capella University

**Ray Garber, Assistant Professor of Mechanical Engineering Technology**
B.S. in Electrical Engineering, St. Cloud State

**James J. Giuurra, Associate Professor of Electronic and Biomedical Engineering Technology**
Chair, Electronic Engineering Technology and Biomedical Engineering Technology Department. B.A. in Physics, State University of New York at Geneseo; M.S. in Electrical Engineering and Computer Science, University of Illinois at Chicago

**Joseph Golden, Associate Professor of Automotive Technology**
Certificate in Vocational Education, Commonwealth of Massachusetts; ASE Certified Automotive Technician, Massachusetts Motor Vehicle Safety/Emissions Inspector; Member SAE

**Michael Grigalevich, Assistant Professor in Humanities and Social Sciences**
B.A. in English, Rhode Island College; M.A. in English, University of Connecticut

**David Hogan, Lecturer in HVAC&R**
Licensed 3rd Class Engineer, Licensed Refrigeration Technician, Unversally Certified in Section 608, Wastewater Treatment Plant License

**Moizgan Hosseinpour, Professor of Electronic and Biomedical Engineering Technology**
B.S. in Electrical Engineering, Boston University
James Johnson, Assistant Professor of Mathematics and Physics
Chair, Mathematics and Physics; B.S. in Mathematics, Ohio University; M.A. in Mathematics, University of Colorado

Kathleen Keleher, Instructor, Instructional Technology Librarian
B.A. in Theater, Antioch College; M.L.I.S., Simmons College

Eric Larsen, Assistant Professor of Building Technology and Design
Chair, Building Technology; Bachelors of Architecture, Boston Architectural College; Registered Architect: MA, RI and NH, CDT, LEED AP, GAGP

Marianne Lepp, Assistant Professor of Computer Technology
Ph.D. in Mathematics, Minor in Computer Science, University of Wisconsin

Alfonso Joel Martinez, Lecturer in Mathematics and Physics
B.A. in Mathematics, University of Colorado; B.A. in Physics, University of Colorado; PhD in Physics, University of California-Santa Cruz

Rachelle Mathurin, Lecturer, Department of Academic Development
M.Ed. in International Education Policy, Harvard Graduate School of Education; B.S. in Education Studies, Berea College

Teresa McClure, Instructor of Mathematics and Physics
B.A. in Mathematics, University of New Hampshire; M.S. in Applied Mathematics, University of Delaware

Margaret McParland, Lecturer of Mathematics and Physics
B.S. in Accountancy, George Washington University; M.A. in Critical and Creative Thinking, University of Massachusetts Boston

Catherine Mount, Instructor of Mathematics and Physics
B.A. in Physics, Smith College; M.S. in Physics, Washington State University

Todd Natti, Lecturer in Humanities and Social Sciences
B.A. in English and Comparative Language, University of Buffalo; M.A in Critical and Creative Writing, University of Sussex

Jose Ortiz, Instructor of Automotive Technology
Certificate in Automotive Technology, Universal Technical Institute; ASE Certified Automotive Technician

Scott Ouellette, Associate Professor of Automotive Technology
B.S. in Business Management, Salem State; ASE Master Certified Automobile Technician; ASE Certified L-1 Technician

Charlie Palmieri, Instructor of Electrical Technology

David Post, Professor of Mechanical Engineering Technology and Physics
B.S. in Mechanical Engineering; M.S. in Mechanical Engineering; Northeastern University, Registered Professional Mechanical Engineer

Sarah Poulette, Instructor of Humanities and Social Sciences
B.A. in English, Colgate University; M.A. in English, Boston College

Tiffany Probasco, Assistant Professor, Department of Academic Development
B.A. of Spanish, Florida State University; M.S. of Adult and Organizational Learning, Suffolk University; ITC International TEFL Certificate, Barcelona, Spain

David Protano, Associate Professor of Automotive Technology
Chair, Automotive Technology Department; B.S. in Business Management, Nichols College; ASE Certified Automobile Technician; ASE Certified Parts Specialist; Massachusetts Motor Vehicle Safety/Emissions Inspector, Member SAE

Chris Ringer, Lecturer in Mathematics and Physics
B.S. in Environmental Engineering, California Polytechnic University San Luis Obispo; M.S. in Environmental Engineering, University of Colorado

Michael Racina, Assistant Professor of Building Technology and Design
Bachelors of Architecture, Boston Architectural College; National Council of Architectural Registration Boards

Larson Rogers, Assistant Professor of Computer Technology
Chair, Computer Technology Department; B.S. (Hon.) in Physics, University of British Columbia; B.Ed. In Secondary Physics, Mathematics, and Information Technology, University of British Columbia; Ph.D. in Science Education, University of British Columbia

Tanya Rogers, Associate Professor, Department of Academic Development
Chair, Department of Academic Development; B.A. in Communications and Political Science, Regis College; M.A. in Twentieth Century Literature, University of London, Goldsmith’s College
